Condition of Applications Under Examination at Close of Business June 18, 1948

(Total number of applications awaiting action, excluding Trade-Mark Division, 155,945; Trade-Mark Division, 41,000. Oldest new case, June 13, 1946; oldest amended, April 12, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	Oct. 7	Aug. 3	2,935
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	Aug. 15	June 10	4,004
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†Sept. 19	†July 2	1,544
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Oct. 5	Dec. 7	3,785
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Music; Acoustics; Sound Recording; Knotters; Buckles, Buttons, Clasps.	Aug. 21	June 13	1,860
6. SURLE, H., Carbon Chemistry (part)	†Aug. 1	†June 21	1,530
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†Aug. 19	†May 10	1,777
8. IMUS, A. E., Furniture; Racks and Cabinets	Sept. 11	July 3	4,303
9. BENSON, R. B., Pumps and Fans: Fluid and Fluid-Current Motors	†Mar. 1	June 7	2,249
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Mystic; Modulators; Piezo-electric Crystals.	†Sept. 23	†July 21	1,710
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†Aug. 22	†Oct. 9	712
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	Oct. 16	July 26	2,077
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	Aug. 7	July 19	2,518
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Sept. 17	†June 9	1,258
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	†Feb. 17	July 25	2,065
16. LOVEWELL, N. N., Television; Telephony	†Sept. 5	†Jan. 30	1,603
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	Dec. 5	Aug. 12	2,016
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	†Jan. 18	July 19	1,946
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	†Mar. 6	Oct. 19	1,768
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	†Jan. 7	Nov. 1	1,987
21. MADER, R. C., Textiles	†July 25	†June 10	1,204
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	†May 15	Aug. 1	1,796
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	Dec. 11	July 11	1,361
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	†July 5	†July 15	2,543
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†July 19	Sept. 24	1,751
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Sept. 20	Oct. 24	1,423
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	†Apr. 3	Oct. 22	3,325
28. SOLYOM, H. L., Heating; Metallurgical Apparatus; Internal-Combustion Engines (part); Cylinders; Pistons.	†Apr. 14	†May 10	1,133
29. SHKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	Dec. 20	July 23	3,125
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Illumination; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Sept. 18	†Mar. 10	2,467
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†Sept. 24	†Sept. 25	2,160
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	Dec. 21	June 27	3,146
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements.	Sept. 11	June 17	3,522
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators.	Aug. 17	July 19	1,452
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	†Mar. 10	Sept. 10	3,070
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Sept. 13	June 28	2,063
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†June 10	†Jan. 11	1,521
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	†Mar. 17	†Mar. 5	1,926
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	Sept. 27	June 20	2,818
40. DRUMMOND, E. J., Receptacles (part); Packages	†July 19	Sept. 20	3,155
41. HERTZ, M., Recorders; Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	June 12	June 26	2,800
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	†Sept. 26	†Aug. 1	1,205
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†Aug. 5	†July 9	1,436
44. HARVEY, L. P., Refrigeration; Preserving	June 17	July 12	1,205
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	Dec. 13	July 22	2,906
46. MUSHAKE, W. L., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	Dec. 14	July 17	2,022

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Appeals for the District of Columbia

SPEED PRODUCTS COMPANY, INC.
v.
TINNERMAN PRODUCTS, INC., AND LAWRENCE C. KINGSLAND, COMMISSIONER OF PATENTS

No. 9709. Decided May 18, 1948

[— F.2d —; 77 USPQ 447]

1. TRADE-MARKS—OPPOSITION—SUIT UNDER 4915 R. S. AGAINST COMMISSIONER.

Where opposition to the registration of a trade-mark is sustained by the Patent Office and applicant files an action under sec. 4915 R. S. in the District Court of the United States for the District of Columbia, *Held* that the Commissioner is a proper party.

2. SAME—SAME—SUITS UNDER 4915 R. S. IN DIFFERENT FEDERAL COURTS—PROPER PRACTICE.

Where two cases between the same parties on the same cause of action are commenced in two different Federal courts, the one which is commenced first is to be allowed to proceed to its conclusion first, and an injunction to accomplish this is proper.

3. SAME—SAME—SAME—EFFECT OF INTERVENTION BY OPPOSER IN D. C. SUIT.

Where opposition to the registration of a trade-mark is sustained by the Patent Office and applicant sues the Commissioner alone under sec. 4915 R. S. in the District of Columbia court, and where applicant at a later date files a 4915 R. S. suit against the opposer in a New York district court, and at still a later date the opposer intervenes in the District of Columbia suit and obtained from that court an order for the advancement of the District of Columbia suit and an injunction against applicant from proceeding with the New York suit, *Held* that, since opposer's intervention in the District of Columbia suit did not relate back to the date of commencement of that suit, the New York action against opposer was first in time and should be allowed to proceed, and *Held* that the order for advancement of the District of Columbia suit and the injunction must be set aside.

4. SAME—SAME—SUIT UNDER 4915 R. S. AGAINST OPPOSER—COMMISSIONER NOT A NECESSARY PARTY.

Where opposition to the registration of a trade-mark is sustained by the Patent Office and applicant sues the opposer in a 4915 R. S. suit, the Commissioner of Patents not being made a party to the suit, *Held* that, even though the relief prayed for was a decree that applicant is entitled to registration of the trade-mark applied for and directing the Commissioner to register it, the Commissioner's presence as a party was not necessary.

APPEAL from the District Court of the United States for the District of Columbia. Civil Action No. 87,630.

REVERSED AND REMANDED.

Charles M. Palmer (*Harry Price* of counsel) for Speed Products.

Albert R. Teare and *Herman G. Lombard* for Tinnerman.

W. W. Cochran, E. L. Reynolds and *J. Schimmel* for the Commissioner of Patents.

Before STEPHENS, CLARK and WILBUR K. MILLER, *Associate Justices*

STEPHENS, *A. J.*:

This is a special appeal from two orders of the District Court of the United States for the District of Columbia, one enjoining the appellant Speed Products Company, Inc., from proceeding in the United States District Court for the Southern District of New York with an action there pending between the appellant and the appellee Tinnerman Products, Inc., until after the jurisdiction of the District of Columbia court had been exhausted in the instant proceeding; the other advancing the instant proceeding for trial. The principal question on the appeal is whether or not the injunction was properly issued. The facts are as follows:

On May 22, 1943, Speed Products made application in the United States Patent Office for registration of a trade-mark comprising an ornamental design and the expression "Speed" applicable to office specialties such as perforating and fastening devices, stapling machines, and the like. The application was opposed by Tinnerman as the owner of several trade-marks containing the word "Speed" applicable to hardware products. The Patent Office sustained the opposition, and on July 1, 1946, denied Speed Products' application. On November 7, 1946, in the District of Columbia court Speed Products commenced an action, under Rev. Stat. § 4915 (1878), 35 U. S. C. § 63 (1940), against the Commissioner of Patents seeking a decree directing him to register the trade-mark applied for. On November 14, 1946, Speed Products commenced action in the New York court against Tinnerman. Its complaint in that suit in a first cause of action, again founded upon Rev. Stat. § 4915, also sought a decree directing the Commissioner of Patents to register the trade-mark applied for. A second cause of action sought a declaratory judgment that none of Tinnerman's trade-marks was infringed by Speed Products and an injunction restraining Tinnerman from threat-

Vol. 612 No. 1 Tuesday, July 6, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

ening Speed Products or its customers with infringement suits. On December 5, 1946, the Commissioner appeared in the District of Columbia court by answer. On the same date Tinnerman applied for (and on December 18 was granted) permission by the District of Columbia court to intervene, as an answering defendant and counterclaimant, in the Speed Products action against the Commissioner in that court. Tinnerman's answer resisted registration of the trade-mark applied for by Speed Products; and its counterclaim prayed for a declaratory judgment that its own trade-marks were valid, for an injunction against infringement thereof by Speed Products, and for damages for alleged infringement. On December 27, 1946, Tinnerman moved in the New York court for dismissal of the first cause of action therein upon the ground that that court lacked jurisdiction to proceed under Rev. Stat. § 4915 in the absence of the Commissioner as a party. Tinnerman moved also that the second cause of action be stayed upon the ground that the issues therein had been raised by his counter-claim in the proceeding in the District of Columbia court. On March 27, 1947, the New York court denied both motions. It held that it could properly proceed with the first cause of action under Rev. Stat. § 4915 despite the absence of the Commissioner as a party; and it ruled that the second cause of action ought not be stayed since the jurisdiction of the New York court had attached first as to that cause. *Speed Products Co., Inc.*, v. *Tinnerman Products, Inc.*, 73 USPQ 181.

In the fall of 1947 it became apparent to Speed Products and Tinnerman that the two suits, the one in the District of Columbia court and the other in the New York court, would be reached for trial at about the same time. Both parties moved in the District of Columbia court to have the time of trial in that court changed. Specifically, Tinnerman on September 25, 1947, moved for an order advancing the date of trial; Speed Products on October 13, 1947, moved for an order suspending proceedings until the action in the New York court had been tried—this upon the ground that the New York action was prior as between Speed Products and Tinnerman and that the New York forum was the more convenient for the parties. Then Tinnerman on October 15, 1947, again in the District of Columbia court, moved for an order enjoining Speed Products from proceeding in the New York court until the action in the District of Columbia court had been tried. The District of Columbia court heard all of these motions at the same time and on November 3, 1947, entered two orders. In one, responsive in part to the Tinnerman motion of October 15 just described, it enjoined Speed Products from proceeding in the New York court with the first cause of action therein, i. e., the action under Rev. Stat. § 4915. In a second order it directed that trial of the issue arising under the Speed Products complaint and the Tinnerman answer in the District of Columbia court, i. e., the Rev. Stat. § 4915 action therein, should be advanced; it ordered also that the trial of the issues arising under the Speed Products complaint and the Tinnerman counterclaim should be stayed until trial of the same issues had been had in the New York court. Speed Products then filed (under D. C. Code (1940) § 17–101) a petition for allowance of a special appeal from the first order enjoining it from proceeding with the Rev. Stat. § 4915 action in the New York court, and from that portion of the second order advancing for trial in the District of Columbia court the Rev. Stat. § 4915 action therein. We allowed the appeal.

[1] Three principal questions are raised by the appellant Speed Products with respect to the granting of the injunction. First, did the District of Columbia court have jurisdiction to proceed against the Commissioner of Patents alone. It is contended that the Commissioner was not a proper party and that the court therefore did not have jurisdiction. This question is answered by *Tomlinson of High Point* v. *Coe*, 74 App. D. C. 364, 123 F.2d 65 (1941). There Tomlinson, a manufacturer of furniture, sought in the Patent Office to register as a trade-mark the term "The Williamsburg Galleries." This was first held by the Commissioner to be registrable and was published in the OFFICIAL GAZETTE. Thereafter an opposition to the registration, based upon the use of a similar trade-name, was filed by Colonial Williamsburg, Inc. The Examiner of Interferences sustained this opposition and the Commissioner of Patents affirmed. Tomlinson then brought suit against the Commissioner in the District Court of the United States for the District of Columbia under Rev. Stat. § 4915, not joining Colonial Williamsburg, Inc., as a defendant. The Commissioner moved to dismiss upon the ground that he was not a proper party, and the district court granted the motion. On appeal we reversed, holding that the Commissioner was a proper party. We distinguished *Coe* v. *Hobart Mfg. Co.*, 70 App. D. C. 102 F.2d 270 (1939), and *J. C. Eno (U. S.) Limited* v. *Coe*, 70 App. D. C. 337, 106 F.2d 858 (1939). Speed Products attempts to distinguish the Tomlinson case from the instant case upon the ground that in the former the opposing party in the Patent Office had not a registered trade-mark but only a trade-name. But this distinction is relevant only to the question of the correctness of the decision of the Commissioner, not to the question whether under Rev. Stat. § 4915 the district court had jurisdiction to entertain the action against the Commissioner alone to compel the registration of the trade-mark.

[2] The second question is whether or not the District of Columbia court had power to enjoin Speed Products from proceeding with the New York action. The law on this question is well settled. Where two cases between the same parties on the same cause of action are commenced in two different Federal courts, the one which is commenced first is to be allowed to proceed to its conclusion first, and an injunction to accomplish this is proper. This is recognized by three cases: *Triangle Conduit & Cable Co.* v. *National Elec. P. Corp.*, 125 F.2d 1008 (C. C. A. 3d 1942), cert. denied, 316 U. S. 676 (1942); *Crosley Corporation* v. *Hazeltine Corporation*, 122 F.2d 925 (C. C. A. 3d 1941); *Cresta Blanca Wine Co.* v. *Eastern Wine Corporation*, 143 F.2d 1012 (C. C. A. 2d 1944). For example, in the second of the three cases cited the Hazeltine Corporation, after first giving formal notice to the Crosley Corporation that it was infringing twenty-two of Hazeltine's patents, sued Crosley in a United States district court in Ohio alleging infringement of two of the twenty-two patents referred to. Thereafter Crosley brought suit against Hazeltine in the United States district court in Delaware seeking a declaratory judgment as to the validity and infringement of the remaining twenty patents specified in the Hazeltine notice. Still later Hazeltine filed several suits in the district court in Ohio seeking decrees that Crosley had infringed fifteen of the patents specified in the notice, all of these being involved in the declaratory judgment action commenced by Crosley. Crosley then moved the district court in Delaware to enjoin Hazeltine from proceeding with the suits in Ohio involving the fifteen patents until the Delaware court had decided the declaratory judgment suit. The district court in Delaware denied the Crosley motion. The circuit court of appeals reversed. It put the problem as follows:

> We are thus called upon to determine whether a United States district court which first obtains jurisdiction of the parties and issues may, and under the circumstances of this case should, enjoin proceedings involving the same issues and parties begun thereafter in another United States district court. To put it in other words, does a district court have the power to issue such an injunction and if it does, was it an abuse of discretion to deny such an injunction under the circumstances of this case? [122 F.2d at 927.]

It concluded that the district court had the power to issue the injunction and that it had abused its discretion in declining to do so.

[3] The third question is whether or not the District of Columbia court should, in the circumstances of the instant case, have exercised its power and enjoined—as it did—Speed Products from proceeding in the New York court. The answer to this question is in the negative for the reason that the action in the New York court was the first of the two actions between Speed Products and Tinnerman. We rest our decision on this point on the Cresta Blanca Wine case above cited. In that case Cresta Blanca Wine Company, a wholly owned subsidiary of Schenley Distillers Corporation, sued Eastern Wine Corporation in a United States district court in New York praying for a declaratory judgment that Cresta Blanca had a right to the use of "Cresta Blanca" as a trade-mark for certain of its wines, and charging that this trade-mark was infringed by Eastern's use of the trade-mark "Casa Blanca" for its wines. Eastern, defendant in the New York suit, then brought an action as plaintiff against Cresta Blanca and Schenley as defendants in the United States district court in Delaware charging trade-mark infringement by Cresta Blanca's use of its trade-mark "Cresta Blanca." Schenley, the parent corporation of Cresta Blanca, then applied for leave to intervene in the New York action, and both Cresta Blanca and Schenley prayed the New York court to stay further proceedings in the Delaware suit until final determination of the New York case. The New York court denied both Schenley's application for intervention and the prayer of Cresta Blanca and Schenley for a stay of the Delaware proceeding. On appeal the circuit court of appeals ruled that Cresta Blanca was entitled to have the Delaware action stayed as against it but not as against Schenley (this apparently upon the theory that Cresta Blanca could obtain a stay only in its own interest and not in the interest of another party to the Delaware suit, to wit, Schenley). The theory of Schenley's attempted intervention in the New York suit was that intervention, if allowed, would relate back to the time of the institution of that suit by Cresta Blanca and that therefore Schenley, as well as Cresta Blanca, would be entitled to enjoin Eastern from proceeding in the Delaware court upon the theory that the New York action as to both Schenley and Cresta Blanca was first. But the Circuit court of appeals held that the Schenley intervention if allowed would not relate back to the date of the commencement of the New York suit by Cresta Blanca, and that that being true and the Schenley application to intervene being subsequent to the commencement of the Delaware suit, Eastern in the latter could, if intervention were allowed to Schenley in New York, secure restraint of Schenley's New York proceeding as second in time. Hence, ruled the circuit court of appeals, there was no reason for allowing intervention by Schenley in the New York action. Specifically the court said:

> There remains for consideration Schenley's appeal. Schenley was not entitled to intervene as of right under Rule 24(a) of the Federal Rules of Civil Procedure, 28 U. S. C. A. following section 723c. The application was for permissive intervention under Rule 24(b). We see no abuse of discretion in denying it. Eastern sued Schenley in Delaware before Schenley applied for intervention in the New York suit. It can hardly be said that intervention, had it been granted, would have related back to the filing of Cresta's complaint. Therefore Schenley's proposed intervention against Eastern would have been the later action between them and the very principle Schenley invokes would require staying the New York action rather than the Delaware suit. . . . . [143 F.2d at 1014.]

It follows that the injunction in the instant case should not have been granted. The Tinnerman application for intervention in the Speed Products suit in the District of Columbia court did not relate back to the date of the commencement of that suit. Accordingly the New York action of Speed Products against Tinnerman was first in time and should be allowed to proceed. It follows also from the foregoing that the order of the District of Columbia court to advance for trial the suit therein must be set aside.

[4] It may be urged that to set aside the injunction and thus permit the action in the New York court to proceed first is to legitimatize the bringing of two suits by a plaintiff against the same defendant on the same cause of action in two different jurisdictions at substantially the same time and that such duplication with consequent burden to the courts should not be permitted. The answer to this is that Speed Products brought no action against Tinnerman in the District of Columbia

court, but only in the New York court. It had a right to sue Tinnerman in New York if it saw fit to do so. It is true that the relief prayed for in the first cause of action in the New York suit was a decree that Speed Products is entitled to registration in the Patent Office of the trade-mark applied for, and directing the Commissioner to register it. But the Commissioner was not made a party to the New York suit and as the New York court ruled, *Speed Products Co., Inc.*, v. *Tinnerman Products, Inc.*, cited above, his presence as a party was not necessary. To this effect see also *Century Distilling Co.* v. *Continental Distilling Co.*, 106 F.2d 486 (C. C. A. 3d 1939). The decree sought was therefore, in effect, one for a declaration of rights as against Tinnerman.

We, therefore, reverse the order of November 3, 1947, enjoining Speed Products from proceeding in the New York court with the first cause of action therein, and we reverse also that part of the second order of November 3, 1947, which directed the trial of the issue arising under the Speed Products complaint and the Tinnerman answer in the District of Columbia court to be advanced.

REVERSED AND REMANDED.

U. S. Court of Appeals for the District of Columbia

LAWRENCE C. KINGSLAND, COMMISSIONER OF PATENTS
v.
CARTER CARBURETOR CORPORATION

No. 9574. Decided May 25, 1948

[— F.2d —; 77 USPQ 499]

1. INTERFERENCE—RULES 122 AND 124—PETITION TO COMMISSIONER—MANDAMUS.

Where the Primary Examiner in setting up an interference between a patent and an application ignored a prior decision of the district court regarding applicant's filing date and made applicant the junior party, and where applicant moved to shift the burden of proof, but the Examiner of Interferences dismissed the motion, and applicant filed a petition to the Commissioner asking for review and reversal of the action of the Examiner of Interferences, and where the Assistant Commissioner ruled that applicant should be made the senior party, without consideration of his motion to shift the burden of proof, *Held* that the district court erred in directing the Commissioner to vacate the Assistant Commissioner's action as ultra vires, since rule 124 does not apply, for neither the Primary Examiner nor the Assistant Commissioner rendered a decision on applicant's motion to shift the burden of proof.

2. SAME — SAME — COMMISSIONER'S SUPERVISORY AUTHORITY.

Held that the absence of a right of appeal where rule 124 applies does not mean that the Commissioner cannot exercise his supervisory authority on request; the Patent Office rules not only do not but could not limit the Commissioner's supervisory authority.

3. SAME—SAME—SAME.

Where R. S. 481 as amended, 35 U. S. C., sec. 6, provides that the Commissioner of Patents shall superintend or perform all duties respecting the granting and issuing of patents, *Held* that the Commissioner cannot abdicate this statutory duty of superintendence, it being immaterial that he may establish regulations "not inconsistent with law" for the conduct of proceedings in the Patent Office.

APPEAL from the District Court of the United States for the District of Columbia. Civil Action No. 87,782.

REVERSED.

W. W. Cochran (*H. L. Reynolds* of counsel) for the Commissioner of Patents.

Hugh M. Morris and *Winston Ellis Hobbs* (*Gilbert P. Ritter* and *George R. Bricson* of counsel) for Carter.

Before EDGERTON, CLARK, and PRETTYMAN, Associate Justices

EDGERTON, *J.*:

[1] In a Patent Office interference proceeding between appellee's Coffey Patent No. 2,035,351 and Hunt application No. 727,648, the Primary Examiner overlooked or ignored a prior decision of the district court regarding Hunt's filing date and made Hunt the junior party. This subjected Hunt to the burden of proof. He moved to shift the burden of proof. The Examiner of Interferences did not set this motion for hearing before the Primary Examiner but dismissed it, without prejudice to Hunt's right to assert a filing date earlier than the one the Primary Examiner had fixed. Hunt filed a "Petition to the Commissioner" asking him to review and reverse the action of the Examiner of Interferences. An Assistant Commissioner thereupon ruled that Hunt "should be made the senior party, without consideration of his motion to shift the burden of proof." The Assistant Commissioner said: "Coffey was not a party to the proceeding in the district court, and its decision is not res judicata as to him but, in accordance with the settled practice, the Patent Office will accept the court's decision as correct, unless it is shown not to be so."

The question before us is not whether the action of the Assistant Commissioner was right but whether the Commissioner, and so the Assistant Commissioner, had authority to act at all. Patent Office Rule 122 provides that "motions to shift the burden of proof * * * will be heard and determined by the Primary Examiner." Patent Office Rule 124 provides that "No appeal will be permitted from a decision rendered on a motion brought under the provisions of" rule 122. The district court, in a suit brought by appellee, has directed the Commissioner to vacate the Assistant Commissioner's action as ultra vires, and the Commissioner appeals.

We think the court erred. Rule 124 does not apply, for neither the Primary Examiner nor the Assistant Commissioner rendered a decision on Hunt's motion to shift the burden of proof. Moreover, even if both had rendered decisions on that motion each would have been acting within his authority. [2] The absence of a right of appeal to the Commissioner where rule 124 applies does not mean that he cannot exercise his supervisory authority on request. *Wigton* v. *Coe*, 62 App. D. C. 367, 68 F.2d 414, cert. denied, 291 U. S. 677. The difference between the two processes is much like that between appeal and certiorari. The Patent Office rules not only do not but could not limit the Commissioner's supervisory authority. [3] For U. S. § 481 as amended, 35 U. S. C. § 6, provides that "The Commissioner of Patents, under the direction of the Secretary of Commerce, shall superintend or perform all duties respecting the granting and issuing of patents * * *." The Commissioner cannot abdicate this statutory duty of superintendence. It is therefore immaterial that he may establish regulations "not inconsistent with law" for the conduct of proceedings in the Patent Office R. S. § 483 as amended, 35 U. S. C. § 6.

PRETTYMAN, *J.*, concurs in the result.

REVERSED.

U. S. Court of Customs and Patent Appeals

IN RE DODDS.

No. 5116. Decided March 2, 1948

[166 F.2d 569; 77 USPQ 110]

1. PATENTABILITY—COMBINING REFERENCES—ANALOGOUS ARTS.

Where appellant claims a fractionating apparatus, and the rejection is upon a reference showing a fractionator in view of other references which are not fractionating structures, *Held* that this is of no importance, since all the references disclose structures that are designed to bring a gas and a liquid into intimate contact, and, therefore, they are each in the same art or at least in analogous arts.

2. SAME—SAME—ALLEGED INOPERABILITY.

Where appellant contends that the primary reference from a practical standpoint cannot operate successfully, and further contends that from a practical standpoint the structure of the auxiliary reference is inoperative, *Held* that since there is nothing in the record upon which appellant can successfully base such contentions, they are merely expressions of opinion and should not be considered as possessing any probative force.

3. SAME—FRACTIONATING APPARATUS.

Certain claims to a fractionating apparatus involving counter flow of liquid and vapor in repeated contact *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 431,129.

AFFIRMED.

E. V. Hardway (*Percy H. Moore* of counsel) for Dodds.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This appeal is from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner finally rejecting all of the claims, 10 and 11, of an application, Serial No. 431,129, filed February 16, 1942, for a patent alleging new and useful improvements in "Fractionating Apparatus."

The claims were rejected as unpatentable over the following cited prior art: Solvay, 177,580, May 16, 1876; Evans et al. (British), 3,445, March 12, 1878; Wait, 1,963,058, December 4, 1934.

The claims read as follows:

10. Fractionating apparatus comprising an inclined drum, approximately vertical partitions in the drum spaced apart and spaced from the ends of the drum to provide an inlet chamber, a discharge chamber and intermediate chambers, an inlet pipe entering the inlet chamber, a vapor outlet nozzle leading from the discharge chamber said drum being inclined upwardly from the inlet chamber and there being openings connecting the bottoms of the chambers to allow the unobstructed gravity return flow of liquid continuously from the discharge chamber through the intermediate chambers to the inlet chamber and thus providing for a common body of liquid at the bottom of and extending from end to end of, the drum, whose surface is above said openings and which forms seals with said partition to separate said chambers, a hoodlike vapor conduit, in each intermediate chamber anchored to the partition in the rear and terminating in a restricted, downwardly directed discharge end submerged in the liquid and through which vapor may pass from a rear chamber and be discharged into the liquid in a forward chamber and means for admitting vapor into and withdrawing liquid from the inlet chamber.

11. Fractionating apparatus comprising an inclined drum, approximately vertical partitions in the drum spaced apart and spaced from the ends of the drum to provide an inlet chamber, a discharge chamber and intermediate chambers, an inlet pipe entering the inlet chamber, a vapor outlet nozzle leading from the discharge chamber, said drum being inclined upwardly from the inlet chamber and there being openings connecting the bottoms of the chambers to allow the unobstructed gravity return flow of liquid continuously from the discharge chamber through the intermediate chambers to the inlet chamber and thus providing for a common body of liquid at the bottom of and extending from end to end of, the drum, whose surface is above said openings and which forms seals with said partitions to separate said chambers, a hoodlike vapor conduit, in each intermediate chamber anchored to the partition in the rear and terminating in a downwardly directed discharge end submerged in the liquid and through which vapor may pass from a rear chamber and be discharged into the liquid in a forward chamber and means for admitting vapor into and withdrawing liquid from the inlet chambers, and an inlet, for a reflux, entering the discharge chamber.

The application relates to a device designed for fractionating, absorbing, and kindred processes wherein there is a counter flow of liquid and vapor in repeated contact. The structure comprises an inclined elongated cylindrical chamber, between the ends of which are partitions secured at the top of the drum and dropping below the liquid level. The partitions divide the drum into end chambers and a number of intermediate chambers. The liquid is introduced into the drum at a point near the bottom of the upper end and flows through the chambers of the drum to an opening on the lower side thereof near its end. The gas is introduced into the lower end chamber through an aperture on the top of the drum and leaves at an opening on the upper side near its upper end after it has passed through hoodlike vapor conduits, which are fastened to the partitions, and rapidly bubbled through the body of the liquid flowing in opposite direction from the movement of the gas.

The Wait patent discloses a fractionating apparatus comprising an inclined drum or chamber in which there are vertical partitions forming a plurality of chambers within the drum. The liquid inlet is positioned at the elevated end of the drum and its outlet at the lower elevation. The vapor inlet is at the lower elevation and its exit at the upper elevation of the drum. The partitions are open at the bottom so as to permit the liquid to flow by gravity from one chamber to another.

The Solvay patent relates to an apparatus for washing and absorbing gases. It discloses a device comprising a series of compartments within an elongated body. The compartments are horizontally situated and in communication with each other by means of an upper and lower series of elbow bent pipes. These pipes project from opposite sides of the compartments. The diameter of the upper pipe

is smaller than that of the lower pipe and the upper pipe projects into the lower pipe so that when liquid flows into one end compartment and gas is introduced into the other end compartment, the gas circulates through the upper series of pipes and the liquid circulates from compartment to compartment through the lower series of pipes counter-current to the path of the gas. The projecting ends of the upper series of pipes are serrated.

The British patent relates to "Improvements in the Manufacture of Coal Gas and in the Treatment of Ammoniacal Liquor Obtained in such Manufacture." There is described in the patent an apparatus designed for the removal of sulphur compounds contained in coal gas by a process in which the coal gas is washed with a counter-current flow of liquid. The apparatus comprises an inclined chamber which is divided into compartments by partitions. The partitions are in communication with each other by means of pipes which dip into the liquid flowing through the compartments. In the partitions there are openings above the liquid level communicating with those pipes and with the gas supply. The compartments further communicate with each other by means of openings in the partitions near the bottom of the chamber. The gas enters at the left hand end of the chamber and passes through the compartments serially, bubbling through the liquid in one compartment before passing to the next. The liquid enters the chamber at the right hand end and flows continuously through the compartments counter-currently to the flow of the gas.

The Primary Examiner relied principally on the patent to Wait and rejected the claims as being unpatentable over that patent in view of either of the other two references. He held that the structure defined by the rejected claims differs from the structure of the Wait patent only by the recitation of the limitation "a hood-like vapor conduit in each intermediate chamber * * * terminating in a downwardly directed discharge end submerged in the liquid * * *." He pointed out that in the Wait structure the gas merely bubbles past the lower end of the partition, but held that that lack of structure in the Wait patent is shown in the British reference. In the Examiner's opinion the British patent appeared to be a substantial anticipation of the claims, but he expressed the thought that since the patent to Wait is domestic and has a more complete disclosure, that it offered a better basis for rejecting the claims.

The Board of Appeals concluded that the position taken by the Examiner was fully justified. Apparently the question of operativeness of the device of the Solvay patent was raised by appellant before the Board. In what respect operativeness was questioned we do not know, except that the Board, in holding that such question was not justified, stated that the disclosure of the patent clearly indicated a continuous flow of fluid from its source to where it leaves the tank and a flow of gas from its entrance to its exit in an opposite direction.

Appellant in his brief contends that the apparatus of the Wait patent does not show the hood-like vapor conduits as defined by the claims. It is admitted that there is nothing in the Wait structure disclosing a "hood-like vapor conduit in each intermediate chamber anchored to the partition in the rear and terminating in a restricted, downwardly directed discharge end submerged in the liquid; * * *."

The hood-like conduit set out in the claims has for its sole purpose the conveying of gas from the inlet through the liquid successively in each individual chamber and the gas bubbles through the liquid in each chamber on its way to the exit. The counter flow of gas and liquid used in the Wait structure traps the gas in the individual compartments from which the gas escapes over the end of the partition to the next succeeding compartment in the form of bubbles. The patent discloses a continuous flow of liquid and a continuous supply of the liquid to be scrubbed. It seems to us that the apparatus of the Wait patent should produce the same results as appellant's in essentially the same fashion.

[1] The manner in which appellant places his conduits, we think, is old as shown in the patent to Solvay and in the British patent. The devices of those references are not fractionating structures, but this is of no importance for the reason that the structure of the Wait patent is a fractionator. All of the references disclose structures that are designed to bring a gas and a liquid into intimate contact, and, therefore, as far as the facts here are concerned, they are each in the same art or at least in analogous art.

We do not think that it would involve invention to place the gas conduits of the Solvay patent or those of the British patent in the partitions of the Wait structure. Clearly they are equivalents of the edge structure of the Wait device, and, in our opinion, it would be obvious to make such placement if so desired.

[2] Appellant in his brief argues that the Wait structure, from a practical standpoint, can not operate successfully as a fractionating tower, and he further contends that from a practical standpoint the structure of the Solvay patent is likewise inoperative. There is nothing in the record upon which appellant can successfully base such contention. Therefore, they are merely expressions of opinion and should not be considered as possessing any probative force. *In re Pierce*, 17 CCPA (Patents) 625, 35 F.2d 781, 3 USPQ 253, 390 O. G. 265; *In re Volt et al.*, 33 CCPA (Patents) 737, 152 F.2d 987, 68 USPQ 206, 585 O. G. 3; *Metropolitan Engineering Co. v. Coe*, 64 App. D. C. 315, 78 F.2d 199, 25 USPQ 216, 455 O. G. 3.

We are of opinion that the solicitor in his brief properly stated that a completely operative and anticipatory structure would result if the conduits of the Solvay device for bubbling the gas successively through the liquid in the different compartments were used in the Wait structure.

Since it appears to us that the claims are clearly unpatentable over the Wait patent in view of that to Solvay, it is unnecessary to further discuss the British patent.

For the reasons hereinabove set out, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE SWITZER ET AL.

No. 5143. Decided January 27, 1948

[— F.2d —; 77 USPQ 156]

1. PATENTABILITY — COMPOSITION — EQUIVALENCY DISCLOSED IN APPELLANT'S APPLICATION.

Where the prior art patent clearly discloses a resinous composition containing titanium dioxide as an inert filler or pigment and that material by the terms of appellant's own specification, is equivalent to the carbon black of the appealed claims, *Held* that the claims limited to carbon black do not define patentable subject matter.

2. PATENTABILITY—COATING COMPOSITION.

Certain claims for a coating composition to be applied to metal surfaces for service in the presence of caustic soda comprising polystyrene and carbon black *Held* to define no subject matter inventive or patentable over the prior art.

3. PRACTICE—RULE 75—REFERENCE PATENT A CONTINUATION-IN-PART APPLICATION — EFFECTIVE DATE THEREOF.

Where appellant filed an affidavit under rule 75 to remove a certain patent as a reference, but the affidavit did not antedate the bandoned applications referred to in the patent as copending applications of which the patent application was a continuation-in-part, and where the abandoned applications contain a disclosure of the matter relied upon in the patent, *Held* that the Examiner correctly held that the affidavit did not antedate the reference.

APPEAL from the Patent Office. Serial No. 332,966.

AFFIRMED.

Pennie, Edmonds, Morton and *Barrows* (*Louis D. Forward* and *Clarence M. Fisher* of counsel) for Switzer.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting claims 24 and 25 in appellants' application for a patent for "certain new and useful improvements in Preserving Caustic Soda from Contamination."

The claims in issue read as follows:

24. A coating composition adapted to be applied to metal surfaces for service in the presence of caustic soda which comprises a relatively small proportion of carbon black, a relatively large proportion of polystyrene having a molecular weight ranging from about 50,000 to about 100,000, and a solvent for the polystyrene, the proportion of polystyrene present being several times the proportion of carbon black present, said composition being free from saponifiable material.

25. A coating composition adapted to be applied to metal surfaces for service in the presence of caustic soda which consists of several parts of polystyrene having a molecular weight ranging from about 50,000 to about 200,000, about one part of carbon black a relatively small proportion of a plasticiser selected from the group consisting of diamyl naphthalene and chlorinated diphenyls, and a solvent for the polystyrene and the plasticiser.

The references are: British patent, 402,877, Dec. 14, 1933; Waldeck, 2,111,242, Mar. 15, 1938; Stoesser et al., 2,166,557, July 18, 1939; Hempel, 2,196,939, Apr. 30, 1940; Dittmar, 2,211,689, Aug. 13, 1940; Allen, 2,273,822, Feb. 24, 1942.

The claims hereinbefore recited are directed to a coating composition adapted to be applied to metal surfaces for service in the presence of caustic soda. Claims 9, 17, 18, and 19, directed to a method of preserving caustic soda in metallic containers from contamination with the metals of the containers, have been allowed.

Appellants concede that the limitations as to the molecular weight of the polystyrene that are specified in claims 24 and 25, ranging respectively from about 50,000 to about 100,000, and from about 50,000 to 200,000, are not such as to define a polystyrene that is in any sense a novel product per se.

Appellants further concede that various plastic materials including finely-divided solids have been known and used in the art as the essential film-forming ingredient in coating compositions of the general class here involved, and that such coating compositions when applied to metal containers have protected the metal against chemical attack "to a considerable extent."

Furthermore, the point, that the use of a chlorinated diphenyl as a plasticizer for the polystyrene is old in the art, is a point which "appellants herein always have freely conceded."

Appellants contend, however, that prior to the development of the respective coating compositions defined by the claims on appeal, no composition was known which when applied to metal containers would afford protection to the metal against hot concentrated caustic soda for a prolonged period of time.

Appellants allege that the ability of a coating composition to afford prolonged protection to the metal against chemical attack by hot highly concentrated caustic soda was obtained by them as the result of the incorporation of certain finely-divided solid materials in the polystyrene of the coating composition.

Appellants further allege that many of the finely-divided solid materials commonly used as fillers or pigments in the production of coating compositions cannot be used in their compositions, because such fillers or pigments react with caustic soda; and they discovered that for some reason which they are still unable to explain, carbon black was substantially inert to caustic soda and was greatly superior to any other finely-divided solid material in a coating composition for the purpose of providing prolonged protection to metal containers.

* This cause was originally decided by this court on January 27, 1948. Thereafter, counsel for appellant filed a petition for rehearing. The rehearing was granted April 2, 1948, solely for the purpose of permitting the court to revise certain language in its original decision to which counsel for appellant had directed the court's attention.

Appellants contend that the incorporation of carbon black in the essential film-forming ingredients of their coating composition has resulted in the patentable subject matter defined by the appealed claims.

Claim 24 defines a composition which comprises (1) a relatively small proportion of carbon black, (2) a relatively large proportion of polystyrene, and (3) a solvent for the polystyrene. The claim includes the additional limitation that the composition be free from saponifiable material.

Claim 25 defines a composition which consists of (1) several parts of polystyrene, (2) one part of carbon black, (3) a plasticizer selected from the group consisting of diamyl naphthalene and chlorinated diphenyls, and (4) a solvent for the polystyrene and the plasticizers

Appellants have confined their appeal herein to a review of the ground upon which product claims 24 and 25 were rejected, but it is necessary to consider also the ground upon which the Board rejected certain closely related claims that were not appealed to this court.

In fact, the subject matter of the claims for the composition is so closely related to the subject matter of the claims for the method that the tribunals of the Patent Office in rejecting certain of appellants' claims for method did not wholly differentiate between the ground upon which those claims were rejected and the ground upon which they rejected appellants' claims 24 and 25 for the composition.

The subject matter was described generally by the Examiner as follows:

> The invention relates to a process of coating metallic containers with resinous compositions which are resistant to caustic alkali. The composition comprises a relative large proportion of polystyrene having a molecular weight of at least 50,000 and a relative small proportion of finely divided solid which is normally a pigment. The solid is preferably carbon black or titanium dioxide. Also incorporated in the resinous composition may be a plasticiser such as chlorinated diphenyl.

In the appeal from the action of the Examiner in finally rejecting appellants' claims 20 to 25, inclusive, the Board of Appeals recited method claim 20, which was not appealed to this court, as illustrative of the subject matter of all such claims, and stated:

> Appellants found that prior art metal coatings would not be effective against hot caustic soda at 210° F. or in excess of 140° F. and their invention is said to remove this defect due to the use in their composition of a small amount of pigment or finely divided solid (titanium dioxide or carbon). Reference is made to the molecular weight of the polymer but in view of the broad terminology employed in the claims in referring to the molecular weight, it seems that they are intended to cover the usual prior art polymers providing that they contain sufficient pigment.

Certain of the comments quoted from the decisions of the Examiner and the Board seemingly were occasioned by the following from the specification:

> • • • A number of such coatings have been proposed, but so far as we are aware none of these coatings is durable under severe conditions of use such as encountered in storage or shipment of very strong caustic soda solutions at high temperatures, say in excess of 140° F. Thus, in so far as we are aware none of the coating materials proposed heretofore will withstand the action of 70–75% NaOH solutions at temperatures of the order of 210° F. • • •
>
> As a result of our investigations, we have discovered a method • • • which involves coating the metal surfaces of the containers with a mixture containing a relatively high proportion of polystyrene and a relatively small proportion of a finely-divided solid that is substantially inert to caustic soda. Preferably, the finely-divided solid is a pigment, and several pigments that are substantially inert with respect to caustic soda may be employed, among them, titanium dioxide and carbon black.

The British patent, issued to the Celluloid Corporation of New Jersey, so far as pertinent, relates to articles made of cellulose and more particularly to articles of this character having a high resistance to chemical reagents. The patent discloses that polystyrene is of especial value when used in a coating composition for improving chemical resistance to acid or alkali.

The Board held that while the British patent does not disclose that the pigments should be finely divided, it is a matter of common knowledge that they are finely divided, and that such knowledge applied to the carbon black of claim 24.

The patent to Waldeck relates to a coating composition which readily adheres to the surfaces of metals used in the manufacture of apparatus for storing or shipping concentrated caustic solutions to form films "which are highly resistant to the caustic even for relatively long periods of time." Ethyl cellulose may be employed, and the composition may be modified by the incorporation of suitable plasticizers and pigments.

The patent to Stoesser et al. discloses a coating composition, comprising a solvent and polystyrene plasticized with an ester, useful for the protection of metallic surfaces. The polystyrene lacquers may be modified by incorporating therein pigments, fillers, and other plasticizers. The plasticized polystyrene provides a strongly adherent protective finish for the metal. The finish is resistant to corrosion and substantially impervious to aqueous solutions of electrolytes. It exhibits little or no tendency to check or crack. In their composition the patentees prefer to utilize a polystyrene made in a particular way, but other forms of polymerized styrene may also be utilized. They do not mention that the composition contains carbon black.

The patent to Hempel relates to a synthetic resinous coating which may be utilized for the protection at the corner or edges or a surface of metal surfaces against severe corrosion, provided an inert filler is included within the resin in sufficient proportions. The resin is dissolved in an appropriate solvent and from 10% to 45% by volume of the resin; and preferably from 25% to 35% of an inert, very finely-divided pigment or filler is incorporated therewith. Titanium dioxide is specified as one of such suitable inert fillers. The ratio of pigments by weight to the resin will vary considerably, depending upon the specific gravity of the various pigments employed. Titanium dioxide is employed in a ratio of approximately 42 parts by weight of the pigment to 48 parts of the resin solution.

Hempel states that when the pigment is employed in sufficient proportions, the composition will thoroughly protect the corners of the metallic surface;

and says, "Just why the pigments provide extra protection, is not thoroughly understood."

The patent to Hempel contains claims both for the process and for the composition. One of the latter claims reads:

> 5. A metal object having at least one surface and an adjacent edge coated with a smooth, adherent, impermeable, highly corrosion resistant coating produced by the process of claim 1.

Of the secondary references, the only one that need be considered, in view of the state of the record, is the patent to Dittmar, which, so far as pertinent, discloses that it is old in the art to employ a plasticisers such as chlorinated diphenyl in a styrene resin coating composition.

The Examiner rejected claim 24 on the ground that the subject matter thereof involved no invention over the disclosure of the patent to Stoesser et al. in view of the disclosure of the patent to Hempel. The Examiner rejected the claim on the further grounds that the claim contained a negative limitation, and that "Since carbon black is a well known filler, its incorporation in any resin coating composition is believed to involve nothing more than choice and experimentation and not invention."

In the rejection of claim 25 it was indicated that the claim merely adds the plasticiser to claim 24. In rejecting claim 25 the Examiner held the patent to Dittmar disclosed that appellants' plasticizers for styrene were old in the art, "and it is, therefore, apparent that the incorporation of such plasticiser in any polystyrene resin would involve no invention."

The decision of the Examiner was affirmed by the Board of Appeals.

It is true, as appellants contend, that no single reference discloses the composition defined by the claims on appeal and that there is no disclosure in any cited patent of a composition containing carbon black.

[1] However, the patent to Hempel clearly discloses that it is old in the art to employ titanium dioxide as an inert filler or pigment in the composition. That material, by the terms of appellants' own specification, is equivalent to the carbon black of the appealed claims. Accordingly, the claims limited to carbon black do not thereby define patentable subject matter. *In re Stover*, 32 CCPA (Patents) 823, 146 F.2d 186, 64 USPQ 186, 573 O. G. 367.

[2] In view of the pertinent and obvious disclosures of the prior art of record, together with the admissions made by appellants, as hereinbefore set forth, and also in view of appellants' failure to controvert the statement made by the tribunals of the Patent Office that carbon black is a well-known filler or pigment, we conclude that the appealed claims define no subject matter inventive or patentable over such art. See *In re Williford*, 34 CCPA (Patents) 812, 158 F.2d 997, 72 USPQ 321, 568 O. G. 327; *In re Stover*, supra.

In view of our conclusion it would serve no useful purpose in this opinion to discuss all the points advanced by appellants, to each of which we have given extensive and considerate attention.

[3] Appellants filed an affidavit under rule 75 of the Rules of Practice in the United States Patent Office to remove the patent to Hempel from consideration as a valid reference.

The Examiner correctly held that the affidavit did not antedate or avoid the three abandoned applications which were referred to in the Hempel patent as co-pending applications of which the patent application was a continuation-in-part. Those earlier applications are part of the record herein and two of them disclose the use of the titanium dioxide just as the patent does.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

BLAND, J., sat during the argument of this case, but resigned before the opinion was prepared.

NOTICES

Interference Notices

Kaw Products Co. Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of John Bird Company, Bird Block, Sea St., Rockland, Maine, for registration of a trade-mark and registration No. 257,605, issued June 11, 1929, to Kaw Products Co. Inc., 19 North 4th St., Philadelphia, Pa., and the notice of such declaration sent by registered mail to the said Kaw Products Co. Inc. at the said address having been returned by the post office undeliverable, notice is hereby given that unless Kaw Products Co. Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

June 15, 1948.

Du Barry Sportwear Manufacturing Corp., its assigns or legal representatives, takes notice:

An interference having been declared by this Office between the application of Desmond's (Desmond's, Inc., assignee, substituted), 616 Broadway, Los Angeles, Calif., for registration of a trade-mark and registration No. 279,059 issued January 5, 1931, to Du Barry Sportwear Manufacturing Corp., 40 West 22nd St., New York, N. Y., and the notice of such declaration sent by registered mail to the said Du Barry Sportwear Manufacturing Corp. at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Du Barry Sportwear Manufacturing Corp., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

June 15, 1948.

Adjudicated Patent

(C. C. A. Ind.) Jones patent, No. 2,043,960, for electric welding, claims 1 to 9, 11 to 18, 20, 22 to 24, 26, and 27 *Held* valid; claims 18, 20, 22, and 23 *Held* infringed. *The Linde Air Products Company* v. *Graver Tank & Mfg. Co., Inc.*, 167 F.2d 531; 77 USPQ 207.

Disclaimer

2,288,916.—*Robert L. Muller*, Detroit, Mich. CALCULATING MACHINE. Patent dated July 7, 1942. Disclaimer filed June 12, 1948, by the assignee, *Burroughs Adding Machine Company*.

Hereby enters this disclaimer to claims 17, 18, and 19 of said patent.

Important Information

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:
Application as originally filed. (Petition, specification, oath, and drawings, as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)
Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)
Original application. (Facsimile petition, specification, oath, and drawings at present time.)
Specification as originally filed. (As received in Office.)
Specification as amended. (With amendments entered.)
Specification as allowed. (As passed by the Examiner for issue.)
Original specification. (Facsimile at present time.)
File-wrapper. (File-wrapper only.)
File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)
File-wrapper contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)
Assignment. (Give the liber and page of the record as well as the name of the inventor.)
Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)
Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Drawings

Attention is called to paragraphs *g* and *i* of Rule 52 of the Rules of Practice of the Patent Office, and inventors and attorneys are directed to omit from the space outside of the marginal line of the drawings any marks of identification, inasmuch as the space referred to is reserved for the use of the Patent Office. Such identifying marks should be placed upon the back of the drawings.

Applicant's Address

The requirement of Rule 13, that the post-office address of the applicant must be stated in the petition, means that the applicant must give the post-office address at which he customarily receives his mail.

The rule was made in order that the Office in necessary cases might correspond directly with the applicant and not through his attorney. The address of the attorney, with instructions to send communications to the applicant in his care will not be accepted as a compliance with this rule.

Photostat Copies

In ordering photostat copies of United States and foreign patents, when only the number of the patent is given, the whole patent, comprising specification and drawing, will be furnished, unless the order specifically states that the "specification only" or "drawing only" is required. Care should be taken in making out orders for foreign patents to give the year of the patent, as in old French and British patents the same number may appear in different years.

Notice Regarding Payment of Fees

All fees must be paid in advance. Payment of money required for Office fees *must* be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 194.)

Certified checks, bank drafts, express and foreign money orders must be immediately negotiable in this country and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

Examiners' Letters and Amendments

Examiners are directed to recite in each letter in an application the date of the action by the applicant to which it is a reply, and applicants are requested to indicate in their actions on an application the date of the last Office letter.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 1,927,442. TRUSSED STRUCTURE AND METHOD AND SHAPES THEREFOR. Patented Sept. 19, 1933. Reg. No. 9,733.

Pat. 1,927,443. APPARATUS FOR EXPANDING TRUSSED BEAMS. Patented Sept. 19, 1933. Reg. No. 9,734.

These two patents relate to methods and apparatus for fabricating truss beams and like structural shapes from I-beams, channels, and similar blank forms. An open lattice work beam is formed from an I-beam having a web portion and a thickened longitudinal rib. Staggered slits are cut on opposite sides of the rib so that adjacent overlapping slits having integral bonds are formed. When expanded with apparatus described in Patent 1,927,443, the thickened rib becomes extended and assumes a diagonal position integrally connected with the web. The method described in Patent 1,927,442 eliminates welding and results in a light-weight beam of greater strength than welded truss beams made according to previous methods. (Co-owner) James J. Shanley, 1212 Dupont Circle Bldg., Washington 6, D. C. Groups 33—12—81; 35—69.

Pat. 2,436,352. CALCULATING DEVICE. Patented Feb. 17, 1948. A compact computing device for multiplication, division, and the solution of right triangles. Includes a pair of spaced panel members, one transparent, through which the scales on the other panel are visible. Another scale is pivotally mounted between the panel members and has a longitudinal groove with a hairline at center. A pin-like member extends between the slides and projects into the grooves. Manufactured from transparent plastic material for visual registration of the various calibrations on the slides, scale, and panel members. (Owner) A. B. Downs, Jr., 419 South 6th St., Columbus, Miss. Groups 35—65; 39—81. Reg. No. 9,735.

Pat. 2,437,027. TIME DIVISION MULTIPLEX COMMUNICATION SYSTEM. Patented Mar. 2, 1948. A system for transmitting a number of messages in sound, picture, or code signals through a single transmission channel. A series of successive saw-tooth waves are produced under the control of received synchronizing signals. Electronic devices divide and collect parts of different communications and modulate them intermittently over a single carrier. A message signal amplifier for each recurrent period is connected in the output circuit of the demodulator under control of the relay tubes. If desired, there may be more than three communications, depending upon the frequency of the saw-tooth waves generated. (Owner) John H. Hemrighous, 1029 Wenonah Ave., Oak Park, Ill. Group 36—81. Reg. No. 9,736.

Pat. 2,437,636. CLOTHES-WASHING MACHINE. Patented Mar. 9, 1948. Washing machine has enclosed impeller blades upwardly curved to fit rounded bottom of tub, causing swirling effect in the washing fluid. Clothes are washed without coming in contact with the blades. Rotation of the impeller forces the washing fluid outwardly through slots in side of housing. The fluid flows upwardly until forced to descend through openings in the top of housing, where it is again recirculated by the impeller. A friction disk-type speed control is connected to the impeller. A driven disk has a beveled edge that contacts an adjustable drive disk operated by a rack moved by the speed control toward or away from the center of the driven disk. (Owner) John G. Becker, 833 Fedora St., Los Angeles 5, Calif. Group 35—81—62. Reg. No. 9,737.

Pat. 2,408,729. CUTTING MACHINE. Patented Oct. 8, 1946. A machine for cutting food products or other plastic material into small pieces of desired size and shape. The material is intermittently advanced through the machine by a conveyor belt. Pressure rollers reduce material to a predetermined thickness. Then, as the slab of material is advanced, a straight cutting blade severs it into strips of selected width. Horizontal rollers feed the strips beneath an angular blade portion which cuts the strips into pieces of desired size. A knocker attached to a sprocket rotatably mounted on one of the guides for the cutting blade pushes the pieces into a container. (Owner) Jesse W. Brackett, 159 Earle St., New Bedford, Mass. Group 35—51—59. Reg. No. 9,738.

Pat. 2,433,374. ELECTRIC FUEL HEATER FOR INTERNAL COMBUSTION ENGINES. Patented Dec. 30, 1947. An electric heater for installation in the carburetor of an internal combustion engine to temporarily heat the fuel and allow quick starting of a cold motor. The heating unit is preferably formed of four spaced parallel coiled resistance wires supported at each end by looped bridge pieces which allow the unit to expand and contract. One end of unit is attached to an electric circuit. A ground conductor coupled to the other lead of the heater connects the heater to the chassis of the vehicle. (Owner) Gustav H. Kruschke, Camp Douglas, Wis. Group 36—41. Reg. No. 9,739.

Dedicated Patents

The following 18 patents held by A. B. Dick Company, an Illinois corporation, have been dedicated to the people of the United States by instruments recorded in the United States Patent Office. The instruments read in part as follows: "• • • hereby assign, transfer, and dedicate to the People of the United States of America, the full and exclusive right in the United States Letters Patent Nos. • • •." Eighteen patents dedicated by the A. B. Dick Company were published in the June 29 issue of the OFFICIAL GAZETTE.

Pat. 2,018,501. STENCIL SHEET ASSEMBLY. Patented Oct. 22, 1935.

Pat. 2,085,384. CUSHION SHEET. Patented June 29, 1937. These two patents show stencil cushion sheets which render typing on the stencil sheet clearly visible, and produce a clear copy on the backing sheet. In Patent 2,085,384 the cushion sheet consists of a sheet of Yoshino paper carrying a small quantity of removable material

(which clings to the fibers without closing the interstices) of a color contrasting with the color of the stencil and backing sheet. Typing causes an interchange of position between this material and stencil coating and drives part of it onto the backing sheet. Groups 28—89; 39—55.

Pat. 2,040,916. ADHESIVE. Patented May 19, 1936. Transparent adhesive which may be applied by a brush or gumming machine is suitable for integrally joining moisture-proof sheets of regenerated cellulose and cellulose acetate. The adhesive, applied to at least one of the sheets to be united, softens the surface of the cellulosic material and forms a film which fuses with the softened material. On drying, this film becomes integral with the cellulosic material. Group 28—94.

Pat. 2,087,082. APPARATUS FOR PREPARING STENCILS. Patented July 13, 1937. Rectangular desk frame for use in preparing stencils has the usual translucent plate, releasably carried by a longitudinally adjustable carrier, to accommodate stencils of different sizes. Fixed scales on sides of frame facilitate adjustment of the plate to initial line of a particular stencil. Longitudinally slidable scales assist operator in inscribing drawings, tracings, etc. on stencil. Frame is provided with both removable and foldable legs and struts to support frame in inclined or flat position. Groups 25—32; 35—79.

Pat. 2,092,241. POWER TRANSMISSION. Patented Sept. 7, 1937. Variable power transmission consists of a motor-driven axially shiftable cone pulley connected by an endless belt to a V-grooved pulley. The inner face of the belt is inclined so that it has a tendency to climb toward the larger end of the cone pulley, thereby eliminating the necessity of providing belt guides. Group 35—66—79.

Pat. 2,092,242. DUPLICATING MACHINE. Patented Sept. 7, 1937. This patent shows means for maintaining pressure within a sealed ink chamber of a stencil drum either above or below atmospheric pressure to increase, retard or reverse the flow of ink through the drum. A manually controlled slidable valve is provided for selectively and adjustably connecting the ink chamber with either a source of air under pressure, or a source of vacuum. Group 35—79.

Pat. 2,108,549. SEPARATING AND FEEDING SHEETS. Patented Feb. 15, 1938. Sheet separating and feeding device for a stencil printing machine includes a friction separating member which separates a sheet at rear of a stack near usual stop member and buckles it forwardly between itself and a sheet feeding member. The feeding member exerts pressure on the sheet during separation, causing it to buckle, and thereafter moves to advance the sheet to the usual feed rollers. As soon as sheet is separated, a presser member descends on remainder of stack. Group 35—79.

Pat. 2,140,482. ART OF DUPLICATING. Patented Dec. 13, 1938. In this method of duplicating the stencil sheet consists of a fibrous sheet of paper impregnated with oil, and having either a yieldable or sandpaper backing. When struck by the type the fibers are reoriented to form embossed characters having valvular passages which permit the passage of ink more freely in one direction than in the other. Group 39—55.

Pat. 2,140,483. STENCIL. Patented Dec. 13, 1938. Stencil sheet consists of a cellulosic sheet (such as Cellophane) with a sandpaper backing. When sheet is struck with type, embossed characters are formed, the outlines of which contain many minute perforations through which ink may pass. Group 39—55.

Pat. 2,164,549. DUPLICATING MACHINE. Patented July 4, 1939. This patent shows a driving and speed-controlling device for conventional types of segmental feed rollers of stencil machines. A driven gear in mesh with a gear on the shaft carrying the segments is retarded and advanced by means of a cam and lever to produce the desired velocity for correct feeding speed of paper. Group 35—79.

Pat. 2,281,569. DUPLICATING MACHINE. Patented May 5, 1942. This patent shows apparatus in which printed sheets from a duplicating stencil printing machine are delivered into a combined receiving and separating unit. This unit, which consists of a bound book of leaves, may be quickly removed from machine and the prints supported during drying, while operation of the machine is continued with other units. The leaves are successively dropped to the proper level to receive single prints, and are thereafter lowered without being brought into immediate contact with the preceding leaves and prints. When the book is full, the machine automatically stops. Group 35—79.

Pat. 2,333,624. ART OF STENCILIZATION. Patented Nov. 9, 1943. For corrections or alterations in duplicating stencils, this ink-impervious material is in stick form and sufficiently solid to retain its form in handling, yet flows readily and smoothly, under the pressure of application, into the openings to be closed. Groups 28—83; 39—52.

Pat. 2,337,012. STENCIL SHEET AND METHOD OF MAKING SAME. Patented Dec. 14, 1943. Stencil sheet is adapted for use with a stylus or a typewriter. A porous base sheet is impregnated with a thin, fast-drying solution to produce a relatively hard layer within the base. When almost dry, the impregnated base is coated with a thicker, slow-drying solution which is compatible with the first solution. This results in a unitary, rather than a laminated, coating which is relatively hard on one side (displaceable by type blow) and relatively soft and fluent on the other side, readily displaced in use of a stylus. Groups 28—89; 39—55.

Pat. 2,385,613. INKS. Patented Sept. 25, 1945. This ink for stencil printing machines remains fluid and homogeneous when exposed to air for long periods, as when held in reservoir and absorbent pad of duplicating machine. It will dry rapidly upon application to an impression sheet, and is adapted for use on non-absorbent, sized, hard, or bond papers. Group 28—91—90.

Des. Pat. 91,523. DESIGN FOR A CASING FOR A DUPLICATING MACHINE. Patented Feb. 20, 1934. Group 35—79.

Application Serial No. 611,767. STENCIL SHEET ASSEMBLY. The allowed claims in this application relate to a flexible backing sheet of hard tough paper coated with a plastically deformable adhesive in which a layer of small, hard, round bodies are partially embedded. During stencilization the spaces between the bodies receive fibers and coating material displaced from the stencil sheet. The backing sheet also provides the proper degree of cushioning, eliminating the necessity of using a separate cushion sheet. Group 39—55.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 6, 1948

[VOL. 612. NO. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 511,628. ALCONON LENZNER, doing business as Lenzner Co., Pittsburgh, Pa. Filed Oct. 28, 1946.

MIRACLE SUDS

The word "Suds" is disclaimed.

FOR WASHING AND CLEANING POWDER FOR GENERAL HOUSEHOLD AND LAUNDRY USES.

Claims use since Mar. 12, 1941.

Ser. No. 517,314. LIQUID GLAZE, INCORPORATED, Lansing, Mich. Filed Feb. 11, 1947.

1847 Polish

No claim is made to the word "Polish" apart from the mark.

FOR POLISH FOR SILVER AND OTHER METALS AND FINE SURFACES.

Claims use since Aug. 1, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 492,794. FELIX C. RUSSELL, doing business as Cool Ocean Co., New Orleans, La. Filed Dec. 6, 1945.

The words "The Cool Antiseptic Lotion" and the word "Cool" appearing in each occurrence before the word "Ocean" are disclaimed.

FOR ANTISEPTIC LOTION FOR AFTER BATHING, AFTER SHAVING, FACIAL ASTRINGENT, MINOR CUTS, INSECT BITES, AND POISON IVY.

Claims use since Mar. 4, 1935.

Ser. No. 506,116. MACLEANS LABORATORIES, INC., Bloomfield, N. J. Filed July 23, 1946.

LUCOZATE

FOR MEDICATED TONIC FOOD BEVERAGE.

Claims use since June 10, 1946.

Ser. No. 508,706. BOYLE AND COMPANY, Los Angeles, Calif., assignor to Boyle and Company, Los Angeles, Calif., a corporation of California. Filed Sept. 9, 1946.

CALCIGEN

FOR PREPARATION CONTAINING BONE MEAL, VITAMIN B AND CONTROLLED FLUORINE, IN CAPSULE FORM, FOR CALCIUM AND PHOSPHORUS DEFICIENCY.

Claims use since Jan. 30, 1945.

Ser. No. 517,524. ROCHE-ORGANON INC., Nutley, N. J. Filed Feb. 14, 1947.

ANTIBASON

FOR MEDICAL PREPARATION FOR USE IN THE TREATMENT OF DISORDERS OF BASAL METABOLISM.
Claims use since Jan. 10, 1947.

Ser. No. 518,030. PARFUM L'ORLE, INC., New York, N. Y. Filed Feb. 24, 1947.

SPORTSWOMAN

FOR PERFUMES AND TOILET WATERS.
Claims use since January 1941.

Ser. No. 519,303. UNITED STATES VANADIUM CORPORATION, New York, N. Y. Filed Mar. 19, 1947.

"COL"

FOR INORGANIC COMPOUNDS OF METALS—NAMELY, AMMONIUM MOLYBDATE, MOLYBDIC OXIDE, AMMONIUM METAVANADATE, SODIUM MOLYBDATE, AMMONIUM PARATUNGSTATE, AND TUNGSTIC OXIDE.
Claims use since Oct. 31, 1945.

Ser. No. 519,403. MADELEINE VRAMANT BORN MADELEINE GIRAUD, Paris, France. Filed Mar. 21, 1947.

Madeleine Vramant

The mark consists of a facsimile of the signature of the applicant.
FOR PERFUMES.
Claims use since Jan. 1, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 497,453. CHICAGO SPECIALITY MANUFACTURING COMPANY, Chicago, Ill. Filed Mar. 1, 1946.

No claim is made to the words "Quality," "Plumbing Specialties" and "Service," apart from the mark.
FOR SHOWER BATH HEADS, TUBULAR TRAPS, CHROME FAUCET HANDLES, BIBB SCREWS AND NUTS, AND REPAIR PLUGS.
Claims use since Jan. 3, 1936.

CLASS 15

OILS AND GREASES

Ser. No. 488,767. MID-WEST REFINERIES, INC., Grand Rapids, Mich. Filed Sept. 20, 1945.

ATOMIC POWER

The word "Power" is disclaimed.
FOR GASOLINE AND HYDROCARBON FUELS FOR INTERNAL COMBUSTION ENGINES.
Claims use since Aug. 14, 1945.

Ser. No. 497,488. ARTHUR GEORGE MEISS, doing business as Inland Products Co., Roanoke, Va. Filed Mar. 1, 1946.

Duofilm
MODUSEAL

FOR MOTOR LUBRICATING OIL.
Claims use since Dec. 15, 1945.

Ser. No. 522,753. MCBRIDE REFINING COMPANY, INC., Edinburg, Tex. Filed May 21, 1947.

Flo-matic

FOR MOTOR FUEL OIL AND AN OIL FOR LUBRICATING PURPOSES.
Claims use since January 1946.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 503,479. SWITZER BROTHERS, Cleveland, Ohio, assignor to Switzer Brothers, Inc., Cleveland, Ohio, a corporation of Ohio. Filed June 7, 1946.

Glo-Craft

The prefix "Glo" is disclaimed.
FOR FLUORESCENT READY-MIXED PAINTS, LACQUERS, LACQUER-ENAMELS AND WATER COLORS.
Claims use since Mar. 20, 1946.

Ser. No. 504,768. HOUSEHOLD PAPER PRODUCTS CO., Detroit, Mich. Filed June 28, 1946.

FOR FLOOR WAX AND FURNITURE POLISH.
Claims use since Dec. 19, 1945.

Ser. No. 512,349. STANDARD OIL COMPANY, Whiting, Ind., and Chicago, Ill. Filed Nov. 9, 1946.

INDOCENE

FOR HIGH-BOILING AROMATIC OILS AND THEIR FRACTIONS, USED AS SOLVENTS AND THINNERS IN OLEO-RESINOUS PAINTS, VARNISHES, AND ENAMELS.
Claims use since Jan. 29, 1946.

Ser. No. 513,436. THE MERCHANTS CHEMICAL COMPANY, Stamford, Conn. Filed Nov. 29, 1946.

DYNA-CLAD

FOR CORROSION RESISTANT PAINT.
Claims use since Nov. 11, 1946.

Ser. No. 513,474. HERMAN G. STRAUSS, doing business as Velva-Sheen Co., Denver, Colo. Filed Nov. 29, 1946.

Fiesta

FOR FURNITURE AND FLOOR POLISHES AND WAXES.
Claims use since Oct. 15, 1946.

Ser. No. 513,616. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y. Filed Dec. 3, 1946.

FOR WHITE TIRE COATING IN THE NATURE OF A PAINT; BLACK TIRE PAINT, AUTOMOBILE POLISH AND CLEANER, AND AUTO WAX.
Claims use since Oct. 28, 1946.

Ser. No. 515,789. POWERAIRE CORPORATION, doing business as Poweraire Laboratories, Chicago, Ill. Filed Jan. 15, 1947.

Turpolene

FOR PAINT THINNER.
Claims use since May 13, 1946.

Ser. No. 516,808. ATLANTIC CALSOMINE CO., INC., Brooklyn and New York, N. Y. Filed Feb. 3, 1947.

SETRILUX

The stippling in the drawing is for color shading only.
FOR PAINT ENAMELS.
Claims use since Dec. 12, 1946.

Ser. No. 518,791. STANDARD OIL COMPANY OF CALIFORNIA, Wilmington, Del., and San Francisco, Calif. Filed Mar. 10, 1947.

SOCAL

FOR DILUENTS FOR USE IN THE MANUFACTURE OF LACQUERS AND LACQUER THINNERS.
Claims use since November 1934.

Ser. No. 521,014. INDUSTRIAL CHEMICAL DEVELOPMENT CORP., New York, N. Y. Filed Apr. 19, 1947.

I-C-D FORMULA 9

The term "Formula 9" is disclaimed apart from the mark.
FOR PAINT REMOVER COMPOUND.
Claims use since Jan. 1, 1940.

Ser. No. 521,563. DAVIS PAINT CO., Kansas City, Mo. Filed Apr. 30, 1947.

DA-SPAR

The term "Spar" is disclaimed apart from the mark.
FOR VARNISH.
Claims use since April 1932.

Ser. No. 522,448. TRI-STATE PAINT & CHEMICAL CO., Oklahoma City, Okla. Filed May 15, 1947.

PETROPINE

FOR PAINT THINNER.
Claims use since May 1932.

Ser. No. 522,729. WALTER N. BOYSEN CO., Oakland, Calif. Filed May 20, 1947.

KORO-SEAL

Applicant disclaims the word "Seal" apart from the mark.
FOR SEALER USED ALONE OR ADMIXED WITH PAINT OR OIL AND AS A VEHICLE FOR METAL POWDERS.
Claims use since July 1936.

ABBEY
RENTS

FOR CANVAS AND METAL BACK RESTS SOLD OR RENTED FOR THERAPEUTIC USES ONLY TO SUPPORT THE PATIENT IN A SITTING-UP POSITION IN CASES OF CARDIAC FAILURE OR PULMONARY INFECTION AND FOR THE PURPOSE OF FACILITATING THE FEEDING OF BEDRIDDEN PATIENTS; BALKAN FRAMES; BRADFORD FRAMES; BRADFORD TURNERS USED AS AN AID FOR RENDERING BEDPAN SERVICE TO PATIENTS IN FULL PELVIC CASTS AND FACILITATING TURNING OF PATIENTS BY ATTENDANTS; DOUBLE CRANK BEDS AND DOUBLE CRANK CHILD'S BEDS SOLD AND RENTED AS HOSPITAL BEDS HAVING CRANKS BY WHICH THE HEAD AND FOOT OF THE BED MAY BE ADJUSTED; DECKERT BEDS WHICH ARE INNOVATIONS OVER THE STANDARD TYPE TWO-CRANK HOSPITAL BEDS IN THAT BY MEANS OF A THIRD CRANK FURTHER ADJUSTMENT OF THE BED IS PERMISSIBLE; FOUR-PIECE FRACTURE BEDS; HAND ADJUSTABLE BEDS WHEREIN THE HEAD AND FOOT OF THE BED ARE ADJUSTABLE BY HAND RATHER THAN BY CRANK; VASOCILLATOR BEDS USED TO AID CIRCULATORY DISTURBANCES; BREAST PUMPS; BURDICT CONSTRICTORS USED IN THE TREATMENT OF VASCULAR AND CIRCULATORY DISEASES; COLLWIL CONSTRICTORS USED IN THE TREATMENT OF VASCULAR AND CIRCULATORY DISEASES, HYPEREXTENSION FRAMES; BABY INCUBATORS DESIGNED TO MAINTAIN CONSTANT TEMPERATURE HIGHER THAN ROOM TEMPERATURE AND FREE OF MOISTURE AND TO ADMINISTER OXYGEN; INHALATORS; COLD QUARTZ LAMPS; COLTAN LAMPS, I. E., LAMPS OF THE ULTRA-VIOLET BULB TYPE FOR THE PURPOSE OF INCREASING VITAMIN D DEFICIENCY, THE ASSIMILATION OF CALCIUM, TO INCREASE BODY METABOLISM, AND AS A BACTERICIDAL AGENT; LAMPS FOR THE PURPOSE OF REMOVING MOISTURE CONTENT FROM THE AIR HELPFUL IN THE TREATMENT OF ASTHMA AND DISEASES OF THE UPPER RESPIRATORY TRACT; LAMPS OF THE ULTRA-VIOLET BULB TYPE; INFRA-RED LAMPS; MERCURY QUARTZ LAMPS; SUN LAMPS; STUPE KETTLES; DENTAL, MEDICAL AND SURGICAL INSTRUMENT TABLES AND MASSAGE TABLES; BUCK EXTENSIONS EACH CONSISTING OF A SERIES OF PULLEYS SUPPORTED BY A FRAME ATTACHABLE TO A BED AND USED FOR BONE ALIGNMENT IN THE CASE OF LOWER EXTREMITY FRACTURES; TRAPEZES CONSISTING OF OVERHEAD FRAMES ATTACHABLE TO HOSPITAL BEDS USED FOR EXERCISE BARS FOR BEDRIDDEN PATIENTS; AND INVALID WALKERS.
Claims use on Canvas Back Rests since Jan. 1, 1935; on Metal Back Rests since Jan. 1, 1940; on Balkan Frames since Jan. 1, 1940; on Bradford Frames since Jan. 1, 1938; on Bradford Turners since Jan. 1, 1938; on Double Crank Child's Beds since Jan. 1, 1938; on Deckert Beds since Jan. 1, 1944; on Double Crank Beds since Jan. 1, 1935; on Four-Piece Fracture Beds since Jan. 1, 1935; on Hand Adjustable Beds since Jan. 1, 1940; on Vasocillator Beds since Jan. 1, 1940; on Breast Pumps since Jan. 1, 1940; on Burdict Constrictors since Jan. 1, 1940; on Collwil Constrictors since Jan. 1, 1940; on Hyperextension Frames since Jan. 1, 1941; on Incubators since Jan. 1, 1940; on Inhalators since Jan. 1, 1940; on Cold Quartz Lamps since Jan. 1, 1938; on Coltan Lamps since Jan. 1, 1938; on Lamps for the purpose of removing moisture content from the air, helpful in the treatment of asthma and diseases of the upper respiratory tract, since Jan. 1, 1942; on Lamps of the ultraviolet bulb type since Jan. 1, 1942; on Infra-Red Lamps since Jan. 1, 1940; on Mercury Quarts Lamps since Jan. 1, 1938; on Sun Lamps since Jan. 1, 1938; on Stupe Kettles since Jan. 1, 1943; on Dental, Medical and Surgical Instrument Tables and Massage Tables since Jan. 1, 1938; on Buck Extensions since Jan. 1, 1936; on Trapeses since Jan. 1, 1938; and on Invalid Walkers since Jan. 1, 1938.

Ser. No. 500,231. THE LINDE AIR PRODUCTS COMPANY, New York, N. Y. Filed Apr. 15, 1946.

LINDE

FOR OXYGEN THERAPY REGULATORS.
Claims use since about 1933.

Ser. No. 507,902. THE B. F. GOODRICH COMPANY, New York, N. Y., and Akron, Ohio. Filed Aug. 23, 1946.

Koroseal

FOR IMPERVIOUS SHEETING FOR GENERAL MEDICAL AND HOSPITAL USE.
Claims use since 1937.

Ser. No. 520,803. GOODMAN-KLEINER CO., INC., New York, N. Y. Filed Apr. 16, 1947.

GYNOGAUGE

FOR MEDICAL DEVICE USED IN DIAGNOSIS AND TREATMENT FOR FEMALE STERILITY.
Claims use since Jan. 10, 1947.

Ser. No. 520,804. GOODMAN-KLEINER CO., INC., New York, N. Y. Filed Apr. 16, 1947.

GYNOGRAPH

FOR MEDICAL DEVICE USED IN DIAGNOSIS AND TREATMENT FOR FEMALE STERILITY.
Claims use since Jan. 10, 1947.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 494,245. UNIVERSAL MILLS, Fort Worth, Tex. Filed Jan. 3, 1946.

White Vase

The descriptive word "White" is disclaimed apart from the mark.
FOR WHITE WHEAT FLOUR.
Claims use since Feb. 15, 1944.

Ser. No. 511,543. EAST-SIDE FRUIT GROWERS, Lodi, Calif. Filed Oct. 26, 1946.

EAST-SIDE FRUIT GROWERS

The words "Fruit Growers" are disclaimed.
FOR FRESH GRAPES.
Claims use since Sept. 5, 1946.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 39.1 to 39.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 558,766. AGICIDE LABORATORIES, INC., Los Angeles, Calif. Filed May 24, 1948.

AGRALITE

FOR AGRICULTURAL BASE PLASTIC MOULDING COMPOUND, AS A PARTIALLY PREPARED MATERIAL FOR INDUSTRIAL USES.
Claims use since July 12, 1946.

CLASS 2

RECEPTACLES

Ser. No. 498,108. CHANNING R. BLATCHFORD, Battle Creek, Mich. Filed Sept. 11, 1947.

The lining on the drawing is used for shading purposes only, and the word "Tabby" as well as the representation of the goods are disclaimed.
FOR SANITARY TOILET PANS FOR ANIMALS SUCH AS CATS.
Claims use since Mar. 5, 1946.

Ser. No. 520,260. BUKWAGEN-HENKIN INDUSTRIES, Memphis, Tenn. Filed Sept. 27, 1947.

Magican

The syllable "Can" is disclaimed.
FOR GARBAGE CANS.
Claims use since Mar. 24, 1947.

Ser. No. 535,658. VULCAN TIN CAN CO., Bellwood, Ill. Filed Sept. 24, 1947.

VULCAN

FOR TIN CANS.
Claims use since January 1945.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 542,676. ABEL & RACH, INC., Milwaukee, Wis. Filed Dec. 8, 1947.

ABC

FOR SUITCASES.
Claims use since Feb. 15, 1946.

Ser. No. 543,712. HARTMANN COMPANY, Racine, Wis. Filed Dec. 8, 1947.

FOURSOME

FOR SUITCASES, HAND LUGGAGE CASES EQUIPPED WITH GARMENT CARRYING FIXTURES, AND WARDROBE SUITCASES.
Claims use since Nov. 28, 1947.

Ser. No. 545,125. FUTURE PRODUCTS, INC., Chicago, Ill. Filed Dec. 22, 1947.

FOR KEY CASES.
Claims use since Oct. 29, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 509,317. ADCO, INC., Sedalia, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

KLEAN SHYNE

FOR LIQUID SCRUBBING COMPOUNDS FOR REMOVING DIRT OR GREASE FROM SURFACES.
Claims use since 1923.

Ser. No. 531,630. U. S. SANITARY SPECIALTIES CORPORATION, Chicago, Ill. Filed Aug. 16, 1947. Under section 2f of the act of 1946.

Shynebrite

Applicant claims ownership of registration No. 308,824.
FOR METAL POLISH.
Claims use since Aug. 4, 1926.

Ser. No. 533,105. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

CLOMAK

FOR DETERGENT COMPOUND FOR WASHING AND CLEANING TEXTILE FABRICS.
Claims use since Feb. 20, 1947.

Ser. No. 533,106. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

PAWNEE

FOR DETERGENT COMPOUND FOR WASHING AND CLEANING TEXTILE FABRICS.
Claims use since Aug. 19, 1946.

Ser. No. 534,051. RABY BROTHERS, York, Pa. Filed Sept. 10, 1947.

No claim is made to the pictorial representation of the hands, apart from the mark.
FOR WATERLESS HAND CLEANER.
Claims use since July 1, 1947.

Ser. No. 534,711. ADCO, INC., Sedalia, Mo. Filed Sept. 17, 1947.

400

FOR LIQUID DRY CLEANING SOAP USED EXCLUSIVELY FOR CLEANING GARMENTS IN A NAPTHA BATH.
Claims use since June 20, 1939.

Ser. No. 539,963. LES PARFUMS DE DANA, INC., New York, N. Y. Filed Nov. 3, 1947.

PERFIDE

FOR TOILET SOAPS.
Claims use since Oct. 24, 1947.

Ser. No. 545,037. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Dec. 20, 1947.

APOLLO

Applicant claims ownership of registration No. 37,092.
FOR SUDSING CLEANER, CLEANSER AND DETERGENT.
Claims use since Nov. 26, 1947.

Ser. No. 547,142. DANIEL FISHER NEALON, doing business as Nealon Soap Company, Paris, Tenn. Filed Jan. 15, 1948.

UNCLE DAN'S

FOR SOAP.
Claims use since Dec. 9, 1947.

Ser. No. 548,230. B AND G CHEMICAL CORPORATION, Baltimore, Md. Filed Jan. 29, 1948.

B&G PRODUCT PiP

The words "A" and "Product" are disclaimed.
FOR CLEANSING CREAM TO BE APPLIED TO THE HANDS FOR REMOVING INK BY SUBSEQUENT RINSING OFF WITH WATER.
Claims use since Nov. 28, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 493,206. MULTICORE SOLDERS LIMITED, London, England. Filed Aug. 20, 1947.

ERSIN

Applicant claims ownership of Great Britain registration No. 610,394 (renewed).
FOR FLUXES USED IN SOLDERING, BRAZING AND WELDING OPERATIONS ON METALLIC MATERIALS.
Claims use since 1939.

Ser. No. 505,301. HORTON & CONVERSE, Los Angeles, Calif. Filed Sept. 22, 1947.

BOROCREME

FOR BORATED OINTMENT FOR RELIEVING BURNS, ABRASIONS, AND CHAPPING.
Claims use since June 24, 1946.

Ser. No. 515,787. POLK MILLER PRODUCTS CORP., Richmond, Va. Filed Oct. 28, 1947.

The drawing is lined for red and yellow coloring. Applicant claims ownership of registrations Nos. 331,357, 284,640, 331,624, 300,694, and 345,687.
FOR MANGE MEDICINE.
Claims use since July 24, 1946.

Ser. No. 517,576. HEYDEN CHEMICAL CORPORATION, New York, N. Y. Filed Aug. 14, 1947.

COLLARGOL

Applicant claims ownership of registration No. 32,452.
FOR COLLOIDAL METAL PREPARATIONS—NAMELY, COLLOIDAL SILVER PREPARATIONS HAVING ASTRINGENT, ANTISEPTIC, FUNGICIDAL AND BACTERIOSTATIC PROPERTIES AND BEING USEFUL FOR THE TREATMENT OF SINUSITIS, CYSTITIS, GONORRHEA AND SIMILAR DISORDERS.
Claims use since Nov. 23, 1898.

Ser. No. 522,522. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947.

ULTRATONE

FOR PHOTOGRAPHIC DEVELOPER.
Claims use since Apr. 21, 1947.

Ser. No. 527,537. E. S. MILLER LABORATORIES, INC., Los Angeles, Calif. Filed July 5, 1947.

VI-EA

The term "EA" is disclaimed.
FOR VITAMIN E.
Claims use since Apr. 14, 1947.

Ser. No. 528,486. JONES & LAUGHLIN STEEL CORPORATION, Pittsburgh, Pa. Filed July 12, 1947.

J&L

FOR AMMONIUM SULPHATE.
Claims use since 1940.

Ser. No. 528,496. LES PARFUMS NORANTE, SOCIETE A RESPONSABILITE LIMITEE, Melun, France. Filed July 12, 1947.

CHER SECRET

Applicant claims ownership of French registration No. 640, dated Feb. 26, 1914.
FOR PERFUMES, TOILET WATERS, ROUGE, LIPSTICK, AND FACE CREAMS.

Ser. No. 528,623. THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio. Filed July 15, 1947.

GOODYEAR

FOR ANTI-FREEZE SOLUTION, RADIATOR FLUSH, RADIATOR STOP LEAK, RUST INHIBITOR, LIQUID RADIATOR SOLDER, FIRE EXTINGUISHER FLUID, AND HYDRAULIC BRAKE FLUID.
Claims use on Anti-freeze Solution since Oct. 20, 1936; on Radiator Flush since June 11, 1937; on Radiator Stop Leak since June 11, 1937; on Rust Inhibitor since May 23, 1944; on Liquid Radiator Solder since Feb. 12, 1945; on Fire Extinguisher Fluid since May 23, 1944; and on Hydraulic Brake Fluid since May 23, 1944.

Ser. No. 529,444. H. F. DREW & CO., INC., New York, N. Y. Filed July 25, 1947.

BIG "G"

FOR GERMICIDE PARTICULARLY ADAPTED FOR SANITIZING WALLS, FLOORS, UTENSILS, AND OTHER DAIRY EQUIPMENT.
Claims use since Jan. 2, 1947.

Ser. No. 531,435. BRITISH SCHERING LIMITED, London, England. Filed Aug. 15, 1947.

TESTO-VIRON

Applicant claims ownership of British registration No. 571,838, dated Sept. 28, 1936.
FOR HORMONE PREPARATION FOR USE IN THE TREATMENT OF ANDROGEN DEFICIENCY.

Ser. No. 531,436. BRITISH SCHERING LIMITED, London, England. Filed Aug. 15, 1947.

ALBUCID

Applicant claims ownership of Great Britain registration No. 601,239, dated Sept. 22, 1938.
FOR SULPHONAMIDE PREPARATION FOR USE IN THE TREATMENT OF RENAL INFECTIONS AND LOCAL INFECTIVE CONDITIONS OF THE EYE, SKIN, AND MUCOUS MEMBRANES.

Ser. No. 531,528. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

TIRA

Applicant claims ownership of registration No. 176,373.
FOR SULPHUR.
Claims use since Mar. 7, 1922.

Ser. No. 531,530. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

GOLDEN 90

FOR INSECTICIDES.
Claims use since Apr. 7, 1935.

Ser. No. 531,531. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

Golden

FOR INSECTICIDES.
Claims use since Aug. 17, 1937.

Ser. No. 531,535. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

TUBE

Applicant claims ownership of registration No. 176,372.
FOR SULPHUR.
Claims use since Mar. 7, 1922.

Ser. No. 531,536. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

PERFECTION

Applicant claims ownership of registration No. 260,412.
FOR SULPHUR.
Claims use since Aug. 18, 1924.

Ser. No. 531,537. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

HI SPRED

FOR SPREADER FOR INSECTICIDES.
Claims use since July 2, 1937.

Ser. No. 531,724. LUCILA SALAZAR, doing business as Los Angeles Pharmacal Company, Los Angeles, Calif. Filed Aug. 18, 1947.

No claim is made to the word "Dent" apart from the mark.
FOR PREPARATION FOR THE CARE OF SORE, INFLAMED AND BLEEDING GUMS.
Claims use since Aug. 1, 1947.

Ser. No. 532,262. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Aug. 25, 1947.

BIOLATOR

FOR ANTI-BIOTICS, ANTIHISTAMINICS, SULFA DRUGS, HORMONES AND BIOLOGICAL PRODUCTS TO BE ADMINISTERED BY INSUFFLATION AND INHALATION.
Claims use since July 18, 1947.

Ser. No. 532,361. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 25, 1947. Under section 2f of the act of 1946.

Stauffer

Applicant claims ownership of registrations Nos. 405,008, 406,143, 409,326, and 409,493.
FOR ALUMINUM CHLORIDE, ALUMINUM SULPHATE, AMMONIA ALUM, ANHYDROUS BORAX, ANHYDROUS HYDROCHLORIC ACID, BICARBONATE OF SODA, BORAX, BORAX GLASS, BORIC ACID, CARBON BISULPHIDE, CARBON TETRACHLORIDE, CAUSTIC SODA, CHLORINE, CITRIC ACID, COPPERAS, CREAM OF TARTAR, FERRIC SULPHATE, FIRE EXTINGUISHER FLUID, FUNGICIDES, GLAUBER'S SALT, INSECTICIDES, IRON OXIDE, MURIATIC ACID, NITRATE OF POTASH, NITRATE OF SODA, NITRIC ACID, FUMING SULPHURIC ACID, PERCHLORETHYLENE, POTASH ALUM, POWDERED SULPHUR, ROCHELLE SALT, ROLL SULPHUR, SAL SODA, SILICON TETRACHLORIDE, SODIUM HYDROSULPHIDE, SUBLIMED SULPHUR, SULPHATE OF SODA, SULPHUR CHLORIDE, SULPHURIC ACID, TARTAR EMETIC, TARTARIC ACID, TEXTILE STRIPPER, TITANIUM TETRACHLORIDE, AND WHITING.
Claims use since Jan. 1, 1885.

Ser. No. 534,191. JOHN E. RESPONDEK, doing business as Zarra, Detroit, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

ZARRA

Applicant claims ownership of registration No. 421,678.
FOR LAXATIVE IN POWDERED FORM.
Claims use since July 1, 1940.

Ser. No. 535,288. H. KIRK WHITE AND COMPANY, Oconomowoc, Wis. Filed Sept. 22, 1947.

CLEAT

FOR CHEMICAL SOOT REMOVER.
Claims use since June 2, 1947.

Ser. No. 535,645. HOUBIGANT, INC., New York, N. Y. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

LA ROSE FRANCE

FOR PERFUME EXTRACT, FACE POWDER, EAU DE TOILETTE, AND EAU DE COLOGNE.
Claims use since April 1921.

Ser. No. 537,673. BETON CHEMICALS, INC., Los Angeles, Calif. Filed Oct. 13, 1947.

ALKRON

FOR INSECTICIDES.
Claims use since Sept. 19, 1947.

Ser. No. 537,731. S. PFEIFFER MFG. CO., St. Louis, Mo. Filed Oct. 13, 1947. Under section 2f of the act of 1946.

Sett

Applicant claims ownership of registration No. 391,539.
FOR DENTAL PLATE POWDER.
Claims use since Aug. 15, 1940.

Ser. No. 537,912. LUDEN'S INC., Reading, Pa. Filed Oct. 15, 1947. Under section 2f of the act of 1946.

LUDEN'S

Applicant claims ownership of registration No. 150,455.
FOR COUGH DROPS.
Claims use since 1905.

Ser. No. 538,751. THE GLOBENITE COMPANY, Findlay, Ohio. Filed Oct. 23, 1947. Under section 2f of the act of 1946.

DR. DRAKE'S

Applicant claims ownership of registrations Nos. 50,020, 91,656, and 208,715.
FOR COUGH AND CROUP REMEDY.
Claims use since Oct. 1, 1889.

Ser. No. 538,931. HOUBIGANT, INC., New York, N. Y. Filed Oct. 24, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 390,066 and 394,399.
FOR PERFUME AND TOILET WATER, FACE POWDER, TALCUM POWDER, DUSTING POWDER, BATH SALTS, BRILLIANTINE, BANDOLINE, ROUGE, LIPSTICKS, PERFUME SACHET IN POWDER FORM, COLD CREAMS, LOTION FOR THE SKIN AND HAIR, POWDER AND ROUGE COMPACTS.
Claims use since June 1940.

Ser. No. 539,064. LUCIEN LELONG, INC., Chicago, Ill. Filed Oct. 25, 1947.

SAHARA

FOR PERFUME.
Claims use since Oct. 7, 1947.

Ser. No. 539,138. DOYLE LABORATORIES, INC., Santa Monica, Calif. Filed Oct. 27, 1947.

TANUP

FOR SUNBURN PREVENTIVE LOTION.
Claims use since June 7, 1947.

Ser. No. 539,189. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Oct. 27, 1947.

THERACEBRIN

FOR MEDICINAL PREPARATION OF PAN-VITAMINS, THERAPEUTIC, USED IN THE TREATMENT OF NUTRITIONAL DEFICIENCIES.
Claims use since Sept. 15, 1947.

Ser. No. 539,509. FLEET OIL COMPANY, La Follette, Tenn. Filed Oct. 30, 1947.

CARGO

FOR ANTI-FREEZE COMPOUND.
Claims use since Oct. 4, 1945.

Ser. No. 539,965. LES PARFUMS DE DANA, INC., New York, N. Y. Filed Nov. 3, 1947.

PERFIDE

FOR PERFUME, TOILET WATERS, LIPSTICKS, FACE POWDERS, TOILET CREAMS, AND ROUGE.
Claims use since Oct. 24, 1947.

Ser. No. 540,540. OTIS E. GLIDDEN & CO., INCORPORATED, Evanston, Ill. Filed Nov. 8, 1947.

ZymenoL

Applicant claims ownership of registration No. 300,863.
FOR YEAST CULTURES IN MINERAL OIL AND AGAR AGAR EMULSION FOR TREATMENT OF CONSTIPATION.
Claims use since Aug. 1, 1933.

Ser. No. 540,797. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Nov. 12, 1947.

CYANOFLAKE

FOR SODIUM CYANIDE USED PRINCIPALLY IN THE MANUFACTURE OF OTHER CHEMICALS.
Claims use since Oct. 10, 1947.

Ser. No. 541,271. ELMO SALES CORPORATION, Philadelphia, Pa. Filed Nov. 15, 1947.

Photo Finish

Applicant claims ownership of registrations Nos. 393,231 and 406,178.
FOR MAKE-UP POWDER, FACE CREAMS, FACE LOTIONS, FACE POWDER, LIPSTICKS, ROUGE, MASCARA, EYE SHADOW, DEODORANTS, HAND CREAMS AND HAND LOTIONS.
Claims use since Sept. 15, 1941.

Ser. No. 543,476. WILLIAM W. LEE & CO., INC., Watervliet, N. Y. Filed Dec. 5, 1947.

S.T.B.

FOR PREPARATIONS FOR COLDS AND RESPIRATORY ILLS OF POULTRY AND BIRDS.
Claims use since Oct. 31, 1947.

Ser. No. 544,692. BENZOL PRODUCTS COMPANY, Newark, N. J. Filed Dec. 18, 1947.

Lithoquin

FOR COMPOUND LITHIUM OXYQUINOLINATE.
Claims use since Oct. 29, 1947.

Ser. No. 544,811. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

BARTYL

Applicant claims ownership of registration No. 385,114.
FOR ANTISKINNING PRODUCTS USED IN THE MANUFACTURE OF PAINTS, VARNISHES, AND PRINTING INKS; FIXATIVE AND AROMA-IMPARTING INGREDIENTS IN PERFUMES.
Claims use since June 12, 1936.

Ser. No. 544,812. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

CIDAN

Applicant claims ownership of registration No. 390,371.
FOR CHEMICAL PRODUCTS USED AS DISINFECTANT BASES AND WHICH ARE NOT SUITABLE FOR USE AS A LIQUID INSECTICIDE CONTACT SPRAY AND FUNGICIDE.
Claims use since Nov. 2, 1939.

Ser. No. 544,813. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

DELTYL

Applicant claims ownership of registration No. 385,115.
FOR NORMALLY LIQUID ORGANIC CHEMICAL PRODUCTS USED IN PERFUME, COSMETIC, AND MEDICINAL PREPARATIONS; NORMALLY LIQUID ORGANIC CHEMICAL PRODUCTS USED AS SOLVENTS FOR FLAVORING INGREDIENTS.
Claims use since Apr. 7, 1937.

Ser. No. 544,814. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

MOSKENE

Applicant claims ownership of registration No. 383,096.
FOR CHEMICAL PRODUCTS USED AS A PERFUME INGREDIENT.
Claims use since Mar. 2, 1934.

Ser. No. 544,815. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

MUSK TIBETENE

The term "Musk" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 386,116.
FOR CHEMICAL PRODUCT USED AS PERFUME INGREDIENT.
Claims use since Apr. 28, 1936.

Ser. No. 544,817. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

BROMOSOLV

Applicant claims ownership of registration No. 385,241.
FOR DYE-CONTAINING LIQUIDS USED IN COSMETIC COMPOSITIONS—NAMELY, CHEEK- AND LIP-COLORING PREPARATIONS AND THE LIKE.
Claims use since Oct. 8, 1940.

Ser. No. 544,818. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

AURANTIOL

Applicant claims ownership of registration No. 387,050.
FOR ODORIFEROUS LIQUID MATERIAL, PERFUME BASE.
Claims use since Feb. 14, 1929.

Ser. No. 544,819. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

PARADOR

Applicant claims ownership of registration No. 387,051.
FOR ODORIFEROUS MATERIAL, ODORANTS FOR TEXTILES AND RUBBER GOODS.
Claims use since Aug. 10, 1933.

Ser. No. 544,820. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

ODRENE

Applicant claims ownership of registration No. 387,052.
FOR ODORIFEROUS MATERIAL, ODORANTS FOR SPRAYS AND INSECTICIDES.
Claims use since Nov. 4, 1927.

Ser. No. 544,821. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

NEANTINE

Applicant claims ownership of registration No. 387,053.
FOR SOLVENT, PERFUME INGREDIENT.
Claims use since Sept. 27, 1926.

Ser. No. 544,822. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

HYDROLAL

Applicant claims ownership of registration No. 387,054.
FOR ODORIFEROUS LIQUID MATERIAL, SOAP BASE PERFUMES.
Claims use since June 22, 1927.

Ser. No. 544,823. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

BUXINE

Applicant claims ownership of registration No. 387,055.
FOR ODORIFEROUS LIQUID MATERIAL, PERFUMES.
Claims use since Aug. 20, 1926.

Ser. No. 544,824. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

FOLIONE

Applicant claims ownership of registration No. 387,056.
FOR ODORIFEROUS LIQUID MATERIAL, PERFUMES.
Claims use since Aug. 4, 1926.

Ser. No. 544,825. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

TEX-O-DOR

The term "O-Dor" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 388,016.
FOR ODORIFEROUS LIQUID MATERIAL, ODORANT FOR TEXTILE GOODS.
Claims use since Mar. 19, 1931.

Ser. No. 544,826. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

SAVAROME

Applicant claims ownership of registration No. 387,057.
FOR ODORIFEROUS LIQUID MATERIAL, GENERAL ODORANTS.
Claims use since Mar. 11, 1933.

Ser. No. 544,827. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

SASSENE

Applicant claims ownership of registration No. 387,058.
FOR ODORIFEROUS LIQUID MATERIAL, GENERAL ODORANTS.
Claims use since June 8, 1934.

Ser. No. 544,828. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

NACENE

Applicant claims ownership of registration No. 387,059.
FOR AROMATIC MATERIAL USED AS ODORANT OR DEODORANT IN FLY SPRAYS AND INSECTICIDES.
Claims use since Jan. 18, 1935.

Ser. No. 544,829. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

LAURATONE

Applicant claims ownership of registration No. 387,060.
FOR ODORIFEROUS LIQUID MATERIAL, SOAP BASE PERFUMES.
Claims use since Nov. 14, 1939.

Ser. No. 544,830. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

KEROZONE

Applicant claims ownership of registration No. 393,439.
FOR AROMATIC MATERIAL USED AS A DEODORANT OR ODORANT, SOLD BY IT FOR USE BY MANUFACTURERS OR PROCESSORS OF KEROSENE-CONTAINING COMPOSITIONS, SUCH AS FLY SPRAYS.
Claims use since Mar. 2, 1936.

Ser. No. 544,831. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

KEROSCENT

Applicant claims ownership of registration No. 387,061.
FOR AROMATIC MATERIAL USED AS A DEODORANT OR ODORANT, FOR EXAMPLE IN FLY SPRAYS.
Claims use since Jan. 30, 1936.

Ser. No. 544,832. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

KERODOR

Applicant claims ownership of registration No. 387,062.
FOR AROMATIC MATERIAL USED AS A DEODORANT OR ODORANT, FOR EXAMPLE IN FLY SPRAYS.
Claims use since Dec. 5, 1933.

MULTI-VI

FOR VITAMINS IN TABLET FORM, CAPSULE FORM AND LIQUID FORM.
Claims use since Oct. 25, 1939.

Reg. No. 376,922. Registered Apr. 9, 1940. ENDO PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VIFORT

FOR MEDICINAL PREPARATION USED TO SUPPLY VITAMIN A, B, C, D IN ONE TRUE SOLUTION.
Claims use since Aug. 1, 1939.

Reg. No. 376,962. Registered Apr. 9, 1940. WHITE LABORATORIES, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

FLO-DEE

FOR SOLUTION CONTAINING VITAMINS A AND/OR D.
Claims use since Dec. 4, 1939.

Reg. No. 377,419. Registered May 7, 1940. DALAS MEDICAL LABORATORIES, INC., New York, N. Y. Republished by White Laboratories, Inc., Newark, N. J., a corporation of New Jersey.

TODYNE

FOR EAR DROPS.
Claims use since Dec. 28, 1938.

Reg. No. 388,024. Registered June 10, 1941. BARRON BROS. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

SURGE

FOR LIQUID FLY SPRAY OR INSECTICIDE.
Claims use since Feb. 22, 1940.

Reg. No. 388,308. Registered June 17, 1941. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

COV-O-RITE

FOR GUM ARABIC SOLUTION USED TO PROTECT LITHOGRAPHIC PLATES WHEN NOT IN USE.
Claims use since Nov. 20, 1940.

Reg. No. 393,182. Registered Jan. 27, 1942. WHITE LABORATORIES, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

MULTI-BETA

FOR VITAMIN PREPARATIONS.
Claims use since Sept. 10, 1941.

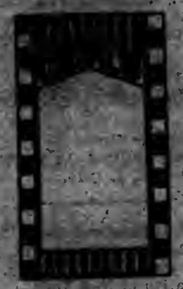
Reg. No. 398,249. Registered Oct. 20, 1942. WHITE LABORATORIES, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

OPHTHAMOL

FOR OPHTHALMIC OINTMENT FOR USE IN THE LOCAL TREATMENT OF THE EYE.
Claims use since Aug. 21, 1941.

Reg. No. 399,067. Registered Dec. 8, 1942. WHITE LABORATORIES, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

NEO MULTI-VI



FOR VITAMINS IN TABLET FORM, CAPSULE FORM, AND LIQUID FORM.
Claims use since July 20, 1942.

Reg. No. 400,157. Registered Feb. 16, 1943. BROOKS BROTHERS, New York, N. Y., a corporation of New York. Republished by registrant.

"346"

FOR COLOGNE PREPARATION USED AS A SHAVING LOTION AND RUBDOWN.
Claims use since June 15, 1942.

Reg. No. 402,447. Registered July 20, 1943. HYMAN KARNO, doing business as Altone Chemical Co., New Orleans, La. Republished by Altone Chemical Company, Inc., New Orleans, La., a corporation of Louisiana.

FOR COUGH SYRUP.
Claims use since 1902.

Reg. No. 402,632. Registered Aug. 3, 1943. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

KLEENORITE

FOR COUNTER-ETCH USED IN REMOVING OXIDES AND FOREIGN MATTER FROM THE GRAINED SURFACES OF LITHOGRAPHIC PLATES.
Claims use since Nov. 20, 1940.

Reg. No. 402,633. Registered Aug. 3, 1943. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

KOTEORITE

FOR SOLUTION USED FOR MAKING A LITHOGRAPHIC PLATE PHOTOSENSITIVE.
Claims use since Nov. 20, 1940.

Reg. No. 402,634. Registered Aug. 3, 1943. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

WASHORITE

FOR SOLUTION USED TO CLEAN BLANKETS AND ROLLERS USED IN PRINTING MACHINES.
Claims use since Nov. 20, 1940.

Reg. No. 402,635. Registered Aug. 3, 1943. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PROTECTORITE

FOR PREPARATION USED TO PRESERVE LITHOGRAPHIC PLATES WHEN THEY ARE TO BE STORED FOR LONG PERIODS OF TIME.
Claims use since Nov. 20, 1940.

FOR READY-MIXED PAINTS AND VARNISHES.
Claims use since about Sept. 25, 1898.

Reg. No. 146,505. Registered Nov. 15, 1921. PATEK BROTHERS, Milwaukee, Wis. Republished by Patek Brothers, Inc., Milwaukee, Wis., a corporation of Wisconsin.

FOR ENAMELS, PASTE PAINTS, JAPANS, WOOD FILLERS, PAINT DRIERS, WOOD STAINS, LACQUERS, CALCIMINES, CONCRETE AND CEMENT PAINTS, FLAT WASHABLE OIL PAINTS, PAINT AND VARNISH REMOVERS, FLOOR-PAINTS, COLORS IN OIL, FURNITURE-POLISH, AUTOMOBILE-BODY POLISH, FLOOR OIL, AND POLISHES GENERALLY FOR PAINTED AND VARNISHED SURFACES.
Claims use since 1906.

Reg. No. 170,779. Registered July 24, 1923. GODFREY L. CABOT, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

KALISTA

FOR CARBON BLACK.
Claims use since January 1914.

Reg. No. 174,277. Registered Oct. 16, 1923. CHARLES DRABEK, doing business as Painters Supply Co., Cleveland, Ohio. Republished by The S. C. Wagenman Paint Stores Company, Cleveland, Ohio, a corporation of Ohio.

GLOSPAR

FOR READY-MIXED PAINTS, VARNISHES, AND PAINT ENAMELS.
Claims use since January 1916.

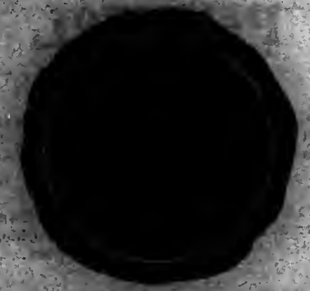
Reg. No. 174,488. Registered Oct. 16, 1923. GODFREY L. CABOT, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

MONARCH

FOR CARBON BLACK.
Claims use since October 1912.

Reg. No. 176,956. Registered Nov. 13, 1923. CHARLES DRABEK, doing business as Painters Supply Co., Cleveland, Ohio. Republished by The S. C. Wagenman Paint Stores Company, Cleveland, Ohio, a corporation of Ohio.

PASCO



FOR READY-MIXED PAINTS, VARNISHES, PAINT ENAMELS, STAINS, AND POLISHES FOR PAINTED AND LACQUERED SURFACES.
Claims use since January 1921.

Reg. No. 176,060. Registered Nov. 13, 1923. CHARLES DRABEK, doing business as Painters Supply Co., Cleveland, Ohio. Republished by The S. C. Wagenman Paint Stores Company, Cleveland, Ohio, a corporation of Ohio.

LIQUID TILE

FOR READY-MIXED PAINTS AND PAINT ENAMELS.
Claims use since about Jan. 1, 1918.

Reg. No. 195,137. Registered Feb. 17, 1925. THE S. C. WAGENMAN PAINT STORES COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

FOR DRY, PASTE, AND READY-MIXED PAINTS, VARNISHES, PAINT ENAMELS, AND PAINT OILS.
Claims use since on or about May 1, 1924.

Reg. No. 221,711. Registered Dec. 7, 1926. THE S. C. WAGENMAN PAINT STORES COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

FOR DRY, PASTE, AND READY-MIXED PAINTS, VARNISHES, PAINT ENAMELS, AND PAINT OILS.
Claims use since July 1, 1926.

Reg. No. 299,573. Registered Dec. 13, 1932. GODFREY L. CABOT, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

MOGUL

FOR CARBON BLACK.
Claims use since Mar. 10, 1932.

Reg. No. 302,707. Registered Apr. 25, 1933. GODFREY L. CABOT, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

CARBOLAC

FOR CARBON BLACK FOR USE IN THE MANUFACTURE OF VARNISHES AND LACQUERS.
Claims use since July 27, 1931.

Reg. No. 331,671. Registered Jan. 14, 1936. THE FLOOD COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

PENETROL

FOR PROTECTIVE PRIMING COAT MATERIAL FOR USE WITH PAINTS, VARNISHES AND THE LIKE.
Claims use since Sept. 13, 1934.

Reg. No. 371,933. Registered Oct. 17, 1939. THE HARRISON PAINT & VARNISH COMPANY, Canton, Ohio, a corporation of Ohio. Republished by registrant.

The words "Dutch Standard" are disclaimed.
FOR READY-MIXED OIL PAINTS, PAINT ENAMELS AND VARNISH.
Claims use since June 2, 1933.

Reg. No. 386,042. Registered Mar. 25, 1941. GEORGE G. WALTERS, doing business as The Harrison Paint & Varnish Company, Canton, Ohio. Republished by The Harrison Paint & Varnish Company, Canton, Ohio, a corporation of Ohio.

The word "Kote" is disclaimed.
FOR LIQUID ASPHALT ASBESTOS FIBRE ROOF PAINT, BONDING COAT PAINTS, FOUNDATION COATING PAINTS, VARNISHES, PAINT ENAMELS AND ROOF PAINTS.
Claims use since Jan. 1, 1937.

Reg. No. 411,721. Registered Jan. 30, 1945. CRESCENT BRONZE POWDER CO., Chicago, Ill., a co-partnership. Republished by registrant.

CRES-LITE

FOR METALLIC PAINT PIGMENTS, BRONZE POWDER FOR USE IN PAINT, ALUMINUM POWDER FOR USE IN PAINT, VEHICLES FOR METALLIC PIGMENT PAINTS AND MIXED METALLIC PAINTS.
Claims use since 1926.

Reg. No. 411,885. Registered Feb. 6, 1945. OROLINE PRODUCTS CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

OROLINE

FOR METALLIC PIGMENTS, VEHICLES FOR METALLIC PIGMENTS, AND MIXED METALLIC PIGMENT PAINTS.
Claims use since May 1936.

Reg. No. 414,315. Registered June 5, 1945. CARBOLA CHEMICAL CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

CARBOLA

FOR DISINFECTING PAINT.
Claims use since about Dec. 15, 1914.

Reg. No. 414,316. Registered June 5, 1945. CARBOLA CHEMICAL CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

HYLITE

FOR DISINFECTING PAINT.
Claims use since about June 15, 1912.

Reg. No. 419,906. Registered Mar. 12, 1946. CRESCENT BRONZE POWDER CO., Chicago, Ill., a co-partnership. Republished by registrant.

SYNCHROME

FOR MIXED ALUMINUM PAINT.
Claims use since May 1938.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 378,603. Registered June 11, 1940. BROOKS BROTHERS, New York, N. Y., a corporation of New York. Republished by registrant.

"346"

FOR PIPE TOBACCO.
Claims use since Nov. 4, 1939.

Reg. No. 407,895. Registered July 4, 1944. BROOKS BROTHERS, New York, N. Y., a corporation of New York. Republished by registrant.

FOR SMOKING TOBACCO.
Claims use since Nov. 4, 1939.

Reg. No. 431,448. Registered July 22, 1947. BROOKS BROTHERS, New York, N. Y., a corporation of New York. Republished by registrant.

GOLDEN FLEECE

FOR SMOKING TOBACCO.
Claims use since July 1, 1946.

CLASS 19

VEHICLES

Reg. No. 261,180. Registered Sept. 10, 1929. THE CLEVELAND WELDING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Clev Weld

The word "Weld" is disclaimed.
FOR VEHICLE WHEELS AND PARTS THEREOF, FELLY BANDS, VEHICLE WHEEL RIMS, WHETHER FIXED, DEMOUNTABLE, OR DETACHABLE, FOR SUPPORTING PNEUMATIC, SOLID RUBBER, AND CUSHION TIRES.
Claims use since Jan. 27, 1925.

Reg. No. 332,192. Registered Feb. 4, 1936. THE CLEVELAND WELDING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

ROAD MASTER

FOR BICYCLES.
Claims use since on or about Aug. 18, 1935.

Reg. No. 341,490. Registered Dec. 8, 1936. THE CLEVELAND WELDING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Radio

FOR BICYCLES.
Claims use since on or about July 18, 1936.

Reg. No. 341,762. Registered Dec. 22, 1936. THE CLEVELAND WELDING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Radio-Cycle

The word "Cycle" is disclaimed.
FOR BICYCLES.
Claims use since on or about July 18, 1936.

Reg. No. 345,937. Registered May 11, 1937. THE CLEVELAND WELDING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

FLEETWING

FOR BICYCLES.
Claims use since on or about Dec. 7, 1936.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 97,127. Registered May 19, 1914. THE CUTLER-HAMMER MFG. CO., Milwaukee, Wis. Republished by Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware.

THERMOPLAX

FOR INSULATING MATERIAL.
Claims use since Dec. 11, 1913.

Reg. No. 156,669. Registered July 11, 1922. THE FEDERAL GAUGE COMPANY, Chicago, Ill. Republished by The Mercoid Corporation, Chicago, Ill., a corporation of Delaware.

MERCOID

FOR PRESSURE, VACUUM, THERMOSTATIC, AND TEMPERATURE CIRCUIT-CONTROLLING DEVICES AND SWITCHES AND PRESSURE-CONTROLLING SWITCHES AND MERCURY TUBES.
Claims use since Sept. 20, 1921.

Reg. No. 208,852. Registered Feb. 9, 1926. THE FEDERAL GAUGE CO., Chicago, Ill. Republished by The Mercoid Corporation, Chicago, Ill., a corporation of Delaware.

The drawing is lined for the colors black and green.
FOR LEAD WIRES FOR ELECTRICAL CONNECTIONS TO MERCURY-TUBE SWITCHES.
Claims use since January 1922.

Reg. No. 210,391. Registered Mar. 16, 1926. ELEVATOR SUPPLIES CO., INC., Hoboken, N. J., a corporation of New Jersey. Republished by registrant, present address Perth Amboy, N. J.

LOCDROP

FOR ANNUNCIATORS.
Claims use since about Jan. 1, 1912.

Reg. No. 223,519. Registered Oct. 4, 1927. [illegible] ELECTRICAL MANUFACTURING COMPANY, Adrian, Mich. Republished by Bassted Manufacturing Company, Fostoria, Ohio, a corporation of Ohio.

ESKIMO

FOR ELECTRICALLY DRIVEN LIQUID MIXERS AND ELECTRICAL FANS.
Claims use since April 1926.

Reg. No. 239,189. Registered Feb. 21, 1928. CHICAGO FUSE MFG. CO., Chicago, Ill. Republished by Jefferson Electric Company, Bellwood, Ill., a corporation of Illinois.

GEM

FOR NONRENEWABLE ENCLOSED FUSES, PLUG FUSES, MICA-TOP PLUG FUSES, INSTRUMENT PROTECTIVE FUSES.
Claims use since Dec. 1, 1913.

Reg. No. 265,064. Registered Dec. 10, 1929. THE PEP BOYS—MANNY, MOE & JACK, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR STORAGE BATTERIES.
Claims use since Jan. 1, 1929.

Reg. No. 276,366. Registered May 6, 1930. THE SUPERIOR SWITCHBOARD & DEVICES COMPANY, Canton, Ohio, a corporation of Ohio. Republished by registrant.

Reactiformer

FOR COMBINED METER TEST SWITCHES AND PHASING TRANSFORMERS FOR REACTIVE COMPONENT METERING.
Claims use since July 1, 1927.

Reg. No. 278,685. Registered Dec. 23, 1930. CUTLER-HAMMER, INC., Milwaukee, Wis., a corporation of Delaware. Republished by registrant.

Ltl CONTROL

The word "Control" is disclaimed.
FOR UNITARY CONTROL SYSTEM FOR DIRECT-CURRENT MOTORS.
Claims use since Apr. 16, 1926.

Reg. No. 282,404. Registered Apr. 21, 1931. CUTLER-HAMMER, INC., Milwaukee, Wis., a corporation of Delaware. Republished by registrant.

DUR-rister

FOR ELECTRIC RESISTANCE UNITS PARTICULARLY ADAPTED FOR THE CONTROL OF ELECTRIC MOTORS.
Claims use since prior to Oct. 23, 1930.

Reg. No. 309,664. Registered Jan. 23, 1934. SANDEL MANUFACTURING CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

OLD COLONY

FOR ELECTRIC PORTABLE LAMPS.
Claims use since on or about Jan. 1, 1933.

Reg. No. 313,393. Registered May 29, 1934. JAMES R. KEARNEY CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

TRIP O MATIC

The words "Trips Out" are disclaimed.
FOR ELECTRIC SWITCHES FOR USE IN HIGH TENSION ELECTRIC POWER AND LIGHT LINES.
Claims use since Apr. 12, 1933.

Reg. No. 325,443. Registered June 25, 1935. THE GOODYEAR TIRE & RUBBER COMPANY, INC., Wilmington, Del., and Akron, Ohio, a corporation of Delaware. Republished by registrant.

RESOLUTE

FOR STORAGE BATTERIES.
Claims use since Dec. 8, 1934.

Reg. No. 333,427. Registered Mar. 24, 1936. JAMES R. KEARNEY CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

COP-NO-AL CON-NEC-TITE

The word "Con-Nec-Tite" is disclaimed.
FOR ELECTRICAL CONNECTORS.
Claims use since Oct. 14, 1935.

Reg. No. 337,040. Registered July 28, 1936. THE TORRINGTON MANUFACTURING COMPANY, Torrington, Conn., a corporation of Connecticut. Republished by registrant.

AIRISTOCRAT

FOR ELECTRIC FANS, PARTICULARLY IMPELLER TYPE FANS FOR FREE-AIR AS WELL AS PRESSURE USES.
Claims use since Mar. 16, 1936.

Reg. No. 341,849. Registered Dec. 8, 1936. JAMES R. KEARNEY CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

TRIP-O-LINK

The word "Link" is disclaimed.
FOR FUSE SWITCHES.
Claims use since Aug. 8, 1935.

Reg. No. 354,094. Registered Feb. 1, 1938. THE MERCOID CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DAYNITE TIMERCOID

FOR ELECTRIC CONTROLS FOR ELECTRIC SWITCHES, TIME CONTROLLED ELECTRIC SWITCHES, AND PARTS THEREOF.
Claims use since on or about July 29, 1937.

Reg. No. 356,606. Registered May 3, 1938. THE MERCOID CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

IMMERSATHERM

FOR ELECTRIC CONTROLS FOR ELECTRIC SWITCHES, TEMPERATURE OPERATED ELECTRIC SWITCHES, PRESSURE OPERATED ELECTRIC SWITCHES, AND PARTS THEREOF.
Claims use since on or about Oct. 7, 1937.

Reg. No. 358,745. Registered July 26, 1938. JAMES R. KEARNEY CORPORATION, St. Louis, Mo., a corporation of the State of Missouri. Republished by registrant.

TRIP-O-GAP

The words "Trip" and "Gap" are disclaimed.
FOR ELECTRICAL SURGE ARRESTERS AND PARTS THEREOF.
Claims use since Aug. 11, 1937.

Reg. No. 358,778. Registered July 26, 1938. JAMES R. KEARNEY CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

JAMES R. KEARNEY CORPORATION ST. LOUIS, MO.

The designation "St. Louis, Mo." is disclaimed.
FOR ELECTRICAL CONNECTORS, LIGHTNING AND SURGE ARRESTERS, ELECTRICAL CLAMPS, GROUNDERS, ELECTRICAL SWITCHES AND PARTS THEREOF, FUSE LINKS, DROP WIRE GRIPS, WIRE HOLDERS, AND ELECTRICAL CUTOUTS.
Claims use since September 1926.

Reg. No. 383,648. Registered Dec. 17, 1940. CUTLER-HAMMER, INC., Milwaukee, Wis., a corporation of Delaware. Republished by registrant.

UNITROL

FOR CABINETS OF THE CUBICLE TYPE FOR ELECTRICAL CONTROL APPARATUS.
Claims use since on or about July 31, 1940.

Reg. No. 415,333. Registered Aug. 7, 1945. L. J. KAUFMAN MANUFACTURING COMPANY, Manitowoc, Wis., a corporation of Wisconsin. Republished by registrant.

HEDGE-MASTER

The word "Hedge" is disclaimed.
FOR ELECTRICAL HEDGE TRIMMERS.
Claims use since 1937.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 134,675. Registered Sept. 14, 1920. HALSAM PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HALSAM

FOR BUILDING BLOCKS, PLAY-BLOCKS, AND BLOCKS FOR GAMES.
Claims use since Feb. 25, 1918.

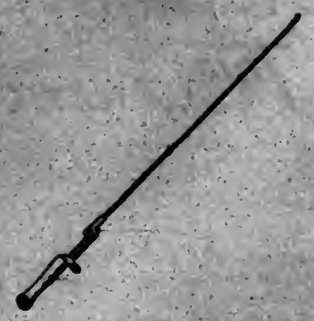
Reg. No. 227,405. Registered May 3, 1927. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

"Zig-Wag"

FOR ARTIFICIAL BAITS.
Claims use since Nov. 15, 1926.

Reg. No. 272,994. Registered July 15, 1930. THE ROCHESTER FOLDING BOX CO., Rochester, N. Y., a corporation of New York. Republished by registrant.

JACKBILT



FOR TOY PLAYHOUSES, THEATERS, WAYSIDE STORES, AND DOLL HOUSES.
Claims use since Nov. 12, 1928.

Reg. No. 280,236. Registered Feb. 10, 1931. FRED MEDART MANUFACTURING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

MEDART

FOR GYMNASIUM AND PLAYGROUND APPARATUS—NAMELY, ABDOMINAL MATS, ARM MACHINES, BACK STANDS, BALANCE BOARDS, BALL ROPES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since 1881.

Reg. No. 305,165. Registered Aug. 8, 1933. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

The drawing is lined for the color red. No claim is made to the representation of a fishing rod.
FOR FISHING RODS.
Claims use since Feb. 15, 1933.

Reg. No. 340,269. Registered Nov. 3, 1936. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

SHORE-MINNOW

The word "Minnow" is disclaimed.
FOR ARTIFICIAL BAITS.
Claims use since May 1935.

Reg. No. 347,844. Registered July 6, 1937. HALSAM PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Hi-Lo

FOR TOY BLOCKS.
Claims use since on or about Feb. 1, 1937.

Reg. No. 356,877. Registered May 2, 1939. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

SPEED-SWING

FOR STEEL SHAFTS FOR GOLF CLUBS.
Claims use since Dec. 8, 1938.

Reg. No. 373,519. Registered Dec. 12, 1939. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

Crazy-Crawler

The word "Crawler" is disclaimed.
FOR FISH LURES.
Claims use since Mar. 6, 1939.

Reg. No. 376,003. Registered Mar. 12, 1940. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

PUNKIN-SEED

FOR FISH LURES.
Claims use since Dec. 1, 1938.

Reg. No. 389,057. Registered July 22, 1941. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

MIDGIT-DIGIT

FOR FISH LURES.
Claims use since Jan. 2, 1941.

Reg. No. 389,058. Registered July 22, 1941. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

Torpedo

FOR FISH LURES.
Claims use since Aug. 1, 1925.

Reg. No. 391,875. Registered Nov. 25, 1941. ELGO PLASTICS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

PYLOK

FOR TOY BUILDING BLOCKS.
Claims use since on or about Apr. 15, 1941.

Reg. No. 404,791. Registered Dec. 21, 1943. BROOKS BROTHERS, New York, N. Y., a corporation of New York. Republished by registrant.

ESTABLISHED 1818

BROOKS BROTHERS

FOR GOLF BAGS, GOLF STICKS, PLAYING CARDS, GAME BOARDS AND MOVABLE PIECES FOR PLAYING GAMES UPON THE SAME, GAME BOARDS AND MOVABLE PIECES FOR PLAYING ON GAME BOARDS, BACKGAMMON SETS, POKER CHIPS, GOLF BALLS, CARD GAMES, DICE, ICE SKATES, SQUASH AND TENNIS CASES.
Claims use since 1894.

Reg. No. 418,307. Registered Dec. 11, 1945. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

"Rip-Tide"

FOR FISHING RODS.
Claims use since Jan. 10, 1940.

Reg. No. 428,563. Registered Mar. 25, 1947. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

Pal

FOR FISHING RODS.
Claims use since Feb. 14, 1933.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 128,905. Registered Jan. 13, 1920. WRIGHT MFG. CO., Lisbon, Ohio. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

The representation of a hoisting-block is disclaimed.
FOR HOISTS AND TROLLEYS.
Claims use since Feb. 10, 1919.

Reg. No. 150,723. Registered Jan. 10, 1922. THE C. O. BARTLETT & SNOW COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TRIUMPH

FOR CRUSHERS FOR CRUSHING COAL, CORN, AND COBS AND LIKE MATERIAL; PAINT MILLS, PAINT MIXERS, DRIERS FOR DRYING GRAIN, TANKAGE, AND LIKE MATERIALS, AND CORN SHELLERS.
Claims use since 1898.

Reg. No. 180,292. Registered Feb. 26, 1924. CRESCENT BELT FASTENER COMPANY, New York, N. Y. Republished by Crescent Belt Fastener Company, Inc., New York, N. Y., a corporation of New York.

CRESCENT

FOR EXTRACTORS—NAMELY, RIVET CUTTERS, PULLERS, PINCERS, PLIERS, AND TONGS FOR MACHINERY BELTING—AND ALSO BELT CLAMPS FOR HOLDING THE BELT IN POSITION WHILE BEING LACED OR FASTENED.
Claims use since September 1897.

Reg. No. 284,656. Registered July 7, 1931. THE ARO EQUIPMENT CORPORATION, Bryan, Ohio, a corporation of Ohio. Republished by registrant.

ARO

FOR PORTABLE PRESSURE LUBRICATING EQUIPMENT—NAMELY, PRESSURE GUNS, AIR COMPRESSORS WITH TUBING, AND PARTS FOR THE FOREGOING; STATIONARY PRESSURE LUBRICATING SYSTEMS COMPRISING COMPRESSORS, PRESSURE GUNS, PIPING, TUBING, NOZZLES, VALVES, ALL SOLD AS A UNIT.
Claims use since May 15, 1930.

Reg. No. 287,795. Registered June 14, 1932. PENNSYLVANIA LAWN MOWER WORKS, Prince, Pa. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

METEOR

FOR LAWN MOWERS AND PARTS THEREOF.
Claims use since Dec. 22, 1931.

Reg. No. 309,580. Registered Aug. 1, 1939. JAMES R. KEARNEY CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Hi-LINE

The word "Line" is disclaimed.
FOR INSPECTION MIRRORS, CLAMPS, POLE GRIPS, POLE GRIP EXTENSIONS, TIE STICKS AND HEADS, CLAMP-STICKS AND HEADS, CUMALONGS, INSULATED WIRE CUTTERS, DEAD END TOOLS, DISCONNECT STICKS AND HEADS, FLUX RING TONGS, FUSE PULLER AND EYE CLAMPSTICK COMBINATION, HANDPOLES AND PARTS THEREOF, LIFTING POLES AND PARTS THEREOF, SOCKET WRENCH TOOLS, HINGED LIFTING TOOLS, ROPE HITCHES, STRAIN INSULATOR HOOKS, LINE HOSE TOOLS AND HEADS, TREE PRUNERS AND HEADS, UTILITY TOOL SETS, SKINNING KNIVES, TIE WIRE ASSISTANTS, AND WRENCH SOCKETS.
Claims use since Apr. 14, 1936.

Reg. No. 374,249. Registered Jan. 2, 1940. THE ARO EQUIPMENT CORPORATION, Bryan, Ohio, a corporation of Ohio. Republished by registrant.

ARO

FOR PNEUMATIC TOOLS INCLUDING AIR OPERATED MOTORS, DRILLS, PILOT DRILLS, DRILL CHUCKS, BRUSHES, POLISHERS, BUFFERS, GRINDERS, SAWS, HOLE SAWS, SPINDLE ADAPTERS, SPEED CHANGING ATTACHMENTS AND RIGHT ANGLE ATTACHMENTS FOR AIR OPERATED MOTORS.
Claims use since June 5, 1939.

Reg. No. 374,540. Registered Jan. 16, 1940. JAMES R. KEARNEY CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

LAY-CIT

FOR GRIPS FOR ELECTRIC CABLE.
Claims use since Aug. 10, 1938.

Reg. No. 378,647. Registered June 11, 1940. YARD-MAN, INC., Jackson, Mich., a corporation of Michigan. Republished by registrant.

YARD-MAN

FOR HAND AND MOTOR-PROPELLED LAWN MOWERS.
Claims use since May 9, 1933.

Reg. No. 286,943. Registered Mar. 15, 1941. THE MONARCH MARKING SYSTEM CO., Dayton, Ohio, a corporation of Ohio. Republished by registrant.

5o

FOR MACHINES FOR APPLYING PRICE MARKING INDICIA TO MERCHANDISE.
Claims use since May 1940.

Reg. No. 286,944. Registered Mar. 18, 1941. THE MONARCH MARKING SYSTEM CO., Dayton, Ohio, a corporation of Ohio. Republished by registrant.

JUNIOR MONARCH

FOR MACHINES FOR APPLYING PRICE MARKING INDICIA TO MERCHANDISE.
Claims use since July 1921.

Reg. No. 286,550. Registered Apr. 15, 1941. FERRACUTE MACHINE COMPANY, Bridgeton, N. J., a corporation of New Jersey. Republished by registrant.

FERRACUTE

FOR POWER PRESSES AND PARTS THEREOF, WHICH MAY BE MORE PARTICULARLY DESIGNATED AS CUTTING PRESSES, FORMING AND SHAPING PRESSES, DRAWING PRESSES, EMBOSSING PRESSES, STAMPING PRESSES, AND MACHINES KNOWN AS "PRESS BRAKES," AND FOR CLUTCHES, AND COMBINED BRAKE AND CLUTCH MECHANISMS AND PARTS THEREOF, USEFUL ON SAID ABOVE MENTIONED PRESSES.
Claims use since Jan. 1, 1877.

Reg. No. 288,837. Registered July 15, 1941. LUBRI-FINER, INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

Dieselpak

FOR REPLACEMENT UNITS FOR OIL-REFINING DEVICES FOR DIESEL ENGINES.
Claims use since Mar. 27, 1940.

Reg. No. 309,496. Registered Jan. 12, 1943. HY-PRO TOOL CO., INC., New Bedford, Mass., a corporation of Massachusetts. Republished by registrant.

HY-PRO

FOR TAPS, THREAD-CUTTING DIES, SCREW AND BOLT-HEADING DIES, CUTTERS, REAMERS, HOBS, COUNTERBORES, KNURLING TOOLS, AND PUNCHES.
Claims use since Apr. 29, 1941.

Reg. No. 401,616. Registered May 25, 1943. AMERICAN ART ALLOYS, INC., Kokomo, Ind. Republished by Dirilyte Company of America, Inc., Kokomo, Ind., a corporation of Indiana.

Dirilyte

FOR KNIVES, FORKS, AND OTHER TABLE FLATWARE, MADE OF NONPRECIOUS METAL.
Claims use since June 24, 1938.

Reg. No. 401,617. Registered May 25, 1943. AMERICAN ART ALLOYS, INC., Kokomo, Ind. Republished by Dirilyte Company of America, Inc., Kokomo, Ind., a corporation of Indiana.

DIRILYTE

FOR KNIVES, FORKS, AND OTHER TABLE FLATWARE, MADE OF NONPRECIOUS METAL.
Claims use since June 24, 1938.

Reg. No. 401,618. Registered May 25, 1943. AMERICAN ART ALLOYS, INC., Kokomo, Ind. Republished by Dirilyte Company of America, Inc., Kokomo, Ind., a corporation of Indiana.

Dirilyte

FOR KNIVES, FORKS, AND OTHER TABLE FLATWARE, MADE OF NONPRECIOUS METAL.
Claims use since June 24, 1938.

Reg. No. 406,283. Registered Mar. 21, 1944. AJAX FLEXIBLE COUPLING CO. INC., Westfield, N. Y., a corporation of New York. Republished by registrant.

LO-VEYOR

FOR VIBRATORY CONVEYORS.
Claims use since Nov. 30, 1942.

Reg. No. 410,219. Registered Nov. 14, 1944. OHLEN-BISHOP MANUFACTURING COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

ROCKET

FOR SAWS.
Claims use since Dec. 25, 1934.

Reg. No. 411,236. Registered Jan. 9, 1945. OHLEN-BISHOP MANUFACTURING COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

MERCURY

FOR SAWS.
Claims use since Nov. 1, 1939.

Reg. No. 424,458. Registered No. Oct. 8, 1946. McQUAY-NORRIS MANUFACTURING COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

Resi-Bond

FOR ENGINE BEARINGS.
Claims use since January 1944.

Reg. No. 426,837. Registered Jan. 14, 1947. CHRIS-CRAFT CORPORATION, Algonac, Mich., a corporation of Michigan. Republished by registrant.

Chris-Craft

FOR MARINE MOTORS AND OUTBOARD MOTORS.
Claims use since on or about June 1, 1922.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 219,749. Registered Oct. 26, 1926. THE AMERICAN LAUNDRY MACHINERY COMPANY, Norwood Station, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present location Norwood, Cincinnati, Ohio.

MAMMOTH CASCADE

FOR LAUNDRY WASHING MACHINES.
Claims use since Sept. 19, 1925.

Reg. No. 253,131. Registered Feb. 19, 1929. THE AMERICAN LAUNDRY MACHINERY COMPANY, Norwood, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

HY-LO

FOR LAUNDRY WASHING MACHINES.
Claims use since Sept. 5, 1928.

Reg. No. 270,575. Registered May 6, 1930. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present location, Norwood, Cincinnati, Ohio.

MONEX

FOR EXTRACTORS FOR REMOVING MOISTURE OR CLEANING FLUIDS FROM FABRICS, CLOTHING.
Claims use since Oct. 23, 1929.

Reg. No. 274,725. Registered Sept. 2, 1930. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present location, Norwood, Cincinnati, Ohio.

The words "Speed Tumbler" are disclaimed.
FOR DRYING MACHINES FOR REMOVING MOISTURE OR CLEANING FLUIDS FROM FABRICS, CLOTHING AND THE LIKE.
Claims use since Aug. 7, 1929.

Reg. No. 275,594. Registered Sept. 23, 1930. THE AMERICAN LAUNDRY MACHINERY COMPANY, Norwood Station, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present location Norwood, Cincinnati, Ohio.

ZORIC

FOR DRY-CLEANING PLANTS OR SYSTEMS.
Claims use since November 1929.

Reg. No. 332,582. Registered Feb. 18, 1936. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

ZARMO

FOR PRESSING MACHINES.
Claims use since Aug. 7, 1935.

Reg. No. 356,490. Registered Apr. 26, 1938. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

ZARMOETTE

FOR PRESSING MACHINES.
Claims use since May 14, 1937.

Reg. No. 370,748. Registered Sept. 5, 1939. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present location Norwood, Cincinnati, Ohio.

AIRCRAFT

FOR DRYING MACHINES AND MORE PARTICULARLY, MACHINES USED IN LAUNDRIES FOR THE DRYING OF LAUNDRY ARTICLES AND USED IN DRY-CLEANING PLANTS FOR THE DRYING OF DRY-CLEANING WORK.
Claims use since June 16, 1937.

Reg. No. 370,781. Registered Sept. 5, 1939. THE AMERICAN LAUNDRY MACHINERY COMPANY, Norwood Station, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present location Norwood, Cincinnati, Ohio.

AIRWAY

FOR DRYING MACHINES FOR LAUNDRY ARTICLES AND THE LIKE.
Claims use since Feb. 1, 1934.

Reg. No. 390,176. Registered Sept. 9, 1941. THE AMERICAN LAUNDRY MACHINERY COMPANY, Norwood Station, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present location Norwood, Cincinnati, Ohio.

ZONE-AIR

The word "Air" is disclaimed.
FOR DRYING MACHINES, AND MORE PARTICULARLY, FOR MACHINES USED IN LAUNDRIES FOR THE DRYING OF LAUNDRY ARTICLES AND USED IN DRY CLEANING PLANTS FOR THE DRYING OF DRY CLEANING WORK.
Claims use since on or about Dec. 18, 1940.

FOR RAW POP CORN.
Claims use since July 15, 1933.

Reg. No. 399,264. Registered Dec. 22, 1942. COMMANDO FOODS, INC., Webster, N. Y., a corporation of New York. Republished by registrant, present location Williamson, N. Y.

BAYONET

FOR CANNED APPLE SAUCE.
Claims use since June 22, 1942.

Reg. No. 399,691. Registered Jan. 26, 1943. NEW ENGLAND GRAIN PRODUCTS CO., Waterville, Maine, a corporation of Maine. Republished by registrant, present location Portland, Maine.

The word "Mix" is disclaimed.
FOR STOCK FEED—NAMELY, A PREPARED FOOD SUITABLE ESPECIALLY FOR CALVES.
Claims use since Apr. 1, 1942.

Reg. No. 408,650. Registered Aug. 22, 1944. WEBSTER-THOMAS COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

FEARLESS

FOR CANNED VEGETABLES, CANNED FRUITS AND CANNED FISH.
Claims use since 1900.

Reg. No. 409,978. Registered Oct. 31, 1944. WHITE LABORATORIES, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

Livex

FOR POULTRY AND LIVESTOCK FEED SUPPLEMENT.
Claims use since Apr. 20, 1944.

Reg. No. 414,707. Registered June 26, 1945. J. S. IVINS' SON, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

IVINETTES

FOR CRACKER SANDWICHES—NAMELY, CHEESE SQUARES AND PEANUT BUTTER SQUARES.
Claims use since July 1906.

Reg. No. 425,840. Registered Dec. 3, 1946. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DELYN

FOR DRIED WHEY FOR USE IN POULTRY AND ANIMAL FEEDS.
Claims use since Mar. 3, 1930.

Reg. No. 425,841. Registered Dec. 3, 1946. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

KRAYSTAY

FOR STABILIZING MATERIAL FOR USE IN SOUPS AND OTHER FOOD PRODUCTS.
Claims use since Mar. 7, 1939.

Reg. No. 426,155. Registered Dec. 17, 1946. AMERICAN POP CORN COMPANY, Sioux City and Leeds Station, Sioux City, Iowa., a corporation of Iowa. Republished by registrant, present location Sioux City, Iowa.

GOLD MINE

FOR RAW POP CORN.
Claims use since Mar. 15, 1946.

Reg. No. 426,668. Registered Jan. 7, 1947. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

FLAV-O'MARD

FOR ROLLER DRIED BUTTERMILK MADE FROM SWEET CREAM.
Claims use since Mar. 20, 1939.

Reg. No. 426,699. Registered Jan. 7, 1947. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

KRAFEN

FOR DRIED CHEESE WHEY.
Claims use since Mar. 20, 1939.

Reg. No. 426,700. Registered Jan. 7, 1947. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

KRAFTEEN

FOR MILK FAT OBTAINED BY MECHANICAL SEPARATION FROM CREAM.
Claims use since November 1940.

Reg. No. 426,701. Registered Jan. 7, 1947. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

KRALEX

FOR NONFAT DRY MILK SOLIDS DRIED BY THE SPRAY PROCESS.
Claims use since Dec. 4, 1944.

Reg. No. 426,702. Registered Jan. 7, 1947. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

MELO'MARD

FOR NONFAT DRY MILK SOLIDS SPECIALLY PREPARED FOR USE IN SAUSAGE AND MEAT LOAF MANUFACTURE.
Claims use since Apr. 4, 1939.

Reg. No. 426,703. Registered Jan. 7, 1947. KRAFT FOODS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

"12-HI"

The numeral "12" is disclaimed.
FOR BLEND OF BUTTERMILK FROM SWEET CREAM AND FRESH WHEY STANDARDIZED TO CONTAIN 12% MILK FAT ON A DRY BASIS AND DRIED BY THE ROLLER PROCESS.
Claims use since July 30, 1943.

Reg. No. 430,570. Registered June 17, 1947. THE E. H. KOESTER BAKERY COMPANY, Baltimore, Md., a corporation of Maryland. Republished by registrant.

FOR BAKERY PRODUCTS—NAMELY, BREAD.
Claims use since July 27, 1945.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 50,060. Registered Mar. 6, 1906. VALENTIN BLATZ BREWING CO., Milwaukee, Wis. Republished by Blatz Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

FOR MALT EXTRACT.
Claims use since about February 1897.

Reg. No. 382,930. Registered Nov. 19, 1940. G. KRUEGER BREWING COMPANY, Newark, N. J., a corporation of Delaware. Republished by registrant.

AMBASSADOR

FOR BEER.
Claims use since Jan. 23, 1939.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 228,652. Registered June 7, 1927. ARMSTRONG CORK COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant, present location Lancaster, Pa.

KORXOLE

FOR FABRIC-FACED SHEETS OF CORK COMPOSITION, FROM WHICH MAY BE CUT VARIOUS ARTICLES SUCH AS INNER SOLES FOR SHOES, STIFFENERS FOR CAP VISORS AND CLOTHING, BODY TRIMS FOR AUTOMOBILES, GASKETS, ETC.
Claims use since Nov. 15, 1916.

Reg. No. 335,441. Registered June 2, 1936. HERTZBERG BINDERY, Des Moines, Iowa. Republished by Library Binding Service, Inc., Des Moines, Iowa, a corporation of Iowa.

"Treasure Trove"

FOR BINDINGS AND COVERINGS FOR BOOKS AND PARTS AND FINDINGS THEREFOR.
Claims use since Jan. 17, 1936.

Reg. No. 402,965. Registered Aug. 24, 1943. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PHOTORITE

FOR ZINC PLATE USED IN LITHOGRAPHY.
Claims use since Nov. 20, 1940.

Reg. No. 403,818. Registered Oct. 19, 1943. THE INERTO COMPANY, San Francisco, Calif., a firm. Republished by registrant.

INERTO

FOR PROCESSED MINERAL USED AS A STABILIZER, CLARIFIER, OR CHILL PROOFER FOR BEER, AND LIKE PRODUCTS.
Claims use since Mar. 24, 1943.

Reg. No. 415,492. Registered Aug. 7, 1945. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ORITE

FOR BLANKETS FOR LITHOGRAPHIC PRINTING PRESSES.
Claims use since Mar. 23, 1943.

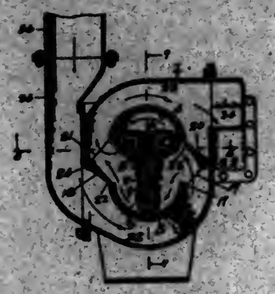
Reg. No. 416,115. Registered Aug. 28, 1945. HERBERT RUBIN, doing business as Novell, New York, N. Y. Republished by Rubicon, Inc., New York, N. Y., a corporation of New York.

DREAM LITE

The trade-mark "Lite" is disclaimed.
FOR LAMPS CONTAINING LIQUID WHICH WHEN BURNED CREATES A DEODORIZING EFFECT.
Claims use since Aug. 9, 1941.

REISSUES

JULY 6, 1948



23,014
PISTON RING
Harry M. Brumberry, New Castle, Ind.
Original No. 2,404,616, dated July 23, 1946, Serial No. 494,615, July 14, 1943. Application for reissue April 9, 1948, Serial No. 20,129
7 Claims. (Cl. 309—44)

1. A split piston ring having a core formed of an alloy steel having substantially the composition .20–.27% C; .40–.70% Mn; .30% max. Si; 1.10–1.40% Al; 1.00–1.30% Cr; .20–.30% Mo; 3.25–3.75% Ni, and the balance Fe, surrounded by a prime hard nitrided case which is blended to the core through an intervening transition zone.

23,015
REVERSIBLE ROTARY BLOWER
Frank B. Yingling, Hamilton, Ohio
Original No. 2,355,494, dated August 8, 1944, Serial No. 411,502, September 19, 1941. Application for reissue February 16, 1945, Serial No. 577,253
5 Claims. (Cl. 230—137)

1. In a reversible rotary blower, the combination with an exterior housing and a spaced interior casing forming a constant intake chamber and a constant delivery chamber, said casing comprising two spaced hemispherical concaves having each an intake port and an outlet port at each side of the blower, said ports being located between the interior of the casing and said chambers, and a pair of reversible rotary

interengaging impellers within the casing and operating means therefor, of a valve at one side of the casing controlling an intake port and an outlet port, another valve at the other side of the casing controlling an outlet port and an intake port, and means for reversing the positions of said valves to reverse the passage of air currents through the casing.

PLANT PATENTS

GRANTED JULY 6, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

799
ROSE PLANT
Eugene S. Boerner, Newark, N. Y., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application December 5, 1946, Serial No. 714,268
1 Claim. (Cl. 47—61)

A new and distinct variety of Rose plant, characterized as to novelty by the uniformity of the flowers throughout any given number of plants, both as to type and color, the lightness of this color imparted to the flowers by their characteristic suffusion of yellow, and the clarity and constancy of the pink coloring gradation, with this suffusion, running throughout the development from bud stage to full-open stage, with absence of blue shade in any of the stages, substantially as shown and described.

800
ROSE PLANT
Eugene S. Boerner, Newark, N. Y., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application January 27, 1947, Serial No. 724,623
1 Claim. (Cl. 47—61)

A new and distinct variety of hybrid tea rose plant characterized as to novelty by its vigorous growing habit; resistance to black spot; delicate coloring of its flowers; rich fragrance; high-centered form of large flower and long lasting quality as a cut flower, substantially as shown and described.

801
APPLE TREE
Marino La Pietra, West Los Angeles, Calif.
Application June 14, 1946, Serial No. 676,712
1 Claim. (Cl. 47—62)

A new and distinct variety of apple tree, characterized as to novelty by its ability to grow and bear well in the coastal regions of Southern California, by the seedlessness of its fruit, by its very good crisp, juicy eating quality, by the large size of its fruit, and by its dull-red overall color, substantially as shown and described.

802
CHRYSANTHEMUM PLANT
Emil Frunkel, Niles, Mich., assignor to The R. M. Kellogg Company, Three Rivers, Mich., a corporation of Michigan
Application November 29, 1946, Serial No. 712,882
1 Claim. (Cl. 47—66)

A new and distinct variety of chrysanthemum plant substantially as herein disclosed, characterized as to novelty by its dwarf, compact growth, its early flowering, its long blooming season, the long color life of its blooms, its production of a succession of blooms by which new flowers cover the older ones, and the deeper yellow color of its blooms as compared with the "Harvest Gold" variety.

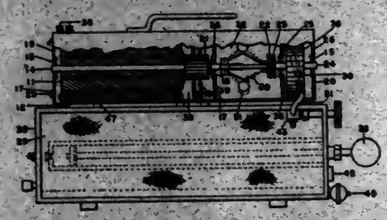
PATENTS

GRANTED JULY 6, 1948

2,444,412
MANNOGALACTAN MUCILAGES AND PROCESS FOR PRODUCING SAME
John W. Swanson, Appleton, Wis., assignor to The Institute of Paper Chemistry, Appleton, Wis., a corporation of Wisconsin
No Drawing. Application March 19, 1945, Serial No. 583,261
10 Claims. (Cl. 260—209)

8. A method of conditioning mannogalactan mucilages which comprises: forming a filterable suspension of such mucilage substantially without dissolving said mucilage; exposing the suspended mucilage to the action of sodium hypochlorite; and filtering and washing the mucilage.

2,444,413
PROCESS OF CONDITIONING REFRACTORY FOR MAKING MOLDS AND CORES
Benheur M. Weston, Detroit, Mich.
No Drawing. Application February 2, 1946, Serial No. 645,223
7 Claims. (Cl. 22—217)

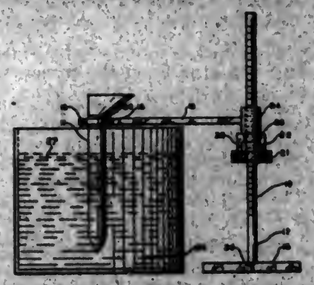


1. The process of conditioning siliceous particles selected from the group consisting of silicon dioxide and silicon carbide for use in making molds and cores for casting molten metal which comprises: mixing the siliceous particles with a surface wetting hydrocarbon liquid solution of plasticisable resin until said particles are thoroughly wetted by said solution, evaporating the solvent from said mixture to fix coatings of the resin on said siliceous particles while continuing the mixing agitation and preventing cohesion of particles until each particle acquires a relatively solid adherent film of said resin that is substantially noncohering under normal temperatures and pressures, and then mixing said noncohering resin coated particles with a resin plasticiser until the outer surfaces only of said resin films are changed from a relatively noncohering state to a cohering state and without disturbing the bond between the resin coating and said particles.

2,444,414
FLUID COUPLING
Eric Martin Anderson, Westbrook, and Beecher Olen Kelso and Clarence Milton Gimn, Portland, Maine, assignors to Utilities Distributors, Inc., a corporation of Maine
Application September 27, 1946, Serial No. 699,796
13 Claims. (Cl. 284—18)

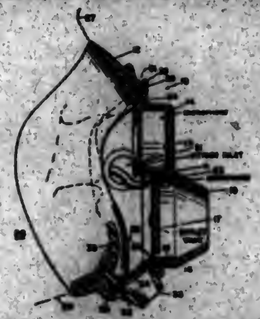
1. A detachable fluid valve-coupling unit having, in combination, a housing, an expandable gripper carried by the housing for gripping engagement with the internal periphery of the nipple to be coupled, a device for expanding said gripper, a fluid shut-off valve in the housing, a manually operable control element movable between an off and an on position, and means rendered operative by movement of said element for expanding the gripper to grip the nipple and to open the valve.

2,444,415
EMERGENCY ELECTRICAL GENERATING UNIT
Coleman A. Beeson, Baltimore, Md.
Application February 21, 1946, Serial No. 649,449
6 Claims. (Cl. 290—52)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A turbo-generator unit comprising a housing, a generator arranged in said housing, a turbine operable within the housing, a centrifugal control disposed within the housing between and joining the turbine and generator operably together, said control being adapted to adjust the speed transmitted from the turbine to the generator to certain predetermined value, a container for supplying air under pressure therefrom to said turbine, said turbine being arranged to exhaust said air driving it through the generator for absorbing heat therefrom generated therein and from thence out of the housing, and means in the housing for segregating the generator, control and turbine into separate chambers but allowing the passage of the air from the turbine chamber to the others, said container being collapsible and hingedly attached to said housing so as to permit the housing to be compactly closed together.

2,444,416
CONTROL MEANS FOR MAINTAINING CONSTANT TEMPERATURE OF LIQUIDS
Eugene Elroy Bergman, Red Bank, N. J.
Application October 2, 1944, Serial No. 557,051
6 Claims. (Cl. 62—91.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A temperature control unit comprising; a container adapted to hold a refrigerant, and means for raising and lowering the container to a desired level and also for holding it at that level to permit the adjustment of the container

with the refrigerant therein to various degrees of immersion in said bath and contents so as to

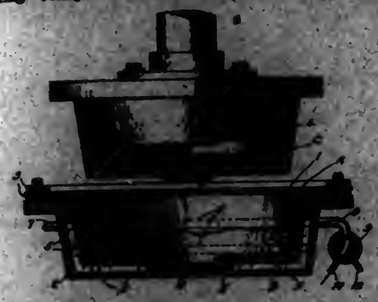
create a predetermined balance of heat absorption between the container and bath.

2,444,417
OXYGEN MASK
Howard B. Bierman, United States Navy
Application February 27, 1945, Serial No. 580,051
3 Claims. (Cl. 128—142)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A two-piece oxygen mask comprising a separable port-carrying centerpiece and a face-fitting piece and means for joining said pieces into a single mask, said means including an extending flange on one piece and a cooperating, complementary shaped recess in the other piece, said flange having a bead-shaped edge, said recess having a complementary bead-shaped portion, an expiratory passage located adjacent the bottom of said centerpiece and an outlet valve set back entirely into said expiratory passage, said expiratory passage being sufficiently open to permit easy access to said outlet valve, said centerpiece also including an oxygen inlet port located to the side thereof at least slightly above said outlet valve, said centerpiece also including a microphone supporting compartment above said valve.

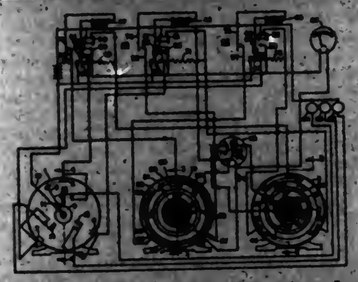
2,444,418
HIGH-FREQUENCY ELECTRONIC DEVICE
Ralph J. Bendley, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application October 15, 1942, Serial No. 462,123
13 Claims. (Cl. 250—27.5)

1. An electrode structure comprising an even number of electrode sections mutually spaced apart about a closed figure and providing cavity resonators therebetween adapted to be excited at high frequency, said electrode sections having ends in opposite faces of said electrode structure, means conductively connecting all of the even numbered electrode sections together on one face of said electrode structure and means conductively connecting all of the odd numbered electrode sections together on said one face, and a similar system of conducting connections connecting all of the alternate electrode sections together on the other face of said electrode structure.



2,444,419
MAGNETRON
Ralph J. Bendley, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application December 24, 1942, Serial No. 470,040
4 Claims. (Cl. 250—27.5)

1. An electric discharge device of the magnetron type comprising an envelope, a plurality of electrodes within said envelope including a cathode and an open-ended cylindrical anode structure surrounding said cathode, said anode structure comprising an annular ring portion and a plurality of vanes extending radially inwardly from said cylindrical portion, the inner ends of said vanes and said cathode bounding a substantially annular interelectrode space, means coupling together the cavity resonators defined by said vanes, said means comprising on each end of said anode structure a pair of annular metallic rings near the ends of said vanes facing said cathode, one of said rings in each of said pair being electrically connected to alternate vanes, the other of said rings in each said pair being electrically connected to the vanes intermediate between said alternate vanes.



2,444,420
DRAWING AND TEMPERING PLASTIC MATERIAL
Gustave W. Berkland, Marion, Ind.
Application December 22, 1944, Serial No. 569,526
5 Claims. (Cl. 18—56)

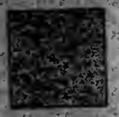
2. A method of forming products from sheet thermoplastic annealable material having a plasticising temperature between 150° F. and 225° F. at which it has a retractile tendency a melting temperature between 250° F. and 375° F. and having an annealing temperature higher than the plasticising temperature and lower than the melting temperature at which it minimizes the retractile tendency, comprising heating the sheet to a plasticising temperature lower than the annealing temperature, drawing the sheet while

heated and plastic to depress portions thereof to increase the superficial area thereof, heating the still hot and plastic material to an annealing temperature above the plasticising temperature and below the melting temperature while in its drawn tensioned condition, and then cooling the previously heated depressed portions to set them.

2,444,421
TEMPERATURE MEASURING SYSTEM WITH MAXIMUM OR MINIMUM SELECTOR
John P. Beeton, United States Navy
Application December 2, 1944, Serial No. 566,281
5 Claims. (Cl. 73—341)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. An apparatus of the character described, comprising: a source of current; a plurality of electromagnetically operated switch means; a first mechanism for successively and individually associating said source of current with the electromagnetic operating means of said switch means; means controlled by said switch means when operated for continuing said association independent of said mechanism; a plurality of means for producing electrical effects respectively corresponding with variations in magnitude of a plurality of conditions; common means for making measurements of said electrical effects; deflecting means responsive to electrical effects; a second mechanism acting synchronously with said first mechanism for severally associating said electrical effects producing means with said measurement making means through the operated switch means and for associating temporarily two of said electrical effects producing means in opposition to said deflecting means through the operated switch means; and a third mechanism acting synchronously with said second mechanism during said temporary association for providing short circuits for the operating means of said two switch means then effective on said effect producing means through said deflecting means in opposite directions, whereby one of the switch means will be released depending upon the direction of deflection of the deflecting means, and whereby only one of the effect producing means will remain in association with the measuring means, and indicating means individual to and controlled by the operative condition of the electromagnetically operated switch means.

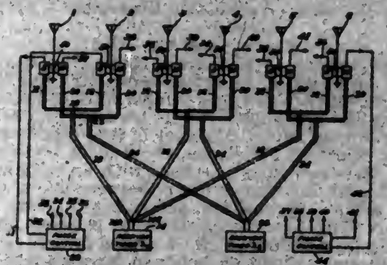
2,444,422
PRODUCING ALUMINUM-COATED IRON OR STEEL
Victor H. Bradford, Upper Montclair, N. J., assignor to Specialties Development Corporation, Bloomfield, N. J., a corporation of New Jersey
No Drawing. Application September 7, 1942, Serial No. 457,582
1 Claim. (Cl. 148—16.6)



The process of aluminum coating an iron or steel base, which comprises subjecting the base to nascent nitrogen at a temperature of between about 950° and about 1150° F. for a time sufficient to produce a superficial layer of iron nitride having a thickness of between about .0005 and about .001 inch, providing the base with an aluminum coating having a thickness of between about .0003 and about .010 inch, and subjecting the base and the coating to a temperature of between about 400° and about 950° F. for a period of between 30 minutes and about 10 hours to form an iron-nitrogen-aluminum complex between the base and the coating adapted to alloy the coating to the base.

2,444,423
INCANDESCENT LAMP AND THE LIKE
Reginald K. Braunsdorff, East Orange, N. J., assignor to Tung-Sol Lamp Works, Inc., Newark, N. J., a corporation of Delaware
Application October 8, 1945, Serial No. 621,847
13 Claims. (Cl. 176—16)

1. In a two-filament incandescent lamp having major and minor filaments supported from the press, the improvement which comprises an angle section of solid zirconium metal wire serving both to support one end of the minor filament and as a getter.

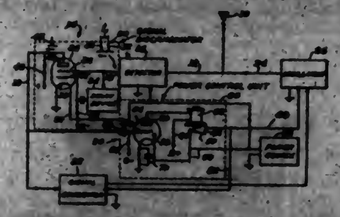


2,444,424
STEEL METALLURGY
William Andrew Brown, Mount Lebanon, Pa., and Francis Sidney Klecman, Lakewood, Ohio, assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application May 12, 1945, Serial No. 593,460
10 Claims. (Cl. 75—58)

1. The process of producing steel having an increased yield point, ultimate strength, elonga-

tion, percentage reduction in area and quality factor which includes the steps of adding to the molten steel pouring into a ladle, as it comes from the furnace at a temperature of 2900° F., 50 mesh silicon carbide, in combustible containers, in the proportion of about 4 pounds of silicon carbide per ton of steel, to produce thorough mixing of the silicon carbide in the molten steel, and retaining the molten steel in the ladle for at least 15 minutes before casting whereby the silicon carbide is decomposed and the steel is deoxidized.

2,444,425
ANTENNA ARRAY
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application August 9, 1943, Serial No. 497,396
20 Claims. (Cl. 343—115)



1. A radio receiving system having a directivity variable in azimuth, comprising a plurality of antennas arranged in a predetermined array, a receiver, coupling means connected between said antennas and said receiver, said coupling means comprising a like plurality of phase changers and a plurality of transmission lines, each antenna being coupled to said receiver through one of said phase changers and through said transmission lines, each of said phase changers being controllably adapted to deliver voltages of a selected magnitude and phase, and a control device connected to said phase changers applying a varying control to said phase changers so that said phase changers deliver voltages of varying magnitude and phase to said receiver.

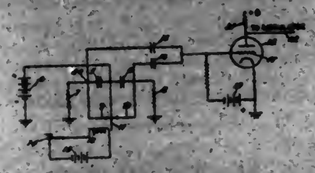
17. In the method of controlling the directivity of reception of radio transmisison from a plurality of antennas arranged in an array, the steps comprising generating voltages of predetermined magnitude and phase, conditioning the energy received from each of said antennas in accordance with said voltages, and cyclically varying said voltages both in magnitude and phase over a range corresponding to the directivity range.

2,444,426
REPEATER CONTROL SYSTEM
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 26, 1943, Serial No. 507,704
5 Claims. (Cl. 250—15)

1. In a location repeater of the character having transmitting means including a signal generator to produce for transmission pulse signals of a given character identifying said repeater and receiving means responsive only to pulse signals of a given repetition rate to cause flow of energy for controlling operation of said signal generator; a power supply, means connecting said power supply to said receiver means to energise the same continuously for normal response to said given repetition rate pulse signals, relay means energizable to connect said power supply

to said transmitting means, and control means comprising an electron discharge device responsive to said flow of energy at said given repetition rate to energise said relay means.

2,444,427
GAS FILLED TUBE
Henri G. Busignies, Forest Hills, and Louis A. de Rosa, West Brighton, Staten Island, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Original application March 26, 1943, Serial No. 480,632. Divided and this application August 19, 1944, Serial No. 550,130
2 Claims. (Cl. 176—122)

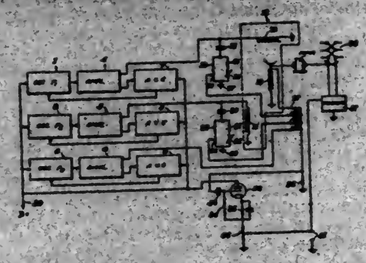


1. A gas filled tube comprising a longitudinal metallic chamber containing an ionizing gas, two pairs of parallel, longitudinally disposed electrodes comprising two cold cathodes and two cold anodes, one anode and one cathode being co-operatively adapted to rectify oscillating energy applied thereto, the other anode and cathode providing a spark gap in said chamber, a partition for dividing said rectifying electrodes from said spark gap electrodes, glass beads for sealing the ends of said longitudinal metallic chamber, and a pair of lead wires connected to said electrodes extending through each of said beads.

2,444,428
SHOE FOR SPORTS AND THE LIKE
Marcel Carrier, Sillans, France; vested in the Attorney General of the United States
Application August 30, 1945, Serial No. 611,541
In France June 3, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires June 3, 1962
3 Claims. (Cl. 36—2.5)

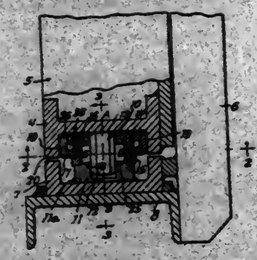
1. In a shoe of the character described a sole; an outer fixed to said sole and forming therewith the lower part of the shoe; an upper part adapted to form a sleeve around the wearer's ankle; concave substantially circular members made of relatively non-yielding material, laterally fixed to said upper part in proper relation therewith to fit the wearer's ankle; and means to positively pivot said upper part to said lower part about a horizontal transverse axis.

2,444,429
PULSE TYPE TELEGRAPH TRANSMITTER AND RECEIVER
Claud E. Cleeton, Washington, D. C.
Application May 15, 1940, Serial No. 335,316
5 Claims. (Cl. 178—66)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A pulse system for code communication, comprising a tube having an anode, a cathode and a grid; an anode resistor connecting said anode to a positive supply source, means to bias said tube at least substantially to cut-off in the absence of a signal, a first and a second storage capacitor connected in series, a source of current connected at its positive side to a point between said capacitors and at its other side to ground, a respective resistor connecting the other side of each said storage capacitor to ground, a respective contact and coupling capacitance connected between each said storage capacitor and the respective resistor, common means connecting said coupling capacitors to said grid, a movable armature connected to a point between said storage capacitors and movable into circuit closing position against either of said contacts but biased to lie against one of said contacts, a relay coil disposed to move said armature against the other said contact when energised, means including a key operable to form a closed circuit to energize said relay coil, whereby a storage capacitor is discharged each time said armature is moved against one of said contacts and a positive pulse is applied to said grid to render said tube transiently conductive and output means connected to said anode, whereby a negative keying pulse is derived each time said tube becomes conductive.

2,444,430
METAL RECTIFIER ELEMENT
Hyman Samuel Denmark, New York, N. Y., assignor to Federal Telephone & Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 13, 1943, Serial No. 494,457
4 Claims. (Cl. 175—366)



1. In a selenium rectifier of the type comprising a base element bearing a selenium layer carrying a counter-electrode and adapted to being supported in operating condition by application of pressure against a portion of the surface of said counter-electrode, the improvements that comprise interposing between the base element and the counter-electrode in the zone underlying the portion of the counter-electrode against which pressure is applied, an electrically insulative body comprising selenium having thallium admixed therewith, the thallium content of said body being in the order of 0.1% based upon weight.

2,444,431
RADIO BEACON TRANSMITTER
Lester Dubin, Brooklyn, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application April 17, 1945, Serial No. 588,843
19 Claims. (Cl. 343—106)

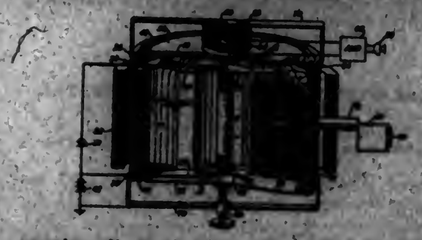
1. In a directionally shiftable radio beacon transmitter, a source of unmodulated signal having a given frequency, means for modulating the amplitude of said signal in accordance with the directional shift of said beacon, and means for mixing said unmodulated signal with the output of said last named means.

2,444,432
TWO-WAY ROLLER GUIDE
William F. Eckert, Rochelle, Ill.
Application January 15, 1945, Serial No. 572,958
6 Claims. (Cl. 308—6)

1. A device of the character described, comprising a forked support, a smaller inner roller rotatably mounted in said support on one axis extending in a predetermined direction with respect to said support, said inner roller projecting from said support and adapted to run on a guide track surface extending in a predetermined plane relative to said support, and a larger outer roller encircling said inner roller and rotatably mounted on said support to turn on an axis in transverse relation to the first mentioned axis and adapted to run on a guide track surface or surfaces in a plane or planes in transverse relation to the aforesaid plane.

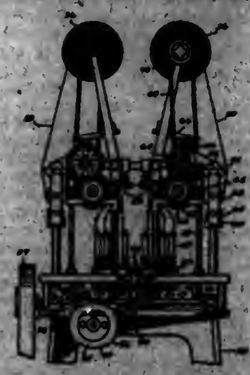
2,444,433
ELECTRICAL CONNECTOR
George H. Erb, South Orange, N. J., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application August 9, 1943, Serial No. 497,888
8 Claims. (Cl. 173—363)

1. In an electrical connector, a tubular socket of conducting material, a spring wire member coiled in irregular fashion to define a recess of smaller diameter than the diameter of said socket, said spring member being positioned within said socket with its periphery contacting the inner surface of the latter at a plurality of points throughout its entire length, said spring member being completely inwardly-bowed between said points of contact with said socket, and a plug receivable in said recess, said plug being of a radius larger than the smallest radial dimension of said spring member, whereby upon insertion of said plug in said recess said plug will first contact the apices of said inwardly-bowed spring portions and then compress said spring outwardly to increase the pressure of said spring against the inner surface of said socket at said plurality of points.



2,444,434
VELOCITY MODULATION DISCHARGE TUBE APPARATUS
Eugene Feenberg, New York, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application January 22, 1943, Serial No. 473,265
6 Claims. (Cl. 315—6)

1. High frequency apparatus comprising means for producing a stream of electrons, means along the path of said stream for velocity modulating said stream, means providing a field-free drift space around the path of said modulated stream to permit said electrons to become grouped, and means along the path of said grouped stream for utilizing said grouped electron stream, said modulating means comprising a hollow cavity resonator having a pair of electron permeable grids as portions of the walls thereof, said grids being insulated from one another with respect to direct currents and positioned in high frequency coupling relation to said stream, said modulating means further comprising means connected thereto for producing a retarding unidirectional electric field between said grids acting on said stream, whereby said drift space may be reduced in size and the losses in said resonator decreased.



2,444,435
FREQUENCY CONTROL OF MAGNETRON OSCILLATORS
James B. Fisk, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 1, 1942, Serial No. 441,405
12 Claims. (Cl. 179—171.5)

1. In a high frequency magnetron device having a plurality of spaced anode surfaces interconnected by a like plurality of open-ended cavity resonators, and in which adjacent anode surfaces and cavities are intercoupled by high frequency electromagnetic fields existing in a region adjacent the open ends of said resonators, a conductive

member disposed adjacent said open resonator ends and in a plane substantially perpendicular to the axes of said resonators and means for varying the position of said member to vary said fields and the coupling provided by said fields.

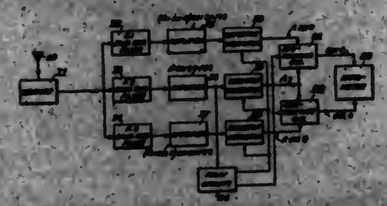
2,444,436
BRAIDING MACHINE
Otto F. Gaspfert, Brevard, N. C., assignor to Endless Belt Corporation, a corporation of North Carolina
Application September 17, 1947, Serial No. 774,575
7 Claims. (Cl. 87—41)

1. A braiding machine comprising at least one pair of rotatable braiding tables formed with radially disposed guideways, carriers for yarn to be braided supported in said guideways, a shipper mechanism for transferring said carriers between said tables, and a cam element arranged for controlling operation of said shipper mechanism whereby said carriers may be selectively rotated with said braiding tables for twisting and transferred between said tables for braiding.

2,444,437
MODULATING SYSTEM
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 29, 1944, Serial No. 547,122
20 Claims. (Cl. 179—171.5)

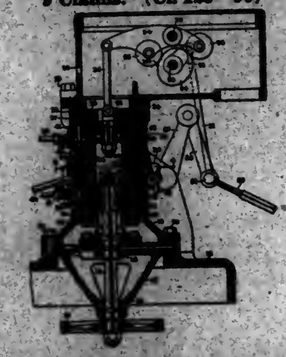
17. Pulse width modulating system comprising a source of electrical pulses, means to produce oscillatory energy in response to each of said pulses, means to eliminate all undulations of the oscillatory energy except the first undulations,

and means to vary the frequency of said oscillatory energy producing means to effect a corre-



sponding variation in the base width of said first undulations.

2,444,438
PULSE GENERATION METHOD
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 7, 1944, Serial No. 548,269
1 Claim. (Cl. 178—44)

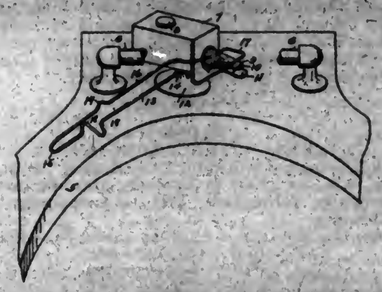


A method of producing a symmetrical triangular pulse, comprising propagating a trapezoidal pulse, the leading or trailing edge of which has a slope corresponding to the slope desired for the leading and trailing edges of said triangular pulse, adjustably reflecting the propagated pulse in reverse polarity and delaying said propagated pulse an amount no greater than the duration of the leading or trailing edge of said input pulse for delayed admixture with energy of said input pulse, and obtaining the pulse energy of said resulting admixture defined by the edges of the input pulse and the reflection pulse having the steepness corresponding to said given slope.

2,444,439
BEACON RECEIVER MEANS
Donald D. Grieg, Forest Hills, Alexander Frum, New York, and Lester Dubin, Brooklyn, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 26, 1945, Serial No. 584,862
19 Claims. (Cl. 177—352)

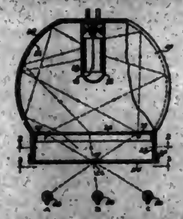
1. In combination with a ratiometer device having two field coils placed at an angle with respect to one another for producing an operating magnetic field, means for supplying a first composite voltage made up of a first signal and of a second signal, means for supplying a second composite voltage made up of a third signal and of said second signal, means for supplying said second signal, circuit means for effecting a subtraction of said second signal from said first composite voltage and from said second composite voltage, and means for applying the two resulting differential signals of said last named means to the said two field coils, respectively.

2,444,440
INTERNAL-COMBUSTION ENGINE
Emil Grieshaber and Karl V. Anderson, Milwaukee, Wis., assignors to Nordberg Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 27, 1946, Serial No. 699,697
9 Claims. (Cl. 123—90)



1. The combination of an internal combustion engine having a crankshaft and an odd number of cylinders arranged to fire serially on a two stroke cycle; means for supplying fuel to said cylinders; a cylindrical distributor valve seat having an annular series of ports related to said fuel supply means to control the operation thereof; a distributor valve coacting with said seat and rotatable relatively thereto, said valve being shiftable relatively to the seat in an axial direction and having two sets of director ports which are caused selectively to coact with the annular series of seat ports by said relative axial shifting of the valve, one set comprising a single director port, and the other two director ports which are diametrically opposed to each other in said valve; means for driving said valve at half the rotary speed of the crankshaft; and control means for shifting said valve in an axial direction relatively to the seat sufficiently to cause one or the other set of director ports to coact with the seat ports.

2,444,441
DEODORIZER FOR TOILET BOWLS
Fred Grinham, Coral Gables, Fla.
Application November 4, 1946, Serial No. 707,711
5 Claims. (Cl. 4—228)



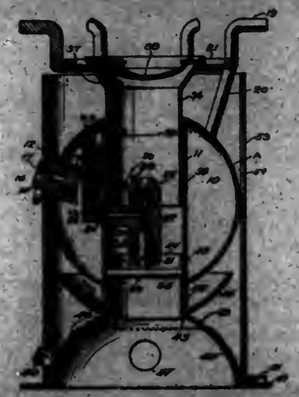
1. A device of the character described comprising a container for a deodorizing liquid, means carried by the container and adapted to engage the top of a toilet bowl to support the container upon the toilet bowl and wholly thereabove and at a point outside of the line of the toilet seat, a dispensing valve carried by the container and means for actuating said valve by movement of

the toilet seat, said means comprising a length of wire bent upon itself to form a pair of runs, the end of one of which runs is secured to the tank and the free end of the other of which runs overlies said valve, said runs being connected at their ends, remote from the tank, by a resilient bend, said runs being of such length and being

disposed in such direction as to project beneath a toilet seat at such a point between said seat and the top rim of the toilet bowl, that downward movement of the toilet seat depresses that run which overlies said valve, against the resilient action of said bend, to thereby actuate said valve to eject some of the deodorizing liquid.

2,444,442
PHOTOELECTRIC APPARATUS
Robert J. Herbold, Denver, Colo., assignor to Lafayette M. Hughes, Denver, Colo.
Application June 29, 1946, Serial No. 680,491
8 Claims. (Cl. 250—41.5)

1. Photoelectric apparatus comprising a photocell having a light activated surface, means including a light shield having a window for transmitting light to substantially all of said surface of the element which causes the intensity of light derived from a given source to vary with the directive angularity thereof relative to the window, and apparatus governed by activation of said element in accordance with a variation in said directive angularity.

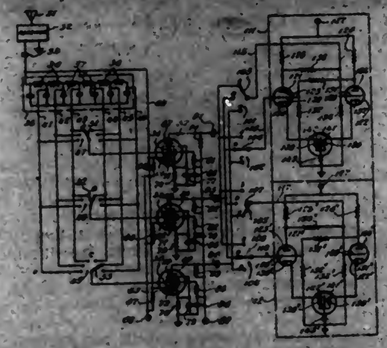


2,444,443
COMPOSITE FLEXIBLE MOISTUREPROOF WRAPPING TAPE OR SHEET
Charles Francis Hesselroth, Los Angeles, Calif., assignor to Minnesota Mining & Manufacturing Company, Saint Paul, Minn., a corporation of Delaware
Application February 10, 1942, Serial No. 475,374
2 Claims. (Cl. 154—50)

1. A flexible water and moisture vapor resistant sheet material of the class described comprising a film of microcrystalline amorphous wax supported and reinforced by a porous fibrous web which is completely and continuously impregnated and covered by the wax throughout, the weight of the wax being at least twice the weight of the fibrous web, the said sheet material being free of any continuous film of hydrophilic material in the interior thereof, its

two surfaces being fiber-free and mutually adherent when pressed together under moderate pressure and its water and moisture vapor resistance being substantially equal in all directions within the sheet throughout its extent.

2,444,444
PORTABLE STOVE
Styles T. Howard, Jeffersonville, Ind.
Application April 17, 1944, Serial No. 531,443
20 Claims. (Cl. 126—44)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A liquid-fuel burner comprising a fuel tank rotatably supported on a base, a flame valve carried by said base, a burner jet mounted on said tank in non-rotatable relation therewith, means for relatively rotating said tank and said base, and means to move said valve into and out of closing relationship with said burner jet as a result of the rotative movement of said tank on said base.

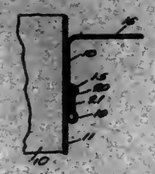
20. A liquid-fuel stove comprising a fuel tank having a burner mounted thereon, and a base, the tank being rotatably mounted on the base, the burner having a flame valve, said valve and said base being interconnected, whereby the valve is operated when the tank and base are rotated relative to each other, socket means on said tank adapted to receive handle means for rotating said tank, and a windscreen positioned on said base so as to surround said tank, said shield being apertured for removably inserting handle means into said socket means to rotate said tank without removing said windscreen.

2,444,445
RADIO NAVIGATION SYSTEM
Eric J. Isbister, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application November 10, 1943, Serial No. 509,666
14 Claims. (Cl. 343—103)

1. In a radio navigation system for a mobile craft, apparatus for determining the difference

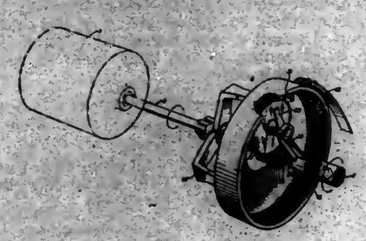
in the distances between said craft and a pair of transmitting stations radiating spaced pulses of electromagnetic energy comprising a receiver, a pair of selectors connected to said receiver and responsive to the spacing of transmitted pulses for

segregating pulse signals of each of said transmitting stations from other received signals, and current reading means actuated by said selectors for providing a measure of the difference in the distances of said craft from said transmitting stations.



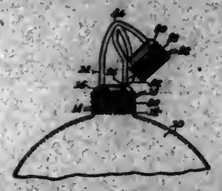
2,444,446
BOOSTER SPRING FOR FOCAL-PLANE SHUTTERS
Robert T. Jackson, Kansas City, Mo.
Application December 11, 1945, Serial No. 634,330
2 Claims. (Cl. 95—57)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The combination with a focal plane shutter having a take-up roller, a wind-up roller, and a curtain stretched therebetween, of booster means including a spring adapted to be stressed after a predetermined degree of rotation of said take-up roller during wind-up travel of said curtain, a pinion adapted to rotate with said take-up roller during wind-up operation of said curtain, a gear engaging said pinion and adapted to rotate about a relatively fixed axis, a lever rotatively mounted about the same axis, a pin secured to said gear and adapted to engage said lever upon a predetermined degree of rotation of said gear, said spring having a portion secured to a portion of said lever, whereby engagement of said pin with said lever stresses said spring for the purpose of providing by reaction thereof a counter-rotational force to said stud to supplement the normal force of said take-up roller upon tripping of said shutter.



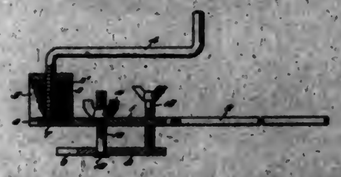
2,444,447
HINGED HANDLE FOR UTENSILS
Winser Jesselyn, United States Army, San Francisco, Calif.
Application April 12, 1945, Serial No. 588,607
4 Claims. (Cl. 220—94)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. In a utensil of the class described, a hinge pin secured to said utensil, a handle having a hinge arm adapted to pivot around said hinge pin, two knuckles on the free end of said hinge arm, said knuckles being spaced longitudinally on said hinge arm and adapted to selectively and releasably engage said hinge pin, said hinge arm being shiftable perpendicularly to the axis of pivotal movement of said hinge arm from a position wherein one of said knuckles pivotally engages



said hinge pin to a position wherein the other knuckle non-pivotally engages said hinge pin, said free end of said hinge arm being in said second-named position in abutting engagement with said utensil at a point spaced from said hinge pin, whereby relative rotation of said utensil and said handle in the direction of such point of abutment is prevented in said second-named position.

2,444,448
PLANETARY GEAR UNIT
Walter F. Kannenberg, Lyndhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 1, 1945, Serial No. 570,952
5 Claims. (Cl. 74—291)

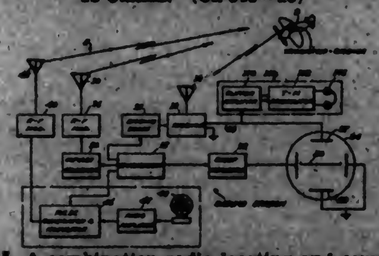


1. In a planetary gear mechanism comprising mutually cooperating sun, planet and ring gears, a driving shaft for rotating said sun gear, a driven shaft coaxial with the driving shaft, braking means for frictionally impeding said ring gear against rotation to cause planetary movement of said planet gear about said shaft axis, means comprising a crank member fixedly mounted on said driven shaft and rotatably supporting said planet gear for causing said planetary movement to rotate said driven shaft, screw-threaded means responsive to rotation of said driven shaft for axially displacing said driven shaft with respect to said ring gear, and other means comprising stop members fixedly associated with said driven shaft and ring gear adapted to cooperate in response to predetermined axial displacement of said driven shaft in either direction, depending on the direction of rotation of said driven shaft, to effect a direct coupling between said two shafts.

2,444,449
VALVE STEM
Cresson H. Kearny, United States Army, Fort Clayton, C. Z.
Application March 27, 1943, Serial No. 480,881
3 Claims. (Cl. 251—5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A valve adapted to be attached to an inflatable object and comprising a resilient body member having a free end, the said body member also having a passage therethrough and a wall of substantial thickness, an end portion of the body member being arranged to be folded upon itself, a pair of diametrically opposed elastic members connected to actuate the end portion to a folded position against an adjacent portion of the body member for closing the passage, with the end portion of the body member being adapted to be manipulated to open the passage against closing tendency of the elastic members on the body member, the elastic members being operatively disposed relative to the body member and connected to the end portion so that when the end portion is in a raised position approaching dead center, the thickened wall pulls the body member erect against the action of the elastic members, and means mounted on the said elastic members for causing the said end portion of the body member to fold to one side of the body member responsively to manipulation of the said end portion through a predetermined distance away from dead center of the body member relative to the inflatable object.

2,444,450
CHAIN TOOL
John A. Kellgren, Regina, Saskatchewan, Canada
Application February 18, 1946, Serial No. 648,326
4 Claims. (Cl. 59—7)

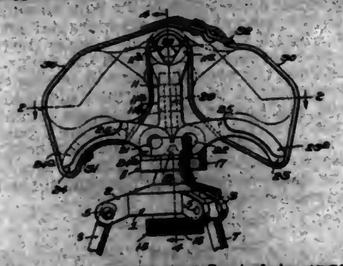


1. In a tool for detaching a link from a chain, an elongated flat clamping head having a handle, a clamping plate opposed flatwise to said head, means to suspend said plate from the head for swinging movement thereon into clamping relation thereto, hand screws threaded through said head for turning against said plate to swing the same, a rotary stem threaded through said head for feeding toward said plate, a presser member on one end of said stem for exerting pressure against a link of a chain clamped between said head and plate, and manipulative means on the other end of said stem for rotating the same.

2,444,451
FLUID COUPLING
Beecher Olen Kelso, Portland, Maine, assignor to Utilities Distributors, Inc., Portland, Maine, a corporation of Maine
Application October 18, 1945, Serial No. 623,126
11 Claims. (Cl. 284—18)

11. A detachable valve-coupling unit having, in combination, a housing, gripping means mounted on said housing for detachably gripping an inlet nipple, a fluid conduit defining member movable with respect to said housing and said gripping means, a valve in said conduit, a valve stem associated with said conduit member and extending therebeyond for engagement against an obstruction provided by the inlet nipple to be coupled to open the valve, a cam shaft journalled in the housing, an operating handle for moving said cam shaft from an off to an on position, a cam on said shaft rendered operative by a first portion of said shaft movement for actuating the gripping means, and a cam on said shaft rendered operative during the latter portion of said shaft movement for moving the conduit member relative to the housing.

2,444,452
OBSTACLE DETECTION AND COMMUNICATING SYSTEM
Emile Labin, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application December 11, 1943, Serial No. 513,916
18 Claims. (Cl. 343—13)



15. A combination radio locating and communicating system comprising means for transmitting a train of impulses, means for detecting the echo pulses caused by the presence of a craft, such as an airplane or ship, within a given range corresponding to a given part of the time interval between successive impulses, means for transmitting a train of signal pulses synchronized for occurrence only during the remaining portion of said time interval, and demodulator means coupled with said detecting means for reception of signals in answer to said signal pulses.

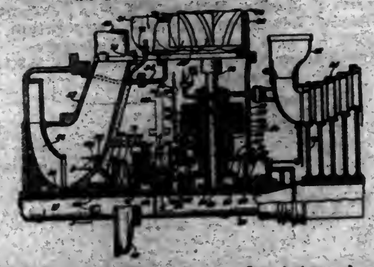
2,444,453
BINOCULAR MOUNT
William B. Larsen, Glen Ridge, N. J.
Application January 10, 1947, Serial No. 721,327
3 Claims. (Cl. 88—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a support for a pair of binoculars having right and left halves interpivoted by a pivot joint,

a head, a standard carried by said head and having means at its upper end to engage and support said pivot joint, right and left wings each pivoted in said head on an axis parallel to the axis of said joint when so supported, each said

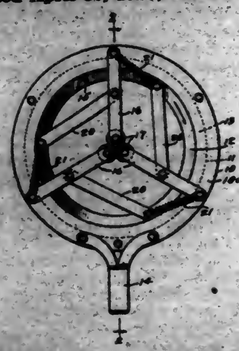
wing having a surface adapted to engage and support the said right and left halves, respectively, for all interpivoted adjustments thereof, and means interconnecting said wings for simultaneous equal and opposite pivotal movement.

2,444,454
EVAPORATOR FOAM CONTROL APPARATUS
Walter B. Leaf, Denver, Colo.
Application March 10, 1943, Serial No. 478,616
9 Claims. (Cl. 252—361)



1. In apparatus for retarding foam and froth formation in boilers and pressure vessels, inclusive of a container for a body of liquid subject to evaporating influences and having foam-producing bubbles rising therethrough, the improvement which comprises a partitioning member supported in overhanging relation to the liquid body, said partitioning member having a plurality of vertically directed passages to permit escape of vapors or bubbles formed by said evaporating action, said passages having a lower intake opening of a size to admit a plurality of bubbles concurrently and in spaced relation and having a laterally-directed upper discharge outlet restricted sufficiently to induce coalescing engagement and rupture of a plurality of bubbles admitted simultaneously to the passage.

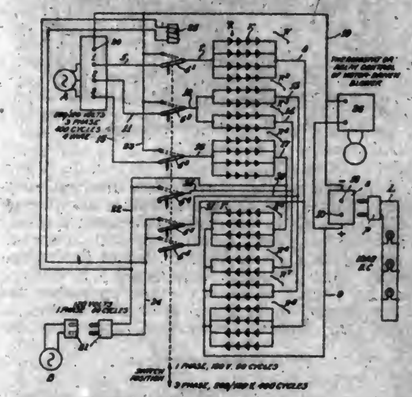
2,444,455
STATIC REDUCING PULSE RECEIVER
Emile Labin, New York, N. Y., and Rees B. Hoffman, East Orange, N. J., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application September 9, 1943, Serial No. 501,698
5 Claims. (Cl. 250—20)



1. A radio pulse receiver for reproducing received impulses in substantially the same relative time relation and the same relative amplitude as originally transmitted, and at the same time improving the signal-to-noise ratio of the signals, comprising filter means for passing substantially only a single frequency component of each received impulse, means for limiting each said passed component substantially to a single half-oscillation, to produce a pulse substantially the width of said half-oscillation, and means for passing only the portions of said pulses above a predetermined voltage level.

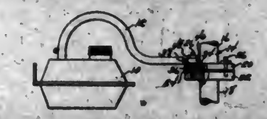
2,444,456
SUPERCHARGING SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Alf Lysholm, Stockholm, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, New York, N. Y., Leslie M. Merrill, Westfield, N. J., and Percy H. Batten, Racine, Wis., as trustees
Application August 19, 1943, Serial No. 499,216
22 Claims. (Cl. 60—13)

1. A supercharging system for internal combustion engines including a dynamic compressor for delivering air to the engine cylinders, a rotary positive displacement compressor for compressing atmospheric air to be supplied to the engine through said dynamic compressor, a turbine driven by engine exhaust gas for operating the positive displacement compressor and means for driving said dynamic compressor from the engine.



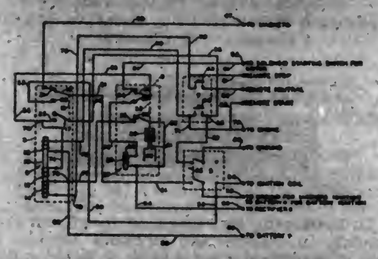
2,444,457
METAL LENS HOLDER
Graham W. Marks, Frank Cossey, and Ralph S. Mills, Salt Lake City, Utah, assignors to the United States of America as represented by the Secretary of Interior
Application July 7, 1947, Serial No. 759,460
1 Claim. (Cl. 88—57)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A holder for temporarily mounting an optical element comprising a pair of concentrically mounted frames, a plurality of arms pivoted to one of said frames and having means at their



free ends adapted to engage edge portions of an optical element, a plurality of levers pivotally connected at one end to the other of said frames, means pivotally connecting the free ends of said levers to intermediate points of said arms whereby the rotation of one frame with respect to the other in one direction will cause said element engaging means to move convergingly toward one another for impingement upon an optical element, impelling means normally urging said directional rotation of the frames, means for reversely rotating said frames against the tendency of said impelling means whereby an optical element may be inserted or released.

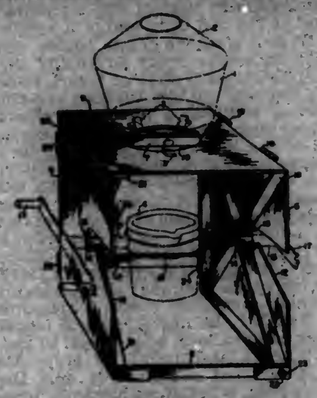
2,444,458
RECTIFYING SYSTEM
Warren S. Master, Rutherford, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application April 29, 1944, Serial No. 533,413
7 Claims. (Cl. 175—363)



1. A rectifier system for obtaining predetermined average direct current voltage outputs from alternating current sources having different characteristics, comprising a plurality of rectifier units, a circuit system connecting the units to one source in a series parallel arrangement and producing a predetermined direct current average output voltage, a circuit system connecting the same units to another source in a bridge arrangement producing a predetermined direct current output voltage, said other source having different characteristics and means for switching the units from one circuit arrangement to another.

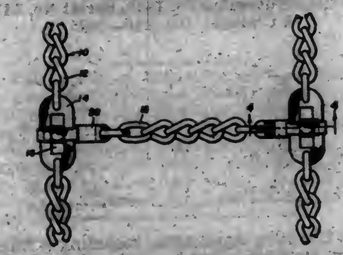
2,444,459
CONNECTOR
Duncan J. Macpherson, South Lancaster, Palma A. Lefebvre, Cornwall, and William Escott, Lancaster, Ontario, Canada
Application September 7, 1943, Serial No. 501,476
1 Claim. (Cl. 285—130)

A means for introducing extraneous matter such as moist air and the like into a sectional conduit having bolted flanges and a gasket between the flanges, comprising a hollow head having a tube extending at right angles therefrom centrally of the periphery thereof and communicating with a source of moist air or the like, said head arranged about one of the bolts, a bore in said head of larger internal diameter than the bolt, an annular flange on the head at the upper marginal edge of the bore, and the lower marginal edge of the head being sealed between the bolt and the flange, the space between the bore and the bolt having communication with a passage formed alongside of the flange bolt holes and said passage communicating with the fuel conduit through a passage formed in the gasket between the bolt hole and the passage, and a filler sleeve in the head between the flange thereon and the nut on the bolt and clamped by the nut.



2,444,460
REMOTE-CONTROL SYSTEM
John L. Moncrief, Eatontown, N. J., assignor to the United States of America as represented by the Secretary of War
Application February 5, 1946, Serial No. 645,678
3 Claims. (Cl. 290—37)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

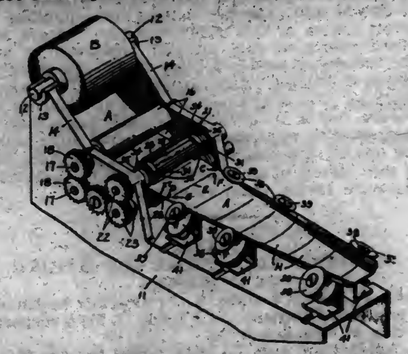
1. In a system comprising an internal-combustion engine including an ignition system, and a choke, a motor for starting the engine, battery charging means, and a battery for starting the motor; control means comprising a starting switch, a relay comprising an electromagnet and an armature, the electromagnet comprising first and second windings, means for energizing the first winding, on closing the starting switch, to actuate the armature, means operable, on actuation of the armature, to actuate the ignition system, means for actuating the choke only as long as the starting switch is closed, means for energizing the second winding of the electromagnet to hold the armature in actuated position and permit opening of the starting switch, means for connecting the battery to the motor to start the latter, means for disconnecting the battery from the motor after the engine has started, and means for connecting the battery to the battery charging means after disconnection from the motor.



2,444,461
SUPPORT FOR CRUCIBLES AND LADLES
Robert E. Morey, Washington, D. C., and Robert C. Wayne, United States Navy
Application January 11, 1946, Serial No. 640,635
3 Claims. (Cl. 22—79)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

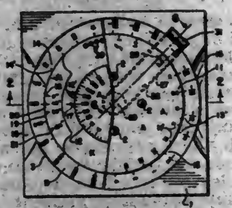
1. In a collapsible mounting structure for supporting a reaction crucible over a ladle, a pair of spaced substantially parallel, side plates, each of said side plates having a notch formed in the forward edge and extending substantially to the middle thereof to receive a ladle support, a top plate pivotally mounted on the upper edge of one of said side plates and extending to the other of said side plates, means for securing said top plate

to the latter side plate, said top plate having an aperture formed therethrough to receive the lower portion of the reaction crucible, and cross members pivotally fixed to and extending between the rear and front edges of said side plate.



2,444,462
AUTO CHAIN
Lloyd P. Merton, Great Falls, Mont.
Application June 4, 1947, Serial No. 752,454
3 Claims. (Cl. 152—242)

2. A tire chain comprising circumferentially disposed side chains, links interposed in the side chains at selected points thereof and having substantially rectangular openings, cross chains, latch plates at the terminal portions of the cross chains, and substantially rectangular latch bars projecting outwardly from said latch plates for lockably engaging the openings in said links upon a twisting of said latch plates.



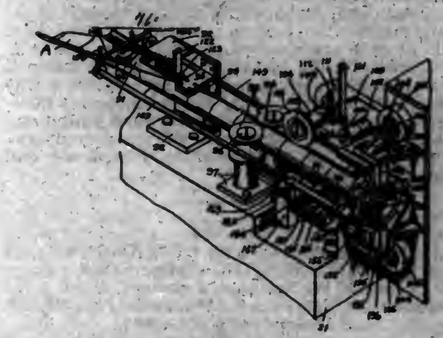
2,444,463
METHOD OF PRODUCING CAN BODIES
Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application June 26, 1945, Serial No. 601,624
2 Claims. (Cl. 113—120)

1. The method of making tubular can bodies from a strip of sheet metal continuously moving in the direction of its longitudinal axis, the strip being of a width substantially that of the circumferential dimension of the can body and of a length sufficient to form a plurality of can bodies, which comprises simultaneously cutting through and scoring the continuously moving strip to produce a series of three spaced aligned slits joined by intermediate scored portions lying on a line transverse to the longitudinal axis of the strip, the slits including a central long slit and two adjoining short slits respectively extending through the opposed longitudinal margins of the strip, successively similarly cutting and scoring the continuously moving strip on other transverse lines spaced longitudinally of the strip at

intervals equal to the length of a single can body, progressively forming the continuously moving strip into an elongated tube with the longitudinal strip margins in engaged relation with the short slits of each transverse line in registry, continuously metallically bonding the engaged margins of the continuously moving tube to form a side seam, and finally bending the continuously moving bonded tube at successive forward slitted circumferential lines to break the unsevered portions thereof to produce unitary separate can bodies therefrom.

2,444,464
DEVICE FOR USE IN DETERMINING PHOTOGRAPHIC EXPOSURES
Donald W. Norwood, Pasadena, Calif.
Application February 8, 1947, Serial No. 727,338
3 Claims. (Cl. 235—64.7)

1. In a device for calculating photographic exposure, the combination comprising: a plurality of exposure factor scale members and a key light angle scale member interconnected for relative rotation about a common axis; said exposure factor scale members being provided with concentric scales indicative of different exposure factors, including a scale indicative of intensity of the main or "key" illumination falling upon a photographic subject, each of said exposure factor scales having a plurality of angularly spaced indicia representing different values of the corresponding exposure factor; said key light angle scale member



being provided with a reference mark positioned to register with the indicia of a coacting scale on one of said exposure factor scale members, and being also provided with a plurality of angularly spaced indices positioned to register with the indicia of a coacting scale of another of said exposure factor scale members and representing different angular relationships between the camera axis and the direction of the main or "key" illumination at the position of the photographic subject; said scale members being adapted to be set, by relative rotation, to indicate the proper value of one of said exposure factors corresponding to given values of the other exposure factors and given values of said angular relationship; and the indices on said key light angle scale member being so located with respect to said reference mark as to modify the indication of said one exposure factor in accordance with variations in said angular relationship, when the corresponding one of said indices is set to register with any of said indicia of said coacting scale on said other exposure factor scale member.

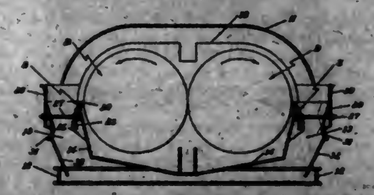
2,444,465

METHOD AND MACHINE FOR MAKING CAN BODIES

John F. Peters, Leonia, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application July 11, 1945, Serial No. 604,396
7 Claims. (Cl. 113—120)

1. The method of making tubular can bodies from a strip of sheet metal moving in the direction of its longitudinal axis, the strip being of a width substantially that of the circumferential dimension of the can body and of a length sufficient to form a plurality of can bodies, which comprises cutting a plurality of spaced aligned slits through the continuously moving strip on a line transverse to the longitudinal axis of the strip to leave aligned uncut portions at the ends of the line at opposite margins of the strip, successively similarly cutting spaced aligned slits through the continuously moving strip on other transverse lines spaced longitudinally of the strip at intervals equal to the length of a single can body, progressively forming the continuously moving strip into an elongated tube with the uncut longitudinal strip margins disposed in engaged relation, continuously securing together the uncut engaged margins of the continuously moving strip to form a side seam in the tube, and finally projecting cutting elements at substantially only the unsevered portions of each successively presented forward slitted circumferential line of the continuously moving seamed tube to cut through all of such portions and produce unitary separate can bodies therefrom.



4. A machine for making tubular can bodies from a strip of sheet metal moving in the direction of its longitudinal axis, said strip being of a width substantially that of the circumferential dimension of the can body and of a length sufficient to form a plurality of can bodies, comprising means for continuously advancing the strip along a predetermined path of travel, means for cutting a plurality of slits through the continuously moving strip on a line transverse to the longitudinal strip axis to leave uncut portions at the ends of the line at opposite margins of the strip, means controlling actuation of the cutting means so that it successively similarly cuts the continuously moving strip on other transverse lines spaced longitudinally of the strip at intervals equal to the length of a single can body, means adjacent said strip for progressively forming the continuously moving strip into an elongated tube with the uncut longitudinal strip margins disposed in engaged relation, means for continuously securing together the uncut engaged margins of the moving strip to form a side seam in the tube, cutting elements, and means for projecting the cutting elements at substantially only the unsevered portions of each successively presented forward slitted circumferential line of the continuously moving seamed tube to cut through all of such portions and produce unitary separate can bodies therefrom.

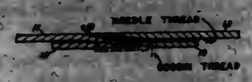
2,444,466

SCRAPING DEVICE FOR ROTARY DRUM FILTERS

C. Lynn Peterson, Salt Lake City, Utah, assignor to Peterson Filters and Engineering Co., Salt Lake City, Utah, a partnership

Application November 23, 1943, Serial No. 511,413
4 Claims. (Cl. 210—201)

1. In filtration apparatus, including a filtering medium movable along a path which includes passage through a body of fluent matter for the deposition of a cake of solid particles thereon and movement in a generally downward direction for the removal of such deposited cake; a scraping device comprising a blade extending horizontally across the surface of said filtering medium at the cake removal position; a horizontally adjustable support adjacent each end of said blade; and a vertically adjustable guide for each support having a substantially horizontal guide surface along which said support is movable.



2,444,467

ELASTIC SEAM WITH CONCEALED ZIGZAG STITCHING

Max Pepper, Brooklyn, N. Y.

Application June 22, 1944, Serial No. 541,633
2 Claims. (Cl. 112—262)

1. The method of forming a flat and ridgeless butterfly seam for a garment by joining together two bias-cut sections of fabric, which comprises folding an edge portion of one section against the bottom face of said section, placing the other section on top of the first section whereby the folded over portion of the first section appears below both of said sections, uniting said sections by two-thread zig-zag stitching in slightly spaced longitudinal lines, one longitudinal line extending over and beyond the folded edge and piercing only a single layer of downpressed fabric, and the other longitudinal line piercing both of said sections of fabric including said folded edge, said line of zig-zag stitching extending over and beyond the said folded edge holding said down-

pressed layer and providing triangularly disposed cross-threads having inherent elasticity and permitting said seam to yield in extended coacting relation with yielding of said bias-cut fabric sections, said cross-threads serving to prevent the formation of sharply defined and ridged folded edges, turning the garment in which said seams are formed inside out and causing each single layer of fabric to hinge over said cross-threads, pressing said seamed portions to flatten said portions and with zig-zag stitching substantially concealed from view on said normally exposed surface.

2,444,468

LINOLEUM TYPE SURFACE COVERING

Paul O. Powers, Manheim Township, Lancaster County, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

Application August 17, 1943, Serial No. 499,001
7 Claims. (Cl. 154—25)

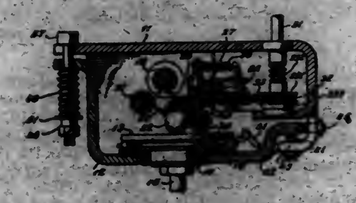
1. The process of preparing linoleum type surface coverings having a woven cotton backing which comprises substantially inhibiting the backing against dimensional changes by impregnating it with an effective amount of a water-soluble carbamide-formaldehyde condensate, drying the cloth, applying a wearing layer of the linoleum type to one face of the cloth, and heating the coated cloth.

2,444,469

METHOD OF MANUFACTURE AND CONSTRUCTION OF SOLENOIDS, MAGNETS, AND COILS, AND THE PROTECTION OF THE WINDING THEREOF

Osborne I. Price, Frederick, Md., assignor to Magnetic Devices, Inc., Frederick, Md., a corporation of Maryland

Application October 9, 1944, Serial No. 557,820
2 Claims. (Cl. 154—90)



1. The method of constructing a magnet which comprises forming a magnetic core with a metallic end flange, abutting the metallic end flange with a semi-soluble insulation coil end coextensive with a substantial surface area thereof, applying a magnetic coil to the core, abutting the end of the coil with a semi-soluble insulation coil end, abutting the semi-soluble insulation coil end with a metallic end flange coextensive with a substantial surface area thereof, winding a semi-soluble layer of thread-like insulation material over the magnetic coil and treating the assembly with a chemical solvent for flowing the insulation material of the coil ends and the thread-like insulation material into a homogeneous mass for protecting the magnetic coil intermediate the metallic end flanges.

2,444,470

VARIABLE-SPEED MECHANISM

Charles H. Richardson, Great Neck, N. Y., assignor to The Sperry Corporation, a corporation of Delaware

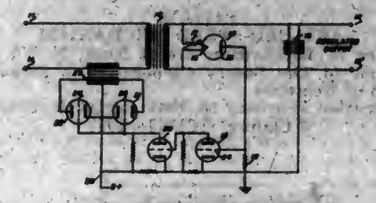
Application February 28, 1944, Serial No. 524,305
8 Claims. (Cl. 74—193)

1. A variable speed mechanism comprising a two-part casing having a fulcrum joint at one side, a rotary driving member carried by one of said parts, a driven member supported in the other of said parts for rotation about an axis, a pair of balls for transmitting motion from said driving member to said driven member, guide rollers for retaining said balls with their centers offset transversely of said axis, and resilient means exerting pressure tending to move the two parts of said casing together about said fulcrum joint to cause said members to exert pressure on said balls for maintaining frictional driving engagement between said balls and said members.

2,444,471

SWITCH

David Samiran, Osborn, and George W. Replogle, Dayton, Ohio



Application September 29, 1943, Serial No. 504,264
3 Claims. (Cl. 200—6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an electric switch, a common contact adapted for connection to a source of current supply, a series of insulatedly spaced contacts each adapted for connection to a separate current receiving device, a brush member adapted for bridging from the common contact to the series of contacts one at a time, and a snap action means associated with said brush member oper-

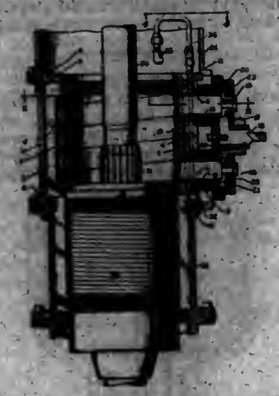
able to cause said brush member to move off one contact member of the series, make instantaneous contact with a second of the series and stop on a third.

2,444,472
VOLTAGE REGULATOR CIRCUIT
Allen H. Schooley, Washington, D. C.
Application June 19, 1943, Serial No. 491,470
1 Claim. (Cl. 322—39)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A means for regulating the output voltage of a transformer, comprising a thermionic vacuum tube having a filamentary heater and a plate, said heater connected across the output terminals of said transformer in such a manner that its thermal emission varies in accordance with the change in output from said transformer, a resistance means disposed in series with said heater and adjusted to operate said heater at a predetermined value below its rated voltage, an amplifier circuit, means connecting the output of said vacuum tube to the input of said amplifier circuit, a pair of electron discharge devices each having an anode, a cathode and a control electrode, a second transformer having the primary winding thereof connected in series with the input to said first transformer and the secondary winding connecting the anodes of said discharge device in push-pull, and means supplying the output of said amplifier circuit in parallel to the control grids of said discharge devices to thus control the impedance reflected into the primary circuit of said first transformer by said second transformer.

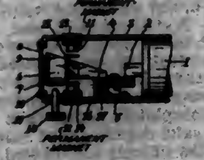
2,444,473
METHOD OF MAKING RECTIFIERS
Murray F. Skinker, Montclair, Leslie B. Haigh, West Orange, and Ralph O. Hall, East Orange, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 26, 1943, Serial No. 507,670
14 Claims. (Cl. 175—366)

1. The method of making rectifiers, which includes the steps of punching a plurality of buttons partially out of a sheet of metal plate, applying a layer of rectifying material to the top of each button, pressing and heat treating the rectifying material, placing a mask of insulating material over the partially punched-out buttons, said mask having a plurality of openings therethrough smaller than and coinciding with each partially punched-out button, applying a counter-electrode alloy over said mask and through said openings to contact the rectifying material on the buttons, and then removing the button-shaped rectifiers from their original metal plate and said mask of insulating material in such a way as to leave a marginal ring of this material on the rectifying coating.



2,444,474
FLUID PRESSURE DEVICE
Howard E. Somes and Benjamin R. Purvin, Detroit, Mich., assignors, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application June 6, 1944, Serial No. 538,976
5 Claims. (Cl. 121—40)

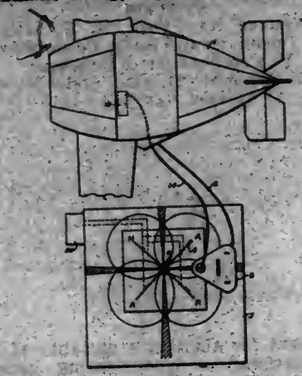
4. A fluid operated device including a cylinder element and a piston element operating in the cylinder to define two pressure chambers therewith, said fluid operated device having first and second fluid passageways for conducting fluid to and from said chambers to effect elevating and lowering movement of one of said elements, two outlets from the first passageway to its cylinder chamber, a check valve for a first one of said outlets for preventing return flow from the chamber to said first passageway, valve means for the second one of said outlets, and means responsive directly to pressure of fluid in said second passageway and through the pressure of fluid in said second passageway which is made dependent upon pressure of fluid in said first passageway for keeping said valve means open during operation except upon pressure failure in either the first or second passageway.



2,444,475
COIL AND CORE ARRANGEMENT
Howard E. Somes, Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application October 7, 1944, Serial No. 557,607
6 Claims. (Cl. 175—356)

2. In a device of the character described an iron core of annular formation having circumferentially spaced ends and a helical conductor concentrically disposed adjacent and insulated from said core, said conductor having radially extending ends disposed in the space between said ends, a metallic, non-magnetic member disposed in said space in engagement with said core ends, said conductor ends extending through said member and means for insulating said member, said

member having passage means therein for the circulation of cooling fluid.

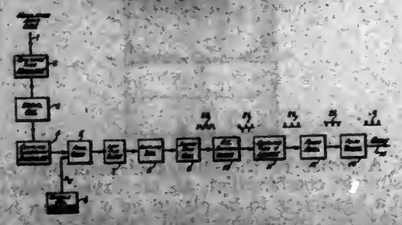


2,444,476
ELECTRIC ANNUNCIATOR DROP
Franklin A. Stearn, East Newark, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 24, 1946, Serial No. 692,904
7 Claims. (Cl. 177—329)

1. An electromagnetic signalling device comprising an electromagnet, an energizing circuit for said magnet, an armature displaceable between a normal and an attracted position, signal means operable in one of said positions of the armature, magnetically susceptible means secured to said armature, and a permanent magnet magnetically insulated from the electromagnet and positioned for magnetic cooperation with said susceptible means in one of said positions of the armature.

2,444,477
AUTOMATIC MINIATURE RADIO RANGE FOR STUDENT TRAINING
Raymond K. Stout, Dayton, Carl W. Muller, Osborn, and Carl J. Crane and George V. Helleman, Dayton, Ohio
Application February 26, 1940, Serial No. 320,878
21 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

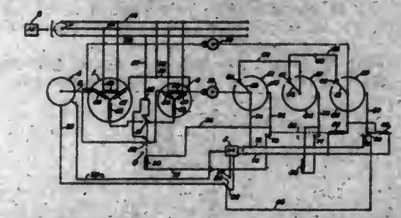
20. In an automatic signalling system for aviation ground trainers, a reference surface, a radiant energy signal generating device for emanating radiant energy signals adjacent said reference surface in a predetermined pattern in space relative to a predetermined point on said reference surface, and a signal pickup relatively movable with respect to said surface for picking up said radiant energy signals dependent upon the



position of said pickup relative to said predetermined point.

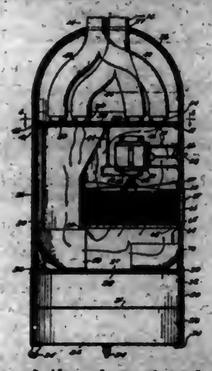
2,444,478
TETRACHLOROBUTYRONITRILE
John W. Teter and Oscar W. Bauer, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 14, 1944, Serial No. 558,750
1 Claim. (Cl. 260—465.7)

Tetrachlorobutyronitrile in which the two 2-positions are substituted by chlorine, and which has a boiling point of approximately 113.5° C. at a pressure of 50 mm. of mercury and a density of approximately



d_4^{20} 1.4862

2,444,479
FREQUENCY-MODULATED PULSE GENERATOR
Bertram Trevor, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 8, 1944, Serial No. 517,537
7 Claims. (Cl. 179—171.5)



1. A frequency modulated pulse generator system comprising two oscillators producing oscillations of different frequencies, means for modulating the frequency of one of said oscillators in accordance with the signal modulation, a frequency converter coupled to the outputs of said two oscillators for producing a difference frequency, a coupling tube in the output of one of said oscillators for preventing interaction between said oscillators, a low pass filter in the output of said converter, and a square wave generator having two degrees of electrical stability coupled to said filter and under control of the output of said frequency converter.

2,444,480
ELECTRIC MOTOR SYNCHRONIZING SYSTEM
Fred C. Wallace, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 21, 1945, Serial No. 630,066
14 Claims. (Cl. 318—19)

1. A system for aligning a plurality of rotary loads, comprising a synchronizing generator, means for driving said generator at a given speed, a self-synchronizing motor coupled to the output of said generator for driving each rotary load, a reduction gearing means intermediate each motor and load, commutator means coupled for rotation with each load, means in circuit with said commutator means for successively aligning said loads, and means responsive to said alignment for increasing said given speed.

2,444,481
HAIR DRIER
Thomas W. Watkins, Washington, D. C., assignor to Beauty Research, Incorporated, a corporation of Delaware
Application October 23, 1946, Serial No. 705,060
3 Claims. (Cl. 34—86)

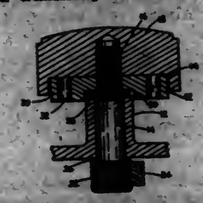
1. A device of the character described, comprising in combination, an air dryer apparatus and a headpiece to be placed on a human head, means for connecting said headpiece to said apparatus so air may be forced from said apparatus into said headpiece, chemical means in said apparatus for absorbing moisture from said air, a transverse partition in said apparatus, a plurality of upstanding tubular air inlets and outlets formed on the upper surface of said partition, the means for connecting said headpiece to said apparatus being connected to said outlets, a funnel shaped partition in said apparatus below said transverse partition, a circular shaped partition in said apparatus below said transverse partition and parallel with said funnel shaped partition, passages in said partition forming a communicating way between said partition to control the flow of air in said apparatus, air deflectors in said apparatus below said partitions to aid in directing the air through said funnel shaped and said circular shaped partitions, and means in said apparatus for circulating said air.

2,444,482
ELECTRON TUBE WITH EXTERNAL ANODE
Arthur K. Wing, Jr., Nutley, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 14, 1946, Serial No. 654,270
3 Claims. (Cl. 250—27.5)

1. An electron tube comprising a glass portion forming part of the envelope of said tube, a metal electrode forming another part of the envelope of said tube, and a metal-to-glass seal therebetween, said metal electrode being tapered to a point in the region of said seal, said electrode being subject in its operating region to temperatures detrimental to said metal-to-glass seal, and said electrode having an area of substantially reduced cross-section, said reduced cross-sectional area completely separating said operating region from said region about said seal for preventing the flow of heat to said seal.

2,444,483
FILAMENT SUPPORT
Arthur K. Wing, Jr., Nutley, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 23, 1946, Serial No. 671,829
5 Claims. (Cl. 250—27.5)

1. A structure supporting a double helical filament, said structure comprising a central supporting rod and a pair of side rods, the midpoint of the filament being attached to the central rod, and the ends of the filament being attached to respective ones of the side rods, an insulating member having a hole in it and slidably placed over the central supporting rod, and a pair of spacing members attached to the insulating member and extending to and attached to a respective one of the side rods.



2,444,484
FACSIMILE TELEGRAPH SIGNAL RECORDER
Raleigh J. Wise, Dunellen, and Robert D. Parrott, West New York, N. J., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application August 5, 1944, Serial No. 548,194
8 Claims. (Cl. 234—48)

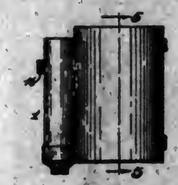
1. In a facsimile recording apparatus, means for supporting an electrosensitive record receiving medium, a record receiving medium advancing means, a rotatable member with a helical ridge extending around the axis of rotation thereof, a rod supported on an axis substantially parallel to the axis of rotation of said helical ridge carrying member and movable toward and away from said ridge in a path substantially radially with respect thereto at said ridge, said record receiving medium being arranged to pass between said rod and said helical ridge in moving from the source of supply thereof to said advancing means, means including said rod for pressing the record receiving medium into contact with said helical ridge whereby successive lines thereon are scanned and marked in accordance with received facsimile signals by said ridge as the same rotates and said medium is advanced, and means for guiding said medium to and from said rod, the rod and the axis of support thereof and said guiding means being in substantial alignment, said rod being between the axis of support therefor and said guiding means whereby the tension produced in the direction of the length in said medium by said advancing means has substantially no effect in varying the pressure of said medium against said ridge.

2,444,485
CONTROL KNOB AND ASSOCIATED STRUCTURE
Thomas G. Aitchesen, Kenmore, N. Y., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application February 24, 1947, Serial No. 730,094
5 Claims. (Cl. 74—553)

5. In a device of the character described having an apertured supporting panel or the like, the combination of a rotatable control shaft extending outwardly through said aperture and provided with a screw threaded outer end, a manual control knob assembly carried upon the shaft and adapted to be secured in relatively close relation to said panel, said assembly comprising a main body member having a screw threaded opening formed centrally therein and extending partially through said main body member from the rear to a location adjacent the front surface thereof, said main body member also being provided with a circular recess formed in its rear wall and arranged concentrically with respect to said threaded opening, and an auxiliary body member having a threaded opening extending centrally therethrough and a peripheral surface arranged concentrically with respect to said last mentioned opening, said auxiliary member being of a diameter slightly less than the diameter of said recess so that a portion thereof may extend into said recess and provide when moved into firm engagement with a surface forming said recess a frictional engagement between the threads on said members and on said shaft for locking said assembly in adjusted position, and aperture means formed in the rear wall of said auxiliary body member for engagement by a relatively flat tool or the like when said control knob assembly is being adjusted or locked upon said shaft in close proximity to said supporting panel.

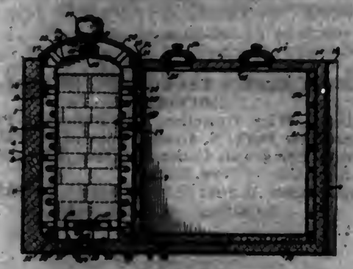
2,444,486
ICE-CREAM CUTTING AND DISCHARGING DEVICE
Henry A. Albelt, Milton, Mass.
Application May 3, 1945, Serial No. 591,679
8 Claims. (Cl. 107—48)

1. A cutter and dispenser for removing uniform predetermined units of ice cream or the like from a confined mass thereof comprising a loop of thin rigid narrow material symmetrically curved with respect to a diametrical axis of rotation of said loop, a handle connected to said loop at one end of said axis operable to swing the loop edgewise into the mass and then rotate the loop about said axis to sever a predetermined unit from the mass without compressing the material, and a narrow arcuate member perpendicular to and connecting opposite portions of said loop having the same radius of curvature as the connected portions of the loop operable when the loop is rotated about its axis to sever the predetermined unit from the



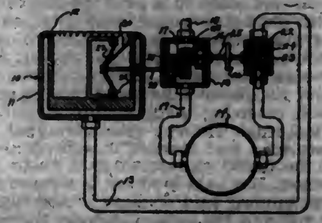
mass and to retain the severed unit within the loop during its removal from the mass and transportation therefrom.

2,444,487
BLOWPIPE NOZZLE
Peter R. Aronson, Pelham, N. Y., assignor to Union Carbide and Carbon Corporation, a corporation of New York
Original application November 29, 1939, Serial No. 306,596, now Patent No. 2,383,949, dated September 4, 1945. Divided and this application July 1, 1944, Serial No. 543,061
6 Claims. (Cl. 158—27.4)



1. An integral blowpipe nozzle having an annular discharge orifice, which nozzle comprises a one-piece body made from a single piece of ductile cold-worked metal, said body having formed therein a series of gas passages extending from the inlet end of said body to a point spaced inwardly from the discharge end thereof, said passages being disposed in an annular zone about the central longitudinal axis of said body; the discharge end of said nozzle body having formed therein an annular passage, the walls forming said annular passage having cold-worked, hardened smooth surfaces, said annular passage communicating with each of said gas passages and forming an annular discharge outlet for said gas passages.

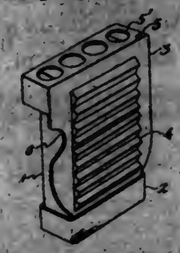
2,444,488
TOOTH PASTE AND BRUSH CASE
Bradley F. Aschemeier, Plant City, Fla.
Application October 26, 1945, Serial No. 624,854
1 Claim. (Cl. 132—84)



In a toilet cabinet, the combination, which comprises a rectangularly-shaped box-like cabinet having a vertically disposed cylindrical container at one side, said cylindrical container having a conically-shaped base with a threaded opening therein for receiving a threaded nipple at the end of a tube of tooth paste or the like, and an exteriorly threaded nipple extending therefrom concentric with the said threaded opening, a cap threaded on said exteriorly threaded nipple, said cylindrical container having a vertically extending slot in the outer surface thereof, a tube-collapsing roller positioned in said cylindrical container having an actuating knob extending through said slot, said box-like cabinet having depending hooks for tooth brushes and the like hanging from the inner surface of the upper end thereof, a removable horizontally disposed partition in said cabinet spaced from the lower end thereof, and an arcuate hinged door forming the outer surface of the box-like portion of said cabinet.

2,444,489
APPARATUS FOR FREEZING AND STORING FOODS
Chester A. Baker, Glen Ridge, N. J., assignor to Baker Ice Machine Company, Incorporated, Omaha, Nebr., a corporation
Application June 17, 1944, Serial No. 540,766
10 Claims. (Cl. 62—102)

1. In an apparatus of the character described, a quick freezer including an article container having an opening in the top and a perforated bottom, a refrigerating element surrounding said container intermediate said opening in the top and the perforated bottom, means for withdrawing air from the container through the top opening and discharging the air downwardly under substantial velocity into contact with the refrigerating element, and means for diverting the air for discharge into the container through the perforations of the container bottom.



2,444,490
SAFETY GAS BURNER
George B. Bellinger, Chicago, Ill.
Application January 5, 1945, Serial No. 571,415
7 Claims. (Cl. 158—117.1)

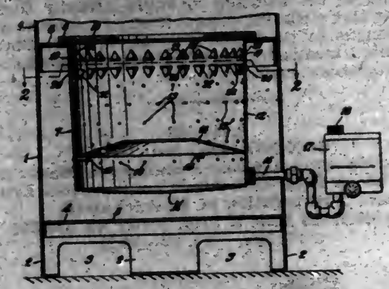
1. In a safety device for gas appliances, a burner, a gas reservoir for supplying a limited quantity of gas to the burner, a manually operable valve for controlling the flow of gas from the reservoir to the burner, a controlled valve for controlling the flow of gas from a main source of supply to the burner, automatic means for opening and closing the last mentioned controlled valve according to the temperature of the burner, and valve means for admitting the flow of gas from the main source of supply to the reservoir when the manually operable valve is in a closed position thereby shutting off the supply of gas from the reservoir to the burner.

2,444,491
CLOTHES WASHING IMPLEMENT
Clifton V. Berry, New Haven, Conn.
Application March 29, 1944, Serial No. 528,507
1 Claim. (Cl. 68—228)

A clothes washing implement comprising a plate approximating the area of a user's hand and adapted for resting the hand upon one face thereof, the opposite face of said plate being constituted as a ribbed wash-board, said hand resting face carrying a pocket at its end, said pocket having holes for therethrough protruding the user's fingers for grasping the implement, a receptacle for detergent and mending articles adapted to have its closed end portion fitting into said pocket, and a cover for said receptacle adapted to envelop the open end portion of said receptacle together with an end portion of said plate to lock said plate and receptacle to each other.

2,444,492
INFRARED RADIATION FILTER
Elkan R. Blout, Cambridge, and William F. Amon, Jr., Boston, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application May 2, 1945, Serial No. 591,574
12 Claims. (Cl. 88—109)

10. A laminated light filter comprising, in combination, a sheet of linear, synthetic polyamide which is swelled by alkaline solutions, said sheet having incorporated therewith a vat dye substantially totally absorbing visible red light but substantially transmitting infrared radiation and at least one other vat dye absorbing visible light in a region of the spectrum different from the region wherein said first-named dye absorbs, the absorption characteristics of said dyes being such that in combination they substantially uniformly absorb all visible light but substantially transmit infrared radiation, layers of glass, one on each side of said polyamide sheet, and adhesive securing said polyamide sheet and glass layers together and comprising a thermo-setting synthetic resin and a synthetic rubber selected from the group consisting of chloroprene polymers and butadiene acrylic nitrile copolymers.

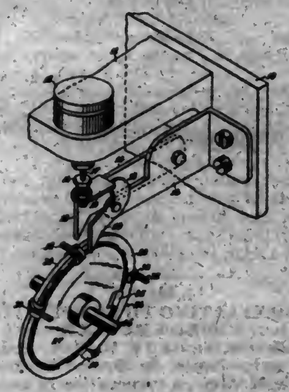


2,444,493
METHOD IN MAKING SHOES WITH A WEDGE HEEL AND STIFFENER
Ian Bostock, Stafford, England
Application May 9, 1945, Serial No. 592,753
In Great Britain May 4, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 4, 1964
1 Claim. (Cl. 12—142)

In the manufacture of articles of footwear such as boots and shoes, the method comprising the steps of preparing a blank incorporating an upper and heel cover in one unit, providing a last incorporating a wedge heel former integral therewith at the back part of said last, applying to said last said blank a lining and a counter extending below the wedge heel former and said blank, applying an insole to the bottom face of said last, lasting said blank over said insole and securing it thereto, applying an outsole thereto and securing it in place, removing said last and inserting a wedge

heel in the space provided by said heel wedge former, adhesively fastening said wedge heel to said insole and lining, applying and fastening a lining overlay to said wedge heel by adhesive, and cementing a sock over said insole heel and overlay.

2,444,494
HYDROXYLATING POT TYPE HYDROCARBON BURNER
James L. Breese, Santa Fé, N. Mex., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Application November 15, 1943, Serial No. 510,301
1 Claim. (Cl. 158—91)



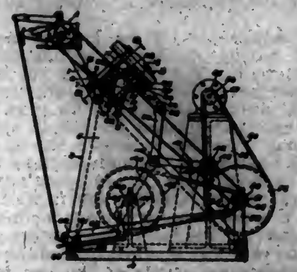
In a burner pot for pot type burners, a pot member having a generally cylindrical circumferential wall and a closed end, the other end of the pot being open, said circumferential wall having a plurality of primary air inlet apertures circumferentially spaced thereabout and located at various distances from the closed end, said pot wall having two circumferentially extending rows of secondary air inlets located adjacent the open end, the inlets of the row nearest the open end of the pot being inwardly inclined toward the closed end, the inlets of the other secondary row being inwardly inclined toward the open end, the corresponding inlets of the two rows being positioned and adapted to deliver impinging jets of air into the interior of the pot, and means for delivering a liquid fuel to the interior of the pot, each such secondary air inlet having aligned therewith a directing portion of the pot wall, offset inwardly from the side wall of the pot, the inner edges of said inwardly offset directing portions assisting in defining the inlets associated therewith.

2,444,495
TAPPET-ACTUATING MEMBER
Alvin Chase, Waterbury, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application April 13, 1946, Serial No. 662,082
13 Claims. (Cl. 74—568)

1. A cam member for actuating tappet mechanism, comprising a movable supporting element

having a portion of substantially uniform thickness surmounted by an expanded toroidal rim portion with flattened peripheral surface of cylindrical curvature; means slidably mounted over the expanded portion for adjustment along the

same, and having a tappet-engaging finger projecting in its adjusted location laterally therefrom; and clamping means to secure against displacement in its adjusted location said slidably mounted means to the expanded rim portion of the movable element.



2,444,496

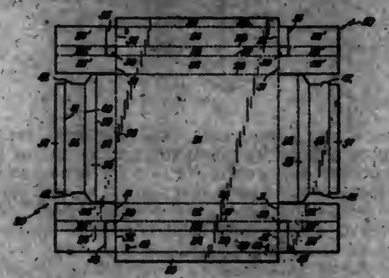
BOX SEALING MACHINE

Christian Christiansen, Swampscott, Mass., assignor to Rotary Machine Company, Inc., Lynn, Mass., a corporation of Massachusetts

Application June 1, 1944, Serial No. 538,235

5 Claims. (Cl. 93—36.3)

1. A device for sealing under high pressure the folded glued flaps of box blanks comprising, in combination, spaced pressure resisting members, a carriage reciprocally movable between the members, a rotary press mounted on the carriage, means for preventing the carriage from deviating from a rectilinear course between said spaced members, gears secured to the press, gear racks secured to one of the pressure resisting members, a platen mounted on one of said spaced members and guides on said platen for admitting the folded glued box blank to the platen with one side of the blank held flat against the pressure receiving surface of the platen, and means for reciprocally moving the carriage, said press having an arcuate surface with a diameter slightly greater than the pitch diameter of the gears, so that the gears rotate the press with a peripheral speed slightly greater than that needed to move it the amount otherwise required by the movement of the carriage, causing portions of the periphery of the press to exert an ironing effect on the flaps.



2,444,497

HOLLOW-WALLED CARTON STRUCTURE

John D. Clarke, Downers Grove, Ill., assignor to Morris Paper Mills, Chicago, Ill., a corporation of Illinois

Application September 11, 1944, Serial No. 553,510

6 Claims. (Cl. 229—34)

1. A box of the character described, comprising a bottom panel, a hollow side wall provided by panels forming inner and outer spaced apart wall sections connected by a top spacer section, all of said sections having extending portions providing a hollow partial end wall structure composed of inner and outer wall areas connected by a top spacer area having a substantially square aperture traversing the spacer section adjacent an end of said hollow side wall before said hollow end wall structure is swung into position and hinging said inner and outer wall areas and said top spacer area to said inner and outer wall sections of said hollow side wall thereby providing spacing means for an enveloping end wall structure, and a remaining hollow end wall structure provided by panels forming inner and outer wall sections and a top spacer section enveloping said inner and outer wall areas and top spacer area respectively.

2,444,498

GOGGLE WITH DETACHABLE LENS

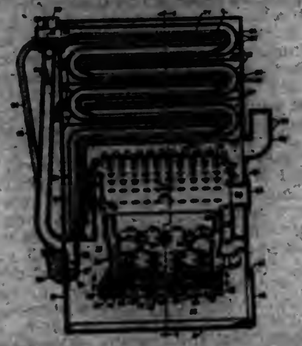
Clarence W. Cochran, Belmont, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Massachusetts

Application April 11, 1945, Serial No. 587,758

10 Claims. (Cl. 88—41)

5. An ophthalmic device comprising, in combination, a substantially rigid, curved bar element adapted to extend horizontally across the forehead of the wearer of said device, means providing a groove extending longitudinally of said bar for receiving a sheet of lens material, temple means pivotally secured to the ends of said bar for holding said device in position on said wearer, lens means comprising a sheet of transparent plastic material adapted to releasable engagement with

groove portions of said bar and shaped to provide a pair of eye portions having a nose recess therebetween, key means pivotally mounted at the ends of said bar for releasably locking said lens within said groove, means for releasably locking said key means in closed position, and means for releasably retaining a bridge comprising a nose pad in position within said nose recess.



2,444,499

HEAT-CONSERVING AIR-HEATING FURNACE WITH FLUE CLEANER

Fred H. Elliott, Big Rapids, Mich.

Application November 20, 1942, Serial No. 511,147

2 Claims. (Cl. 126—109)

1. In a furnace structure comprising a shell having a firebox in the lower portion thereof, a serpentine shaped flue extending upwardly from adjacent the firebox, an outlet at the top of the shell for said flue, said serpentine shaped flue line extending back and forth above the region of the firebox, said flue line and shell having an air chamber therebetween whereby air is heated by the hot products of combustion passing through said flue line, an elongated flexible element trained through the flue line, a conduit extending from the upper end of the flue line downwardly to a point below the lower end of the flue line and opening into the interior of the shell, said flexible element being endless and also trained through said conduit, means for imparting a longitudinal motion to said flexible element, and a flue cleaning brush connected to the flexible element said shell having openings at its upper and lower portions through which the flexible element is trained.

2,444,500

TRACK BRAKE FOR KILN CARS AND THE LIKE

Leonard D. Fergusen, Wallowa, Oreg.

Application January 13, 1947, Serial No. 721,733

3 Claims. (Cl. 188—41)

1. A track brake for a car traveling on a rail comprising a brake shoe adapted to be imposed on said rail to slide along the same in the rear of the car, means pivoted on top of said shoe for upward swinging movement and adapted to be swung upwardly against the bottom of said car to cause downward pressure to be exerted against said shoe, said means including a grooved member adapted to seat a part of said car therein to couple the shoe to said car to be slid along said rail thereby, and a handle bar connected to said means for downward swinging to swing said means upwardly.

2,444,501

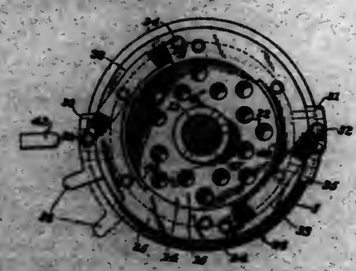
CLOSURE FASTENER

Albert T. Fisher, Hartford, Conn.

Application October 2, 1944, Serial No. 556,823

3 Claims. (Cl. 292—340)

1. A closure fastener of the class described, comprising a keeper element section including a base plate portion, an upstanding holding member having opposite leg portions arranged on said keeper section and adapted for engagement by a substantially arcuate swingable catch member on a separate but cooperative latch section, said upstanding holding member of the keeper section being formed with a substantially rectangular looped catch-receiving portion, the opposite leg portions of said holding member being seatingly inserted through slots provided therefor in the base plate portion of said keeper section and secured to the inner faces of the adjacent opposed side wall portions of the section.



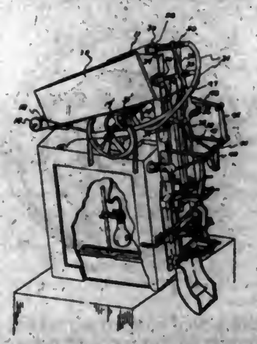
2,444,502

HEAD SPACING APPARATUS FOR CONTAINER CLOSING MACHINES

Walter C. Fremer, Philadelphia, Pa., assignor to Crown Can Company, Philadelphia, Pa., a corporation of Pennsylvania

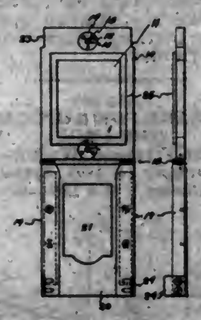
Application June 17, 1946, Serial No. 677,179

7 Claims. (Cl. 226—71)



1. In combination, supporting means for a filled and open-topped container, and means to engage the container contents to force them downwardly into the container and to rotate with respect to the container to cut off any contents which overhang the container edge.

2,444,503
REVERSE PLATING OF KNITTING FABRICS
James L. Getas, New York, N. Y.
Application October 12, 1945, Serial No. 621,866
11 Claims. (Cl. 66—14)



1. In a circular knitting machine, a lower cylinder, an upper cylinder axially opposed to said lower cylinder, grooves in the outer surfaces of said cylinders, independent needles in said grooves of said lower cylinder and said upper cylinder, plating elements associated with said needles, means for feeding a plurality of yarns to said needles in plating relation, means for drawing loops of said yarns by said needles in said lower cylinder, means for holding said yarns in desired plating relation in said loops by said plating elements while said loops of said yarn are drawn by said needles in said lower cylinder, means for drawing loops of said yarn by said needles in said upper cylinder, means for holding said yarns in desired plating relation in said loops by said plating elements while said loops of said yarn are drawn by said needles in said upper cylinder.

2,444,504
CARD FEEDING MECHANISM
Elmer H. Grogan, Danville, Ill.
Original application February 26, 1945, Serial No. 579,719. Divided and this application September 7, 1945, Serial No. 615,003
6 Claims. (Cl. 271—30)

2. A card feeding device comprising in combination a card magazine, a main drive shaft, a device for maintaining cards in pick up position in the magazine, card pick up means, both of the latter synchronously actuated by said drive shaft, said card maintaining device comprising a threaded shaft, speed reducing power transmission means operatively connecting said drive shaft and said threaded shaft, a card follower, threaded means attached to the follower engaging the threaded shaft whereby to advance said follower a distance equal to the thickness of one card for each revolution of the drive shaft, means whereby said threaded means may be adjusted to engage said threaded shaft at any point over its length; said card pick up comprising a bell crank attached to said main drive shaft, a link pivotally attached to the crank, a rocker arm attached pivotally to the link, a first rocker shaft fixedly attached to the arm, a cam fixed to the rocker shaft, a cam follower operatively engaging said cam, a second rocker shaft fixedly attached to said cam follower thereby to receive rocking motion, a pickup arm fixed to the second rocker shaft, a vacuum cup attached to said pick-up arm and spaced therefrom toward said magazine, said cup receiving reciprocating motion toward and away from the magazine when the pick-up arm rocks; means for mounting said follower in said magazine, a card removal opening at one end of said magazine, said opening being slightly smaller than a card to be held in said magazine, a hopper in front of said opening, said hopper opening into a duct into which said card is to be dropped, guides to lead said card into said duct, said vacuum cup mounted directly in front of said opening in position to contact a card therein at the forwardmost position, and to release such a card into the hopper in its position farthest from the opening, duct means connecting said cup with a source of vacuum, valve means in said duct controlled by the movement of said drive shaft to supply vacuum at the forwardmost position of the cup to pick up a card, and to release the vacuum at a position remote from the magazine to drop said card into the hopper.

2,444,505
CONTACT PRINTING FRAME FOR AUTOMATIC PRINTING MACHINES
Elmer H. Grogan, Danville, Ill.
Original application February 16, 1945, Serial No. 579,719. Divided and this application September 7, 1945, Serial No. 615,005
4 Claims. (Cl. 95—77)

1. A contact printing frame for photographic negatives for printing cards in an automatic photo-printing machine having a printing platen which automatically thrusts a sensitive card to be printed into contact with a negative and holds it there during exposure, said frame comprising a first hinged section and a second hinged section, the first hinged section having an aperture for positioning a negative, a transparent plate covering the aperture, the second hinged section formed in the shape of a channel, said channel forming with said first hinged section a slotted opening extending through said printing frame when said sections are closed, said slotted opening providing a passageway through which sensitized cards can freely pass, the sides of said channel further disposed to form guiding means for guiding said sensitized cards through said slotted opening, said channel shaped section forming the back of the frame and having an aperture therein corresponding to the aperture for the negative, and means holding said hinged sections firmly together when the frame is closed.

2,444,506
METHOD OF MAKING CONTAINER CLOSURES
Charles Hammer, Garden City, N. Y.
Application March 21, 1942, Serial No. 435,597
6 Claims. (Cl. 113—121)

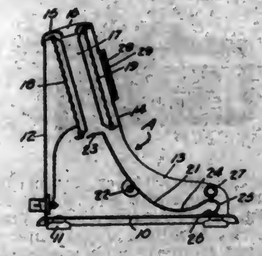
1. The method of making a closure cap capable of repeated reuse and having locking elements for rotatably securing the cap on to a container and a sealing band severable therefrom and adapted to be bent around the shoulder of a container, which consists in providing the cap with a skirt of sufficient length to receive the locking elements and also form an integral sealing band below said locking elements, forming said locking elements in the skirt, forming below said locking elements an outwardly extending double-walled integral flange, then severing the flange adjacent to its apex, and then reuniting the severed parts of the flange to form a severable joint weaker than the original joint of the unsevered parts and permit the cap to be separated from its sealing band on the rotation of the cap off the container without first fracturing or removing the sealing band.

2,444,507
METHOD OF MAKING PREDOPED FABRIC
Benjamin Raymond Hanson, Dayton, Ohio, assignor to The Sherwin-Williams Company, Cleveland, Ohio, a company of Ohio
No Drawing. Application April 15, 1944, Serial No. 531,293
2 Claims. (Cl. 117—47)

2. The process of preparing a dry, flexible, stretchable coated fabric for use on airplanes and other structures, which includes wetting cloth with an emulsion of water and a volatile liquid hydrocarbon, and applying to the so wetted cloth a water-insoluble coating composition containing a cellulose derivative, a plasticizer and a volatile solvent, said liquid hydrocarbon, water and solvent evaporating as a mixture, and the rate of evaporation of the solvent being more rapid than that of the mixture of liquid hydrocarbon and water.

2,444,508
ELECTRIC HEATER FOR FLOWING FLUID
Paul P. Horni, New York, N. Y.
Application October 29, 1945, Serial No. 625,204
14 Claims. (Cl. 219—40)

1. An electric fluid heater, comprising a container having a fluid inlet port and a fluid outlet port, a group of conducting plates spaced apart to form a series within said container with each plate insulated from the next adjacent plate in the series, means for connecting alternate plates to a conductor, means for connecting at least one of the other plates to another conductor of different polarity than that of the first mentioned conductor, a manually adjustable member for bringing one or more of the other plates into the circuit with said other conductor, at will in order to increase the active area in contact with the fluid flowing through the heater, flexible contact lugs upon said other plates disposed in the path of said manually adjustable member, said alternate plates connected to the first mentioned conductor being formed with cut out clearance portions preventing contact of said contact lugs with said alternate plates when the adjustable member flexes the lugs into mutual contact to introduce said plates having the lugs into the circuit, and means for supporting all of the plates in fixed position within said container.



2,444,509
COMPOSITION OF MATTER
Vladimir N. Ipatieff, Chicago, and Vladimir Haensel, Clarendon Hills, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Original application December 24, 1941, Serial No. 424,276, now Patent No. 2,386,957, October 16, 1945. Divided and this application March 28, 1945, Serial No. 585,239½
2 Claims. (Cl. 252—211.5)

1. A catalyst consisting essentially of a major proportion of alumina, from about 5% to about 15% by weight of zinc oxide and from about 5% to about 10% by weight of copper.

2,444,510
TOASTER
Siegfried Gordon Isserstedt, Toronto, Ontario, Canada
Application October 5, 1944, Serial No. 557,279
11 Claims. (Cl. 99—338)

1. A toaster comprising a framework open along one side adjacent to its base to form an accessible toast receiving cavity, a pocket above said receiver designed to contain the material to be toasted, said pocket being open at its top to receive said material and open at its bottom to discharge toasted material, said bottom opening being in communication with said cavity, electrical toasting elements in proximity to said pocket for toasting the material introduced thereto, a toast receiver swingably mounted on said framework and having a portion designed to form a base for the bottom opening of said toasting pocket when in a normal position,

said receiver being swingable to a position within said cavity to move said base member away from the bottom opening to said pocket, said receiver being disposed directly below the bottom open-

ing to said pocket, said material being dischargeable by gravity through the open bottom of said pocket into said receiver and being accessible for removal through the open side of said toaster.

2,444,511

TRAVELING BAG COMPRISING HINGEDLY CONNECTED OPPOSED SECTIONS

Ary Kaufmann, South Orange, N. J., assignor to K. Kaufmann & Co., Inc., Newark, N. J., a corporation of New Jersey

Application July 2, 1946, Serial No. 681,017

4 Claims. (Cl. 190—50)

1. A traveling bag the body of which is formed by opposed sections adapted to be closed together in meeting relation, a single sheet of pliable material divided medially by a rigid back-bone section to provide oppositely extending parts respectively including side and bottom portions of the respective body sections, a continuous top and end forming member of pliable material for each body section, said top and end forming members being respectively joined to the peripheries of the respective body section side portions to extend perpendicular thereto, said top and end forming members having facing means affixed by their longitudinal margins to the margins of said members, whereby to provide longitudinal pockets coextensive with the inner sides of said members, substantially rigid gusset means contained in and coextensive with said pockets, whereby to reenforce, shape and support said top and end forming members in extended condition, means to stiffen and reenforce said bottom portions, said bottom portions of the respective body sections being respectively hingedly related to said backbone section by intermediate freely flexible parts of said pliable sheet material from which said side and bottom portions are formed, said bottom portions being disposed perpendicular to the side portions, said top and end forming members having free terminal portions inturned, superimposed upon and secured to said stiffened and reenforced bottom portions, and means to releasably secure the body sections thus formed in closed together meeting relation.

2,444,512

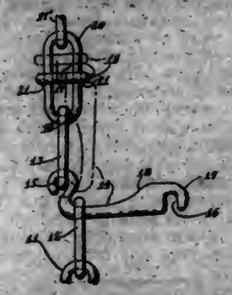
OPTICAL FILTER ATTACHMENT

Norman A. Kath, Davenport, Iowa

Application November 20, 1946, Serial No. 711,017

1 Claim. (Cl. 95—61.5)

An optical filter attachment comprising in combination, a plate adapted for removable mounting upon the objective and provided with a sight opening aligned with said objective, a pair of sleeves provided on said plate at the relatively opposite sides of said opening, a spool rotatably mounted in each of said sleeves, a knurled disc and an externally manipulatable control knob rotatable with each of said spools, a flexible strip windable on said spools, said strip comprising a row of differently colored filters and transparent adhesive tape for securing the same together, said filters being selectively registerable with said opening upon the rotation of said knobs, a pair of resilient fingers each frictionally engaging one of said discs, means for identifying said filters comprising a window in said plate and indicia on said flexible strip, and lining strips carried by said sleeves and plate on both sides of said flexible strip to prevent entrance of dust into said sleeves.



2,444,513

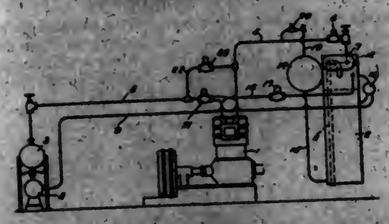
ANTISKID CHAIN SECURING DEVICE

Stefan Kesteiny, Chicago, Ill.

Application March 5, 1947, Serial No. 732,439

3 Claims. (Cl. 152—241)

1. In an anti-skid chain structure, latch means for releasably and tautly securing the said anti-skid chain structure about a pneumatic tire, the said latch means including, a latch element articulately secured to the terminal link of one portion of the said anti-skid chain structure, a cam portion on the top edge of the said latch means, a locking slotted portion below the said cam portion and located on the forward edge of the said latch means, a hump portion on the rear edge of the said latch means adapted to abut the said terminal link in locked position, a locking chain link mounted slidably and transversely on the chain link adjacent the said terminal link adapted to enter with one of its ends into the said locking slotted portion, and protuberant means on the edges of the said chain link adjacent the said terminal link to maintain the said locking chain link within cam actuating range of the said latch means.



2,444,514

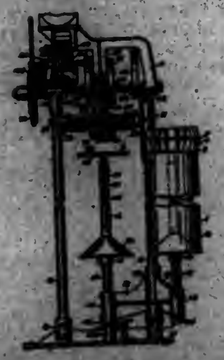
TUBE-ICE MACHINE USING COMPRESSOR TO REVERSE PRESSURE

Benjamin F. Kabaugh, Louisville, Ky., assignor to Henry Vogt Machine Co. Inc., Louisville, Ky., a corporation of Kentucky

Application January 28, 1944, Serial No. 520,085

9 Claims. (Cl. 62—3)

1. In a system for freezing ice, a condenser, an evaporator, a vessel in said evaporator in which ice is frozen and from the surface of which it is thawed following freezing by replacement of liquid refrigerant in said evaporator by hot gaseous refrigerant under pressure, a displacement vessel connected to said evaporator into which the liquid refrigerant is evacuated, a compressor, conduits between said compressor and said condenser and evaporator, a conduit between said displacement vessel and the suction side of said compressor, valve means controlling said conduits, means for periodically operating said valve means to cause said compressor alternately to pump from said evaporator to said condenser and from said condenser to said evaporator, defining successive freezing and evacuation phases, and to open said displacement chamber conduit to the suction side of the compressor at the beginning of the evacuation phase and close it at the beginning of the freezing phase.



2,444,515

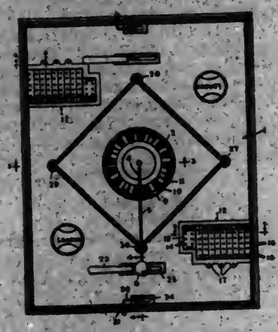
CARTON ASSEMBLING MACHINE

Leon E. Le Rembard, Nashua, N. H., assignor to The International Paper Box Machine Company, Nashua, N. H., a corporation of New Hampshire

Application December 23, 1944, Serial No. 569,530

24 Claims. (Cl. 93—55.1)

1. A machine for assembling containers of the class described which comprises means for supporting the tubular body of the container in open position, means for supporting the locking ring and the closure member at the base of the body extensions, means for spacing the closure member from the locking ring, means for folding the body extensions around the locking ring, and means for causing the closure member to clamp the end portions of said extensions against the locking ring.



2,444,516

APPARATUS FOR PLAYING BASEBALL GAME

Clinton Lenbom, Chetek, Wis.

Application August 19, 1947, Serial No. 769,336

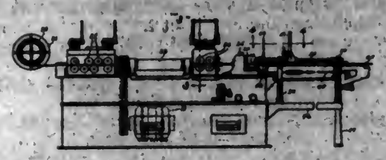
2 Claims. (Cl. 272—90)

1. In an apparatus of the class described, the combination of a gameboard, said gameboard provided near each end with two transversely-extending elongated apertures, a pair of bat devices within the marginal edges of said gameboard, each bat device provided with a rocker section under said gameboard, said rocker section provided at its inner end with an upwardly-extending auxiliary section projecting through one of said transversely-extending elongated apertures, a bat on said auxiliary section above said gameboard, said rocker section provided at its outer end with an upstanding primary section projecting through one of said transversely-extending elongated apertures, said primary section provided with an outwardly-extending horizontal section, said gameboard provided between said sets of transversely-extending elongated apertures with a diamond, a ball and pointer device pivotally mounted on said gameboard at the center of said diamond, and the ball of said ball and pointer device adapted to be placed in position to be struck by said bat to rotate said ball and pointer device.

2,444,517

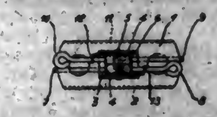
PLAYING PIECE

Paul Levy, New York, N. Y.



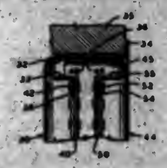
Application April 2, 1946, Serial No. 659,067

6 Claims. (Cl. 273—137)



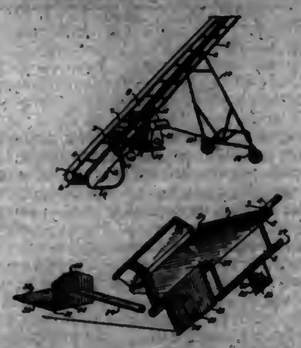
4. A game element comprising two cup shaped parts telescopically displaceable and spaced apart by a spring, and a spring actuated locking device arranged between said parts to be operated by handles passing through slots provided in the walls of said cup shaped parts.

2,444,518
PULL-OUT DEVICE
Marvin W. Lewis, Cleveland Heights, Ohio
Application January 11, 1946, Serial No. 640,474
9 Claims. (Cl. 140—140)



1. In a straighten-and-cut machine having a zone where a straightened length of rod is run out and cut to length, means for driving the rod, a vise adapted to be clamped on said rod and carried therewith in said zone, said clamping of said vise to said rod providing the sole driving means for said vise, and means preventing rotation of said vise in a plane transversely of said rod.

2,444,519
HAIR CLIP
Åke Linder, Stockholm, Sweden
Application August 27, 1946, Serial No. 693,285
In Sweden September 8, 1945
2 Claims. (Cl. 132—46)

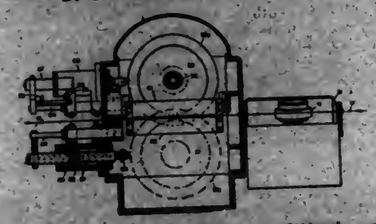


1. A hair clip consisting of a plate provided with an aperture, said plate having mounted thereon two double-armed spring-actuated levers thrust through said aperture, the one arms of which levers form clamping shanks cooperating with the plate, while the other arms thereof form handles for the manipulation of the clip.

2,444,520
FRAME MOUNTING MEANS FOR FLEXIBLE SHEETLIKE MATERIALS
Harold A. Marsh, Brookline, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware.
Application April 26, 1946, Serial No. 665,275
7 Claims. (Cl. 88—65)

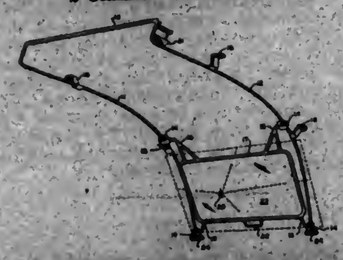
5. In combination, a frame comprising a unitary structure having a substantially symmetrical cylindrical stiffening member, a substantially symmetrical cylindrical support member located inside of and concentrically spaced from said stiffening member, an annular resilient deformable member joining one edge of said stiffening member to one edge of said support member and adapted to be deflected upon the application of a predetermined stress to the second edge of said support member; and a sheet of material fastened to said second edge of said support member, said material being subject to rupture when subjected to a stress greater than said predetermined stress, the plane of said sheet material being substantially perpendicular to the axes of said cylindrical stiffening and support members.

2,444,521
ENGINE MOUNTING FOR ADJUSTABLE CONVEYERS
Stanley A. Mulkey, Lee's Summit, and Ralph Furlong, Kansas City, Mo., assignors to Sam Mulkey Company, Kansas City, Mo., a partnership
Application May 27, 1946, Serial No. 672,661
5 Claims. (Cl. 198—121)



5. In an elevator, a boom having a support for one end, means for elevating the other end of said boom whereby said boom is moved to any desired inclination, a conveyor operating on said boom, downwardly extending brackets on said boom having bearing openings therein, one of said brackets having a plurality of apertures spaced from the bearing opening therein, a tubular shaft rotatably mounted in said bearing openings, an angle plate secured to one end of said tubular shaft, a prime mover mounted on said angle plate having the drive shaft thereof in axial alignment with the tubular shaft, means for extending through selected apertures for securing the angle plate in selected angular relation with the boom, and means operated by the prime mover for driving the conveyor.

2,444,522
BALLAST UNIT FOR FLUORESCENT LAMP LIGHTING APPARATUS
Max Nathanson, Montreal, Quebec, Canada
Application June 15, 1946, Serial No. 676,892
1 Claim. (Cl. 175—357)

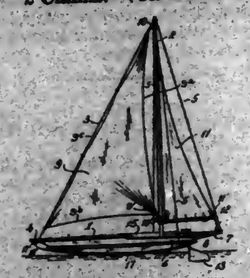


In a ballast unit for luminescent lamp lighting systems, a transformer assembly, a casing housing said assembly, an end wall of the casing having an opening therein, a condenser detachably carried by the end wall of the casing and having one end mounted in said opening and the remainder of the condenser extending exteriorly of the casing, and a fuse carried in the casing between the transformer and the condenser and accessible through the end wall of the casing upon detachment of the condenser.

2,444,523
APPARATUS FOR SURFACE CONDITIONING WIRES AND THE LIKE
Norman H. Nye, Cuyahoga Falls, and Walter E. Rogers, Stow, Ohio, assignors to The Vaughn Machinery Company, Cuyahoga Falls, Ohio, a corporation of Ohio
Application April 19, 1944, Serial No. 531,722
10 Claims. (Cl. 51—112)

10. In apparatus for surface conditioning wire and the like, means adapted continuously to advance such wire longitudinally and simultaneously oscillate the same about its axis, means including rotatable grinding wheels having faces respectively adapted to contact opposite sides of such advancing and oscillating wire as it passes therebetween for performing the major reduction of the diameter of said wire in the first half of its passage between said faces and further reducing said wire to a lesser degree in the second half of its passage between said faces, said wheels being rotatable about axes disposed transversely of such wire and having the work-contacting portions of their faces bevelled, guide means arranged to direct such wire between said wheels along a chordal line adjacent the peripheries thereof, such axes of said wheels being relatively inclined to bring more closely together the bevelled faces of said wheels along the second half of such chordal line and to present converging grinding surfaces adapted to move predominately longitudinally of such wire along the first half of such chordal line.

2,444,524
VISOR
Maxfield Parrish, Jr., Lexington, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application August 6, 1946, Serial No. 688,643
2 Claims. (Cl. 296—97)



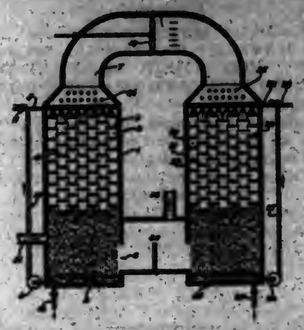
1. In combination with an antiglare visor for use in automotive vehicles, a pair of resilient, rodlike guide rails positioned in spaced, parallel relationship within the body of said vehicle, each said rail extending from a point adjacent the lower edge of the windshield of the vehicle to a point adjacent the roof of the vehicle and above the driver's head, means mounting each said rail in spaced relation to the roof and windshield of the vehicle, guide lugs on said visor frictionally slidable upon said rails, said lugs cooperating with said rails to permit movement of said visor along said rails from a position closely adjacent the windshield of said vehicle to a position adjacent the roof of the vehicle and above the driver's head, said guide lugs engaging said resilient rails with such frictional contact as to hold said visor firmly in position upon said rails during operation of said vehicle.

2,444,525
ACETALS AND MERCAPTALS OF ALDEHYDES HAVING TWO VICINAL MERCAPTO GROUPS AND THEIR SELF-CONDENSATION POLYMERS AND PROCESS FOR PREPARING SAME
Albert A. Pavlic, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 7, 1945, Serial No. 633,535
18 Claims. (Cl. 260—609)

1. Alpha,beta - dimercaptopropionaldehyde diethyl acetal of the formula

$$HS-CH_2-\underset{\displaystyle SH}{\underset{|}{CH}}-CH(OC_2H_5)_2$$

2,444,526
SAILBOAT
William D. Pawley, Jr., Miami Beach, Fla.
Application October 12, 1944, Serial No. 558,434
2 Claims. (Cl. 114—39)

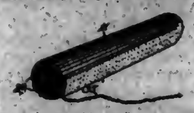


2. In a boat, a hull having a shallow draught and wide beam and a speedboat type bottom, a mast mounted upon the hull at the rear of amidship and nearer the stern than the amidship, a diagonal forestay secured to the mast near its top and to the bow of the hull, a mainsail having a leading diagonal edge secured to the forestay and a trailing edge and a lower foot which is free and flexible, the trailing edge and foot being disposed at substantially right angles with relation to each other, and means connected with the mainsail near its lower rear corner so that the mainsail may be trimmed out.

2,444,527
METHOD FOR RECOVERING ORGANIC ACIDS FROM SOUR SEWAGE SLUDGE
Richard D. Pomeroy, Altadena, Calif.
Application November 30, 1943, Serial No. 512,392
3 Claims. (Cl. 260—412.5)

1. The process of steam distillation for recovering a volatile fatty acid from non-volatile material containing said volatile fatty acid, which comprises: introducing said material into a vaporizing space; introducing steam into said vaporizing space into contact with said material; maintaining temperature and pressure conditions

in said space causing vaporization of said fatty acid into said steam to produce a mixture of said steam and vapors of said volatile fatty acid; removing said mixture from said space and introducing the same into a reaction space; maintaining temperature and pressure conditions in said reaction space preventing substantial condensation of said steam therein; contacting said mixture in said reaction space with an aqueous solution of an alkali reacting with the vapors of said



fatty acid to produce a compound which is nonvolatile under the temperature and pressure conditions in said reaction space; separating said compound from said steam; returning said steam without substantial condensation to said vaporizing space and supplying sufficient heat to said steam in its circulation through said apparatus to prevent any substantial condensation of the steam in any portion of the process.

2,444,528

INTRAVAGINAL PACK AND ITS MANUFACTURE

Otto Popper and Gordon Kestell Meivill, Johannesburg, Transvaal, Union of South Africa; said Meivill assignor to said Popper

Application July 11, 1944, Serial No. 544,434
In the Union of South Africa July 30, 1943
2 Claims. (Cl. 128—285)

1. The method of making a vaginal pack from a materially rectangular sheet of compressible absorbent material, which consists in forming the sheet into a series of parallel corrugations and compressing said corrugations transversely to the length of their ridges and thereby converting them into pleats and compressing the pleated article to coherent rod form.

2,444,529

ELECTRICAL SWITCH

Louis M. Puster, Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware

Application April 4, 1947, Serial No. 739,428
7 Claims. (Cl. 200—67)

1. In a snap action electrical switch, in combination with a housing providing a switch chamber, a leaf spring in said chamber, means mounting said leaf spring at its ends, opposed fulcrum members engaging said leaf spring approximately midway of its length, the length of said spring being greater than the distance between said mounting means whereby with the cooperation of said fulcrum members said spring is bowed in opposite directions on opposite sides of said fulcrum members, at least one movable contact element mounted approximately midway of one of said bowed spring sections, at least one stationary contact element carried by said housing for

cooperation with said movable contact element, and means cooperating with the other of said bowed spring sections approximately midway of its length for reversing the direction of curvature of said last named section and thereby the direction of curvature of said first named section to move said contact elements with respect to each other.

2,444,530

TORQUE RESPONSIVE CLUTCH FOR CONTROLLING SHIFTING OF GEAR RATIOS OF TRANSMISSIONS

Carroll H. Richards, Boston, Mass.

Application March 9, 1943, Serial No. 478,494
9 Claims. (Cl. 192—31)

1. In a device having driving and driven elements, means for affecting a driving connection between said elements including a movable member and connections adapted to transmit to said member forces representative of the torques of said driving and driven elements, and mechanism responsive to relative movement of said driving and driven elements for controlling said means, the improvement in which said movable member is loosely splined on said driven element for limited rotational movement relative thereto and in which said connections include a spring operatively associated with said driven element and said movable member and adapted to effect a driving connection therebetween.

2,444,531

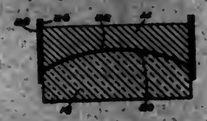
CHUCK

John H. Richardson, Needham, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application January 5, 1946, Serial No. 639,206
2 Claims. (Cl. 51—235)

1. In apparatus of the class described, vacuum chuck means comprising a pair of oppositely disposed cup-shaped members engaging opposite surfaces of a work piece, each of said members making substantially line contact with the surface of said work piece, and means for partially

evacuating the spaces within said cup-shaped members whereby said members and work piece



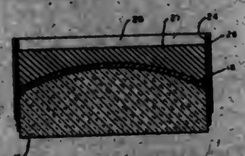
are held against relative movement by the pressure of the surrounding atmosphere.

2,444,532

METHOD OF MANUFACTURING REFLECTING OPTICAL ELEMENTS

John H. Richardson, Needham, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application March 7, 1946, Serial No. 652,831
11 Claims. (Cl. 18—59)



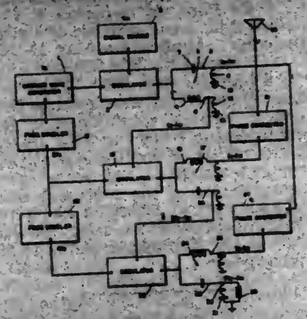
1. An improved method of manufacturing reflecting optical elements which comprises providing a mold member having an optically finished molding surface, coating said optically finished molding surface with a liquid partial polymer of a polymerizable material, advancing the polymerization of the exposed surface of said liquid partial polymer coating to form a thin flexible polymerized skin while retaining the remainder of the partial polymer in liquid condition, applying a porous backing to said polymerized skin, said porous backing being a material chemically inert to and incapable of dissolving said polymerized skin but which will adhere thereto, and completing the polymerization of said liquid partial polymer coating to cause the polymerized coating to be bonded to said backing.

2,444,533

METHOD OF MANUFACTURING REFLECTING OPTICAL ELEMENTS

John H. Richardson, Needham, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application March 7, 1946, Serial No. 652,832
5 Claims. (Cl. 18—59)



1. An improved method of manufacturing reflecting optical elements which comprises providing a mold member having an optically finished molding surface, forming a solid resin layer on said optically finished surface, treating the exposed surface of said layer to render it tacky, applying a thin layer of a powdered mineral cementitious material adapted to be activated by water to said tacky surface, causing said tacky surface to harden to bond said mineral cementitious material to the exposed surface of said resin layer, casting a water slurry of a mineral cementitious material on said resin layer and said powdered mineral cementitious material to form a base member and to bond said powdered material to said base member and thus bond said resin layer to said base, and removing the thus formed element from said molding surface as a unitary mass.

2,444,534

SINGLE SIDE-BAND MODULATION SYSTEM

Hans W. G. Salinger, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana

Application February 1, 1946, Serial No. 644,871
12 Claims. (Cl. 179—171.5)

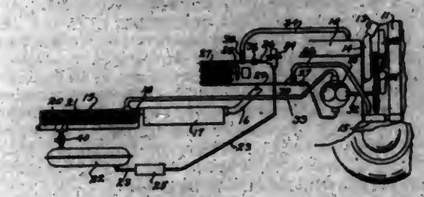
4. A single sideband modulation system comprising means for developing a signal, means for developing a carrier wave of frequency f, means for modulating said carrier wave of frequency f in accordance with said signal to develop a modulated carrier wave of frequency f having an upper and a lower sideband, said upper sideband being the desired sideband, means for developing a carrier wave of frequency $2f$, means for modulating said carrier wave of frequency $2f$ in accordance with said lower sideband, thereby to develop a modulated carrier wave of frequency $2f$ having two sidebands, the lower one of said sidebands being substantially identical in frequency with said upper desired sideband, and means for adding said identical sidebands in phase.

2,444,535

COLLAPSIBLE GARMENT FRAME

Sigmund Samuel, Baltimore, Md.

Application September 19, 1946, Serial No. 697,967
2 Claims. (Cl. 223—63)



2. In a collapsible garment frame having side frames interconnected at their opposite ends for adjustment toward and from each other, said side frames being medially divided to provide opposite frame sections including adjacent frame ends, joint means for permitting said side frames to be folded toward each other and also to be held in rigid rectilinear relation, said means comprising a clamp of U-shaped cross section rigidly

secured to each of the related ends of the same section and having a portion thereof extending beyond the end of the frame section to which it is attached with its open side directed outwardly to receive the related ends of the opposite section, said last-mentioned portion having an opening, a stud carried by the related ends of each frame section opposite that having the clamp secured thereto, said stud projecting through said opening, and a member cooperating with each stud for drawing the clamp rigidly to the ends of the frame section carrying the stud.

2,444,536
SYNTHESIS OF N-ARYL-MALEIMIDES
Norman Edward Searle, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 14, 1946, Serial No. 669,589
2 Claims. (Cl. 260—313)

1. Process which comprises treating N-phenylmaleamic acid with a stoichiometric excess of acetic anhydride and from 1 to 20%, by weight of the acetic anhydride, of sodium acetate at a temperature of at least 60° C. but below the decomposition temperature of the reactants and of the maleimide formed and isolating N-phenylmaleimide by mixing the reaction mixture with water and separating the N-phenylmaleimide from the aqueous menstruum.

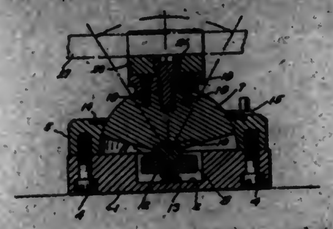
2,444,537
AUTOMOTIVE AIR CONDITIONING APPARATUS
George E. Seldon, Kirkwood, Mo.
Application June 2, 1944, Serial No. 538,481
4 Claims. (Cl. 62—117)

1. In combination with an internal combustion engine, air conditioning apparatus comprising a high capacity compressor arranged for operation by the engine, an evaporator coil connected to the suction side of said compressor, an expansion valve connected to the inlet of said evaporator, a condenser connected to the pressure side of said compressor, a tube for draining condensed moisture from the exhaust of the engine, a water tank connected to said condenser and said tube for collecting moisture therefrom, and a connection between said tank and said expansion valve to complete the refrigerating circuit.

2,444,538
PROCESS FOR THE PRODUCTION OF BUTADIENE AND CATALYST THEREFOR
George W. Seymour and Fred Fortess, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application August 19, 1943, Serial No. 499,230
7 Claims. (Cl. 260—681)

1. Process for the production of butadiene by the catalytic vapor phase dehydration of 1:3-butane-diol, which comprises passing the vapors of 1:3-butane-diol over a catalyst consisting essentially of a mixture of primary sodium phosphate and secondary calcium phosphate in substantially equimolecular proportions, free phosphoric acid and primary N-butylamine phosphate, at a temperature of 280 to 300° C., and separating butadiene from the products formed.

2,444,539
PROPELLER MOUNTING
Roy E. Sharpes, Harrisonburg, Va.
Application May 11, 1943, Serial No. 486,587
5 Claims. (Cl. 170—173)



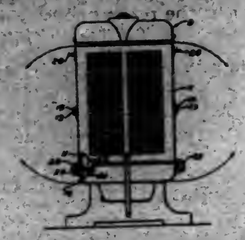
1. Propeller construction comprising a blade, a socket member for securing the root end of said blade, said socket member having a lateral opening on the leading side for the lateral introduction of the blade, and a cap for closing said opening engageable with said root end, the chamber of said socket member being wedge-shaped toward the trailing edge, the root end of said blade being shaped to fit said socket chamber, and bolts passing through said cap, blade and socket member for drawing said cap compressively against said blade and wedging the latter in said socket member.

2,444,540
PORTABLE LIGHT
Joseph F. Stecck and Anthony J. Valrose, Chicago, Ill.
Application September 28, 1944, Serial No. 555,801
2 Claims. (Cl. 240—53)

1. In a portable light device, a lamp casing provided with two supporting lugs and a foot element oppositely disposed to the said supporting lugs, and angular positioning means comprising, a U-shaped wire element provided with trunnions articulately secured to the said supporting lugs, a V-shaped wire element of smaller dimension than the said U-shaped element and having its free ends articulately secured to the base of the said U-shaped wire element, and a rod supporting element of smaller dimension than the said V-shaped element articulately secured to the crotch portion of the said V-shaped wire element, the said rod supporting element being provided with a notched formation at its free end adapted to retain releasably the said foot element.

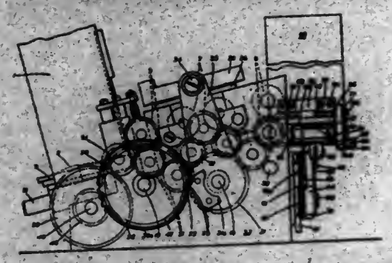
2,444,541
UNIVERSAL SUPPORT FOR ARTICLE HOLDERS
Elwin M. Strickland, Detroit, Mich.
Application June 20, 1945, Serial No. 600,543
1 Claim. (Cl. 248—181)

A universal support comprising a substantially flat base having a channel in its upper face, the bottom of said channel including a raised end portion forming a fulcrum, a lever operable in the channel and having one end resting on the fulcrum, a socket in the lever adjacent the fulcrum, a bearing ball mounted in the socket, a ball segment rotatably and rockably adjustable on the bearing ball, a socket on the base partially enclosing said ball segment, a coil spring beneath the lever for yieldingly urging the ball segment into frictional engagement with the socket, a screw rptatably mounted in the socket and threadedly connected to the end of the lever remote from the fulcrum for raising said lever positively to clamp the ball segment in adjusted position in the socket, and said ball segment being adapted to support an article holder.



2,444,542
LOCKING AND UNLOCKING MECHANISM FOR CYLINDER LOCKS
Gunnar E. Swanson, New Britain, Conn.
Application November 1, 1945, Serial No. 626,011
27 Claims. (Cl. 70—360)

1. A cylinder lock comprising a casing having recesses in its inner wall, a cylinder with a key slot fitted to move rotatably and longitudinally in the casing, the said cylinder having an interior recess open at one side, tumblers carried by the cylinder and adapted to be projected into and withdrawn from said wall recesses, and a spring positioned in the cylinder recess and tensioned to move the cylinder rotatably and longitudinally.

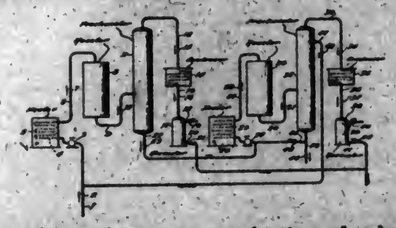


2,444,543
LATCHING DOOR FOR ENCLOSURES
William E. Swenson, St. Paul, Minn., assignor to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a corporation of Delaware
Application April 6, 1946, Serial No. 660,268
5 Claims. (Cl. 220—32)

2. A door structure for closing the side opening of an enclosure comprising, upper and lower doors adapted to close upper and lower parts of said opening, the said doors being hinged respectively at their lower and upper edges whereby the doors may be opened one at a time and the upper door may be swung down against the

lower door to open the upper part of the opening or the lower door swung upward against the upper door to open the lower part of the opening, and latch means for holding the doors closed and operative to hold either door against the other when one of the doors is opened.

2,444,544
MECHANISM FOR FEEDING STATISTICAL RECORD CARDS AND DELIVERING THEM TO A RECEIVER
Arthur Thomas, Wallington, England, assignor to Powers Accounting Machines Limited, London, England, a British company
Application December 15, 1944, Serial No. 568,336
In Great Britain December 21, 1943
12 Claims. (Cl. 271—3)



8. Mechanism for delivering record cards to a receiver from a machine which has operated on the cards, comprising, in combination, means for ejecting the cards seriatim from the machine, carrier means for receiving the ejected cards including a support pivoted at one end and having its free end disposed in said receiver and a platform slidable longitudinally of said support, means including a yieldable rest within the receiver for having deposited thereon from the platform one card after another to build up a stack of cards within the receiver, and means operative in timed relation with the card ejecting means to guidingly move the platform, between successive operations of the card ejecting means, first through a substantially rectilinear path extending in one direction for moving the card away from the ejecting means and next through a path in another direction to lift the card past said rest for deposit in the receiver below a card or cards previously deposited in the receiver and next through a path back to the ejecting means for receipt of another card from the ejecting means.

2,444,545

CATALYTIC CRACKING OF HYDROCARBONS

Charles L. Thomas, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application February 18, 1944, Serial No. 522,855
6 Claims. (Cl. 196—49)

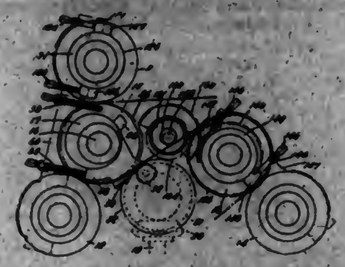
1. A process for the production of substantially saturated gasoline which comprises introducing a hydrocarbon oil into a primary cracking zone and therein contacting said oil with a cracking catalyst at a cracking and dealkylating temperature below about 900° F., correlating the charge rate of said hydrocarbon oil to said primary cracking zone and the ratio of catalyst to oil in said zone with said cracking temperature to effect a conversion of said hydrocarbon oil of not more than 60% and to produce a substantially saturated gasoline, separating from the resultant products said substantially saturated gasoline and a higher boiling insufficiently converted hydrocarbon oil, introducing the latter into a secondary cracking zone and therein contacting said insufficiently converted hydrocarbon oil with a cracking catalyst at a cracking temperature above about 900° F., correlating the charge rate of hydrocarbon oil to said secondary cracking zone and the ratio of catalyst to oil therein with said last named cracking temperature to effect a conversion of said insufficiently converted hydrocarbon oil of at least 60% and to produce a substantially saturated gasoline, separating from the reaction products of said secondary cracking zone said last named gasoline and a polyalkylaromatic fraction boiling within the range of from about 300° F. to about 450° F., and recycling said polyalkylaromatic fraction to said primary cracking zone to selectively dealkylate the same at said dealkylating temperature.

2,444,546

VULCANIZATION OF CHLOROPRENE ELASTOMERS IN THE PRESENCE OF DINITROSOBENZENE AND CATECHOL

Robert Henry Walsh, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application April 24, 1945, Serial No. 590,117
4 Claims. (Cl. 260—92.7)



1. The improvement in the process of vulcanizing froth sponge prepared from an elastomer of the class consisting of polychloroprene and copolymers of chloroprene with copolymerizable unsaturated compounds containing the vinylidene radical which contain at least 50% polychloroprene, which comprises incorporating into the froth prior to vulcanization from 1% to 25%, based on the weight of the elastomer, of an oxide of the class consisting of zinc oxide and lead oxide, from 0.1% to 3% of catechol and from 0.1% to 4% of a dinitrosobenzene of the class consisting of meta- and para-dinitrosobenzene, based on the weight of the elastomer, and subjecting the froth to vulcanizing conditions.

2,444,547

PRINTING MACHINE

William Arnold Whitehead, Fulwood, Preston, England, assignor to The Gem Printing Press Company, Chicago, Ill., a corporation of Illinois

Application November 21, 1944, Serial No. 564,444
In Great Britain September 14, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 14, 1963
6 Claims. (Cl. 101—221)

1. A late news or like printing mechanism comprising an impression cylinder, a pair of type cylinders operatively disposed relative to said impression cylinder, means for moving the impression cylinder into impression engagement with one or the other of said type cylinders, and means supporting one of said type cylinders for movement towards and away from the impression cylinder.

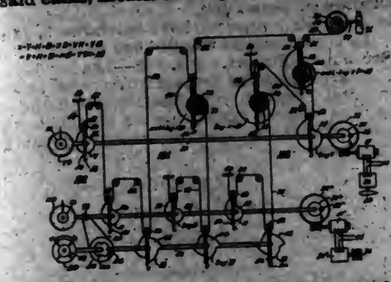
2,444,548

NECKTIE ACCESSORY

Carl E. Wiebe, Wichita, Kans.

Application February 28, 1946, Serial No. 650,781
1 Claim. (Cl. 2—157)

A tie-extending and knot-retaining device, consisting of a single length of resilient steel wire approximately four inches in length, and a metal band; said wire being formed into a cuneiform loop at the center thereof, said loop doubling said wire into an elongated straight shank; said shank separating into two legs extended in inverted Y fashion from said shank, said legs terminating in prongs, humps in said legs adjacent to said prongs, said prongs and humps being adapted to engage and retain fabric material; said metal band clasping said shank immediately above said legs; and a spur integrally formed upon said band and projecting therefrom to anchor the lower end of said shank to a tie whereby a curved shape is imparted to the upper fold of said tie.



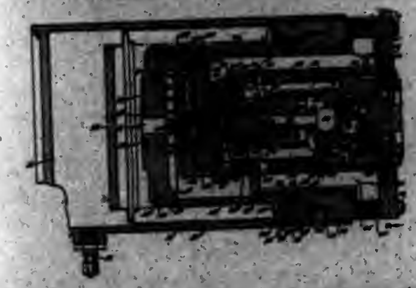
2,444,549

POLYNOMIAL EQUATION COMPUTER

John M. Anderson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application October 28, 1944, Serial No. 560,502
5 Claims. (Cl. 235—61)

1. In a computer, a pair of rotatable shafts, a summation cord, and means adjusting the effective length of said cord to a value determined by the sum of variable quantities which are functions of the rotations of said shafts and the product of said quantities; said means comprising linear and logarithmic cams driven by each said shaft, a pivoted antilogarithmic cam, followers for said cams, means driving said antilogarithmic



cam in accordance with the movements of the followers of said logarithmic cams, and means engaging said cord to alter its effective length and movable with the followers of said linear and antilogarithmic cams.

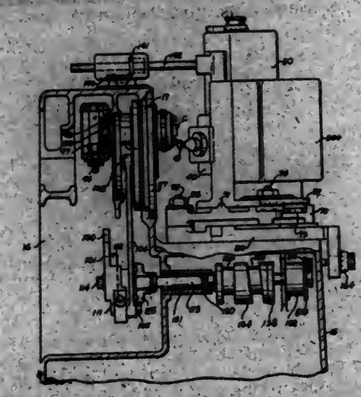
2,444,550

HYDRAULIC POWER PACK UNIT

Benjamin N. Ashton, Kingston, N. Y., assignor to Electrol Incorporated, Kingston, N. Y., a corporation of Delaware

Application May 20, 1944, Serial No. 536,492
8 Claims. (Cl. 103—223)

1. A hydraulic power supply unit, comprising a pair of telescopically related cylindrical casings joined at one end and otherwise spaced apart to provide a pressure chamber, an expansible metallic bellows interposed between said casings forming with the inner casing an accumulator chamber for receiving liquid under pressure, a pump mounted within said inner casing and having an inlet and a discharge outlet for high pressure liquid, and by-pass means connecting said outlet to said accumulator chamber to supply liquid to the latter to expand said bellows and accumulate a reserve supply of liquid under pressure.



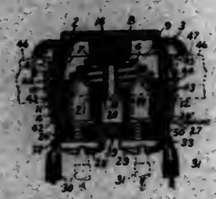
2,444,551

GEAR-CUTTING MACHINE

Oliver F. Bauer, East Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York

Application November 9, 1944, Serial No. 562,608
12 Claims. (Cl. 90—5)

1. In a machine for generating gears, a frame, a cradle oscillatably mounted on the frame, a work support reciprocably mounted on the frame, a face mill cutter journaled in the cradle, a work spindle journaled in the work support, means for rotating the cutter, means for rotating the work spindle continuously at a uniform velocity, means driven in time with the last named means for oscillating the cradle to impart thereto alternate generating and return movements, means for reciprocating the work support to move the work



into and out of engagement with the cutter and so operated that the work is in engagement with the cutter during the generating movements of the cradle and is out of engagement with the cutter during the return movements of the cradle.

2,444,552

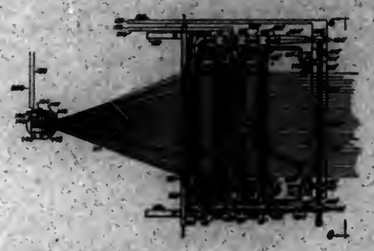
PUSH BUTTON

Sigurd Brantingson, Maplewood, N. J., assignor of one-half to Bruno Martinuzzi, New York, N. Y.

Application October 9, 1945, Serial No. 621,823
4 Claims. (Cl. 200—159)

1. In a push button switch or the like, having a pressable button operator and a body guiding the movement of the operator, a conical spring and a plurality of conical contacts connected by said spring when said operator is pressed, said conical contacts engaging the coils of said conical spring whereby the latter is adapted to slide on said conical contacts to wipe the contacting parts and to cause several coils of the conical spring to engage said contacts in sequence one after the other.

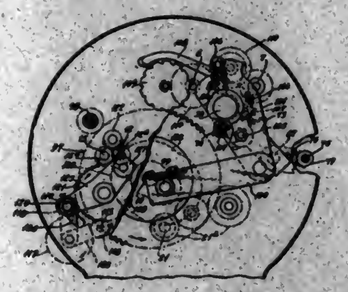
2,444,553



SINGEING APPARATUS AND METHOD

Richard E. Cone, Gastonia, N. C., assignor to Threads, Incorporated, Gastonia, N. C., a corporation of North Carolina

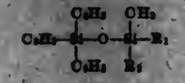
Application July 1, 1946, Serial No. 680,599
12 Claims. (Cl. 28—63)



1. In a singeing machine through which a plurality of strands of yarn in sheet form are passed for singeing, comprising two singeing units

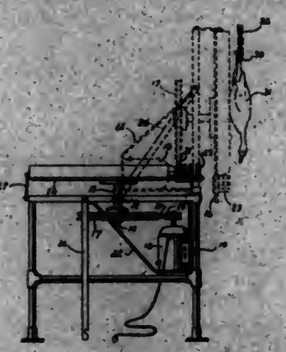
spaced from each other a substantial distance, means for guiding a sheet of yarn through the first singeing unit and then through the second singeing unit, a roller over which the yarn passes after passing through the second singeing unit and a ball warper having a take-up beam disposed between the singeing units onto which

the yarn is wound after passing over said roller, means for stopping the ball warper take-up beam when a strand parts, a centrifugal switch in contact with the roller and means operable by the centrifugal switch when the revolutions per minute of the roller decrease to a predetermined point for rendering inactive the two singeing units.



2,444,554
DETACHING SYSTEM
Frank L. Crockett, Tenants Harbor, Maine, assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Original application October 2, 1940, Serial No. 359,385, now Patent No. 2,353,812, dated July 18, 1944. Divided and this application August 13, 1942, Serial No. 454,751
6 Claims. (Cl. 19—121)

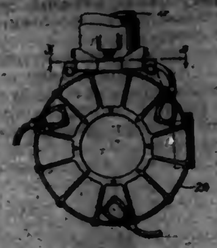
4. In a comber comprising a series of combing heads each containing a rotary comb, a top comb, forwardly and backwardly rotating detaching rolls, and nipper mechanism functioning to present the end of a fiber lap first to said rotary comb and then to said detaching rolls for tuft detachment in completion of a combing cycle, an operating gear train for driving said detaching rolls including two tandem-related planetary couples having their sun gears on different centers, means for oscillating the planets thereof to complete their orbital excursions in about one-half the combing cycle, and a slow motion drive means imparting constant forward angular motion to the gears constituting said operating train during the remainder of such combing cycle.



2,444,555
HEAT TRANSFER MEDIA
William Herbert Dawid, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application September 5, 1945, Serial No. 614,609
4 Claims. (Cl. 252—78)

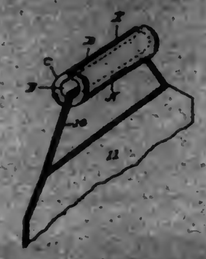
1. In a process for transmitting heat to fluids in indirect contact with heat transmitting material, the step of employing as the heat transmitting material a composition having the general formula—

where R_1 and R_2 are organic radicals selected from the class consisting of phenyl and methyl radicals.



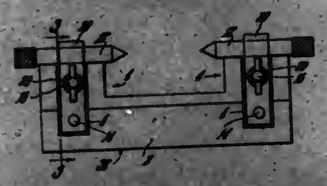
2,444,556
MEANS FOR PLUCKING POULTRY
Harry E. Drews, Ottumwa, Iowa, assignor of one-half to Flournoy Corey, Cedar Rapids, Iowa
Application August 2, 1943, Serial No. 497,011
6 Claims. (Cl. 17—11.1)

1. A poultry picking machine comprising a main frame, a swingable frame pivotally connected with said main frame and shiftable generally from a horizontal position to a vertical position, a rotatable disk carried by said swingable frame and swingable therewith, a plurality of resilient plucking fingers extending outwardly from the face of said disk, and means for driving said disk in either position of said swingable frame.



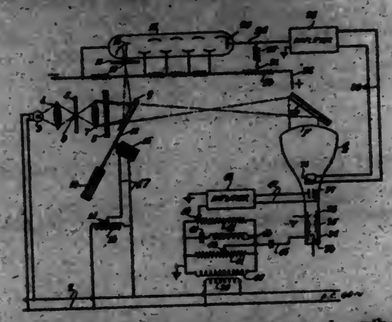
2,444,557
PROPELLER ANTI-ICER
Edwin D. Eaton, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application February 4, 1943, Serial No. 474,684
6 Claims. (Cl. 244—134)

1. An electrical de-icer for airplane propeller blades comprising in combination, a generator the stator of which is mounted adjacent the propeller, a rotor therefor mounted adjacent the propeller for rotation with the propeller and relative to said stator, means to supply a direct current voltage to said stator, leads from said rotor to the propeller blades, and heating elements



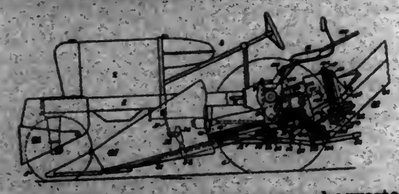
housed within said blades and connected to said leads.

2,444,558
SERVICE HANDLE
Artemus E. Elliott, Pasadena, Calif.
Application December 7, 1945, Serial No. 633,567
2 Claims. (Cl. 224—57)



1. A service handle for carrying articles having cord supports, comprising a handle grip having an inner longitudinal bore and a longitudinal cord admission slot entering said bore, said slot being disposed at a bias endwise from end to end of said handle grip.

2,444,559
CENTERING DEVICE
Robert H. Fay, Wilbraham, Mass.
Application February 8, 1947, Serial No. 727,373
2 Claims. (Cl. 51—216)



1. A work centering device comprising in combination, a body having upwardly extending longitudinally spaced end portions providing a space therebetween for a piece of work, said end portions having adjacent vertical and horizontal longitudinally extending faces forming seats with the corresponding faces of said end portions in alignment, center members for supporting a piece of work movable in said seats and longitudinally thereof, dowels and screws secured to said body, clamp members having holes in lower ends thereof receiving said dowels and holes thereabove receiving said screws, said clamp members having upper faces disposed angularly relative to the faces of said seats for bearing on said center members at sides opposite to the sides engaged by the faces forming said seats, and wing nuts on said screws acting on said clamp members to force the upper faces thereof against said center members.

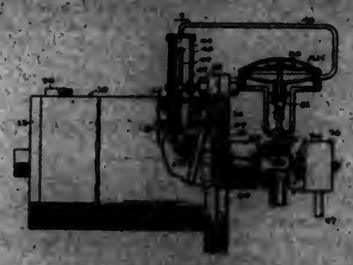
2,444,560
CATHODE-RAY TUBE SPECTROGRAPH
Rudolf Feldt and Carl Berkley, New York, N. Y., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application April 15, 1944, Serial No. 531,272
7 Claims. (Cl. 88—14)

1. In a device of the character described, a source of alternating current power, means to produce a beam of light, means to produce a spectrum from said beam, means comprising a reciprocating mirror resonantly mounted with respect to said source of power and an electromagnet energised by said source to reciprocate said mirror in resonance with said power to scan said spectrum, and means comprising a phototube and an oscilliograph to utilize light from successive portions of said spectrum and produce a signal thereby.

2,444,561
CORN HARVESTER
Hector C. Ferguson, La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application July 16, 1943, Serial No. 494,912
2 Claims. (Cl. 56—18)

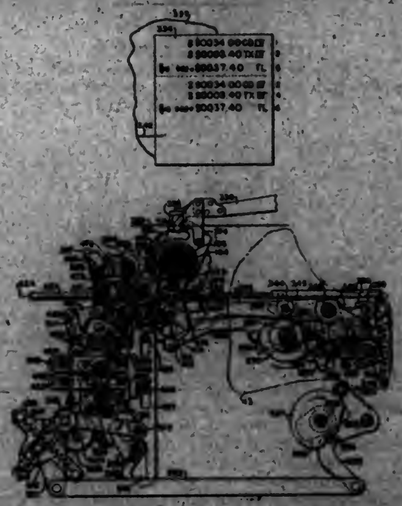
1. In a tractor mounted corn harvester of the type including a supporting frame pivotally and detachably mounted on said tractor, including a pair of cooperative harvesting rolls carried by said frame in forwardly extending relation adjacent each side of the tractor, and including a conveying device carried by said frame for moving harvested ears of corn rearwardly from each of said pairs of rolls, an elevating conveyer detachably mounted on said frame and comprising a hopper structure positioned to receive material from both of said conveying devices and including a central ear collecting portion and side portions extending laterally from opposite sides of said collecting portion, said side portions each having an opening therethrough in rearwardly

spaced generally alined relation with respect to the discharge end of the adjacent one of said conveying devices, a stalk ejecting device mounted on each of said side portions in adjacent relation with respect to the opening therethrough and in rearwardly spaced relation with respect to the discharge end of the adjacent one of said conveying devices, said stalk ejecting devices each comprising a pair of cooperative upright rolls having shaft portions rotatably supported in bearings carried by said side portions, and driving connections for said shaft portions comprising a transverse drive shaft section accessibly mounted on said hopper structure below each of the laterally extending side portions thereof, and an intermediate transverse shaft section carried by said collecting portion and detachably connected to the opposed ends of said transverse driving shaft sections.



2,444,562
FOOT CONTROL ACCESSORY FOR DRILL PRESSES
Joseph W. Fried, Los Angeles, Calif.
Application July 28, 1944, Serial No. 547,052
2 Claims. (Cl. 77—30)

1. A device of the class described comprising a base having a column, a power driven machine having a quill and a spindle adjustably mounted upon the column, a bracket attachable to the quill, a stem on the bracket, a yoke pivotally mounted upon the stem, a treadle, and a cable connecting the yoke to the treadle so as to be operable thereby, the pivotal connection being provided by a pin having portions of two diameters and the yoke having a slot therethrough of varying sizes one portion of which receives that portion of the pin which is of larger diameter and the remainder of the slot receiving that portion of the pin which is of smaller diameter whereby the yoke may be optionally caused to pivot relatively to the stem or may be slid relatively thereto laterally with respect to the quill to disengage the tool which it operates to permit replacement.



2,444,563
REGULATING APPARATUS
Adam H. Gebauer, Short Hills, N. J., assignor to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware
Application December 18, 1943, Serial No. 514,765
5 Claims. (Cl. 210—201)

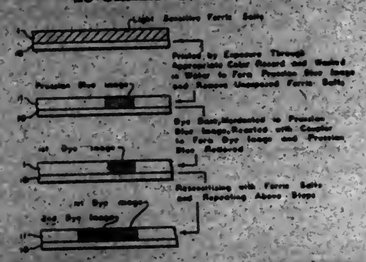
5. The combination of a pressure filter consisting of a filter body provided with an inlet for the material to be filtered and an outlet for the solids separating therefrom, a valve controlling said outlet, a filter element contained within said body for separating the solids from the liquid and being provided with an outlet for the liquid filtrate, means for conveying the separated solids to the solids outlet and for progressively compacting the solids adjacent the solids outlet to provide a material seal, means for regulating the depth of the compacted solids including a member movably mounted on said filter and disposed in the path of said solids and movable by changes in the consistency thereof, an air motor

for actuating the outlet valve, an air valve connected in the supply line to the motor, and means cooperating with said member for actuating the air valve in accordance with the movement of said member, said member moving, independently of said solids conveying means, to one position to cause closing of the valve when the consistency of the material is too soft and to another position to cause opening of the valve when the consistency of the material is too hard.

2,444,564
CASH REGISTER TICKET FEEDING AND PRINTING MECHANISM
Mayo A. Goodhue and George A. Cocup, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application December 6, 1944, Serial No. 566,128
20 Claims. (Cl. 101—68)

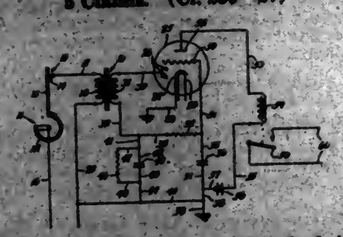
1. In a machine of the class described, arranged to perform a series of related operations and having printing means which functions twice in each of said related operations to print two identical records of each of said operations on an insertable slip to obtain two identical series of records of each series of operations, the combination of means operable differentially in two directions to feed the slips back and forth progressively in line-spacing relation to the printing means and a synchronism with the operation of said printing means to cause the two identical records to be printed one above the other on different portions of said slip; and means to control the differentially operable feeding means to govern the extent of movement of the feeding means in each direction of its movement to cause the series of records of each series of related operations to be properly line-spaced on their respective portions of said insertable slip.

2,444,565
WELDING ELECTRODE HOLDER
Herman J. Hecht, South Bend, Ind.
Application April 10, 1947, Serial No. 740,553
6 Claims. (Cl. 219—8)



3. A welding electrode holder comprising a tube, a conductor shaft slidable within said tube, an insulating sheath enclosing the major portion of said tube and shaft and including a handle portion, a cable connector carried by said shaft, resilient means urging said shaft toward a clamping position, means for shifting said shaft against the action of said resilient means, a head of enlarged cross-sectional size carried by the end of said shaft projecting from said sheath, the outer end of said tube being enlarged and fitting around said head, said head having a transverse electrode passage therein normally at least partly intersected by said tube and positioned clear of said tube end when said shifting means is actuated.

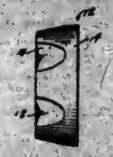
2,444,596
INTERMITTENTLY ROTATABLE ELECTRIC MOTOR
Mark M. Hennessy and Harold J. Lawrence, Milwaukee, Wis., assignors to Durant Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application February 7, 1947, Serial No. 727,010
16 Claims. (Cl. 172—36)



1. A step-by-step rotary electric motor, comprising, a rotary armature, a rotary pole piece cooperable with said armature, means for momentarily magnetizing said armature and pole piece to cause the former to be rotated a definite distance by and relative to the latter, and means for subsequently causing said pole piece to rotate a like distance in the same direction when said armature and pole piece are demagnetized.

2,444,567
COLOR PHOTOGRAPHIC PROCESS
Helen P. Husek, Allston, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application August 27, 1945, Serial No. 612,875
15 Claims. (Cl. 95—6)

1. In a method of forming a dye image in a hydrophilic carrier sensitized with ferric salts, the steps of exposing the carrier, developing the exposed carrier to convert the exposed portion thereof to a Prussian blue image, removing unexposed ferric salts, imbibing into the carrier a solution of a dye base which will mordant to said Prussian blue, treating the mordanted dye base with a coupler to convert the base to a predetermined dye, and removing the Prussian blue image.



2,444,568
ELECTRONIC CONTROL CIRCUIT
Siegfried G. Isenstedt, Toronto, Ontario, Canada, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application March 26, 1943, Serial No. 480,678
5 Claims. (Cl. 250—27)

5. In a device of the class described, in combination, a device to be energized, a switch for controlling the energization of said device and comprising two relatively movable switch contacts, means responsive to a normally slowly changing condition for moving one of said contacts into or out of engagement with the other contact as the condition slowly changes with respect to a predetermined value, said condition responsive means being affected by physical vibrations to cause erratic engagement and disengagement of said contacts when said condition is assuming a value close to said predetermined value, and means controlling the energization of said device in accordance with the ratio

between the continuously integrated durations of intervals of separation of said contacts and those of closure of said contacts, said last named means comprising an electronic discharge device having a control element and controlling the energization of said device, means including a condenser for applying a control voltage to said control element, and means for causing said condenser to charge slowly while said contacts are closed and to discharge slowly while said contacts are open.

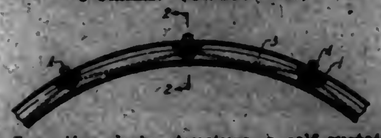
2,444,569
PACKING CUP FOR MASTER PISTONS
Morris Katcher, New York, N. Y.
Application March 11, 1943, Serial No. 478,743
3 Claims. (Cl. 60—54.6)

1. In a hydraulic brake system, a master cylinder, a piston, with bleed passages therethrough, movable in the cylinder, a fluid supply source in constant communication with the rear of said passages, and a cup-shaped flexible packing member having a radially extending rear portion and a circumferential flange extending forward axially from the rim of said rear portion, said rear portion being held seated on the front of the piston, the radially outermost surface of said member being engageable with the wall of the cylinder except for a plurality of spaced depressed areas, which areas extend axially from the rear of the member almost to the forward edge of the flange, each of said areas extending circumferentially of the member a distance at least substantially equal to said axial extent, the rear of the member at said areas being in contact with the front of the piston and radially inward of the passages, flow through the passages being closed by the packing member during forward movement of the piston, the spaces, engendered by said areas, between the wall of the cylinder and the member and the flexibility of the member, allowing the fluid to pass readily through the passages and over the member during rearward movement of the piston.

2,444,570
DRIVE FOR COUNTER NUMERAL WHEELS
Harold J. Lawrence and Mark M. Hennessy, Milwaukee, Wis., assignors to Durant Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application August 23, 1946, Serial No. 692,406
4 Claims. (Cl. 235—1)

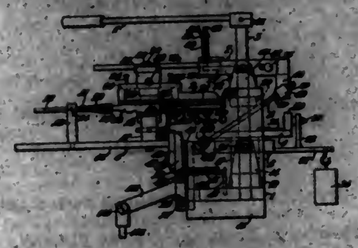
1. In a counter, a numeral wheel having an annular series of equally spaced internal ratchet notches within its peripheral rim and surrounding its central axis, and a unitary spider oscillatable about said axis to intermittently rotate the wheel, said spider having a pair of diametrically opposite integral resilient arms each provided with an integral pawl projecting away from the central axis and movable radially of said axis into and out of the successive notches of said series.

2,444,571
PROCESS FOR MAKING A PURIFYING AGENT FROM STEER BONES
Francis Lostie, Springfield, N. J.
No Drawing. Application April 24, 1947, Serial No. 743,727
1 Claim. (Cl. 252—188)



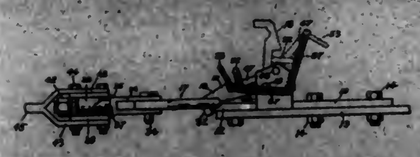
The process of making a purifying agent which consists in burning steer bones, repeatedly washing the same in pure soft water, boiling the burnt bones by dipping them repeatedly in boiling water to extract further organic matter, tempering the bones by next dipping them repeatedly as soon as boiling is finished in water at 45° F. to 50° F., draining and drying said bones, and then baking in an oven for several hours in a temperature of 500° F.

2,444,572
APPARATUS FOR COATING TUBES
Harold Adelbert Leet and Charles Wacke Sectish, Passaic, N. J., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application February 3, 1945, Serial No. 576,012
8 Claims. (Cl. 91—55)



1. A device for coating the inside of cathode-ray tubes, which comprises a liquid inlet and an air inlet extending respectively into the neck and into the bowl of said tube, a seal for the neck of said tube, and a disc shaped baffle in the neck of said tube having an outwardly and downwardly extending upper surface with the rim of said baffle near the inner surface of the neck of said tube.

2,444,573
TIRE CHAIN
Raymond A. Mank, Pittsburgh, Pa.
Application May 28, 1946, Serial No. 672,807
3 Claims. (Cl. 152—242)



3. In a tire chain structure, a self-sustaining molded rubber side rim having reenforcing embedded therein, and means for fastening cross chains to said rim consisting of anchorages for receiving the end link of the cross chains mounted in angularly spaced relation on said side rim.

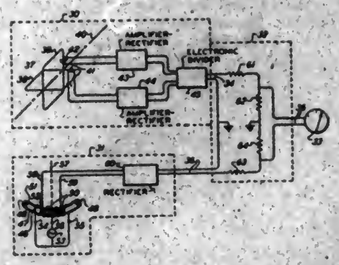
2,444,574
STENCIL DECORATING MACHINE
Bradford Martin, Washington, Pa., assignor, by mesne assignments, to Solar Engineering & Equipment Co., Beaver, Pa., a corporation of Pennsylvania
Application February 22, 1944, Serial No. 523,487
10 Claims. (Cl. 101—124)

1. A machine for stencil decorating, comprising a base having a stencil slidable thereon in back and forth directions, a work carrier pivotally mounted for swinging movement toward and from said stencil at one face thereof, an assembly, including a squeegee pivotally mounted for swinging movement toward and from said stencil at the opposite face thereof, said squeegee and work carrier being cross connected for movement in unison toward and from said stencil, and the pivotal points of said squeegee and work holder being so arranged in relation to their balance that they act as mutual counterweights, a rotatable shaft which is offset to one side of said stencil and which has a member coupled with said stencil for effecting sliding movements thereof when the shaft is rotated, cam members spaced apart from one another and carried by said shaft, a follower for said cam members, and means interconnecting said follower with said work holder and said squeegee whereby they are swung away from said stencil in unison when the follower is in engagement with either of said cams.

2,444,575
COUPLING DEVICE
Eric M. McElhinney, Dysart, Iowa
Application October 1, 1945, Serial No. 619,561
4 Claims. (Cl. 280—33.15)

2. A coupling device for a trailer unit and a tractor unit comprised of a flat body member adapted to have one end supported on one of said units, said body member having a transverse groove adjacent the opposite end thereof adapted to receive a portion of a hitch carried on the other of said units so that said hitch portion is removable from said groove on the application of a pulling force between said two units, a projection extended longitudinally from said opposite end of the body member, an upright support on said body member, a pivoted latch for locking said hitch portion in said groove pivotally supported at one end on said support at a position spaced from said body member, said latch being pivotally movable in one direction to a hitch locking position, and in an opposite direction to a substantially upright position, a laterally extended portion at the free end of said latch movable across the opposite end of said body member and having a recess therein adapted to receive said end projection on the body member, with said latch having a transverse groove therein adjacent to said lateral portion for receiving said hitch portion when the latch is in its hitch locking position, means including tension means for moving and releasably locking said latch in said hitch locking position, said hitch portion, when the latch is in said substantially upright position, being positionable on that part of the body member between its opposite end and said upright support and, when said latch is moved into engagement therewith, being movable to a locked position between said two transverse grooves on an application of a pulling force between said two units.

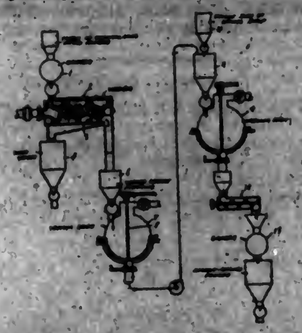
2,444,576
CHIME SWITCH
Milo F. Miller, Kansas City, Mo.
Application March 10, 1945, Serial No. 582,070
7 Claims. (Cl. 200—32)



7. In switch structure for periodically making and braking a circuit, an elongated contact member; a plurality of spaced apart contacts arranged in a line disposed in spaced substantial parallelism to said member; and a reciprocable assembly interposed between and forming a connection between said member and the contacts, said assembly being adapted to make and break the circuit each time the same engages one of the plurality of spaced apart contacts, said assembly comprising a pair of spaced apart conductors, a shiftable element adapted to contain a quantity of flowable substance movable to and from a position for closing the space between the conductors as the element is shifted to thereby complete the circuit, and co-acting apparatus forming parts of the elongated contact member and the shiftable element respectively, for actuating the shiftable element to and from the space closing condition in timed relation with the arrival of the movable assembly on each of the plurality of spaced apart contacts, said parts being operably interconnected whereby the said element is shifted as the assembly is reciprocated.

2,444,577
SAUCE PREPARATION
Hideko Murata, Honolulu, Territory of Hawaii, assignor to King Shoyu Company, Honolulu, Hawaii, a partnership of Hawaii
No Drawing. Application January 20, 1947, Serial No. 723,213
15 Claims. (Cl. 99—145)

1. A process for the production of a sauce which comprises preparing a mixture containing soy bean protein and another vegetable protein, adding a strong mineral acid to said mixture in an amount at least sufficient to hydrolyze substantially completely said proteins, heating said acidified mixture at the boiling temperature for a time sufficient to hydrolyze substantially completely said proteins, neutralizing the resulting hydrolysate to a pH value between about 5.0 and about 6.0, filtering the resulting neutralized medium, adding salt and caramel to the filtrate, concentrating the filtrate, and again filtering to produce the desired sauce.



2,444,578
NAVIGATIONAL METHOD AND APPARATUS
Jacob Neufeld, Tulsa, Okla.
Application June 16, 1942, Serial No. 447,243
14 Claims. (Cl. 343—112)

1. A navigation device including in combination, means for producing a signal representing the bearing of a fixed point on the ground with respect to the longitudinal axis of a craft, an inclinometer for producing a signal representing the angle between the longitudinal axis of the craft and the horizontal, and means responsive to said two signals for producing a resultant signal, the said resultant signal representing the bearing of the fixed point on the ground with respect to the horizontal.

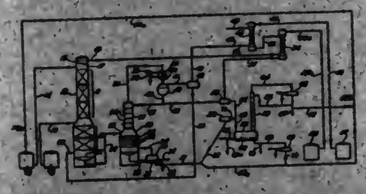
2,444,579
FRUIT PROCESS
Kitchener K. Newsom, San Francisco, Calif.
Application December 28, 1943, Serial No. 515,912
3 Claims. (Cl. 99—204)

1. The process of producing a non-gumming fruit powder as described that comprises the steps, reducing pitted apricots to relatively small pieces, washing said pieces in water of from about 80° F. to about 90° F., draining the surplus water from said washed pieces, partially drying the drained pieces in vacuo to a moisture content appreciably above 6% thereof by weight while constantly agitating the said pieces, mixing a liquid containing vitamins and flavoring with said partially dried pieces, again drying the pieces carrying such vitamins and flavoring in vacuo and while constantly agitating said pieces until the moisture content of the pieces is below about 6% thereof by weight, the said liquid being orange

juice containing substantially the natural vitamin C of the fresh juice.

2,444,580
ADJUSTABLE FEED SHELVES FOR PAPER HANDLING MACHINERY
Vernour E. Pratt and George F. Gray, Norwalk, Conn.
Application October 6, 1945, Serial No. 620,706
6 Claims. (Cl. 271—86)

1. In a device of the character described, a support, corrugated members nested one within the other to form a feed shelf having opposed longitudinal sides formed by the upturned edges of said members, and means comprising clamping members secured to said corrugated members and underlying said corrugated members and extending transversely thereof for securing said corrugated members to said support, said corrugations running lengthwise of the upper surfaces of said members whereby flat sheets fed thereover rest upon the apexes of said corrugations and are held out of contact with the depressed spaces therebetween, whereby sticking of the sheets to the support is prevented.



2,444,581
BILLFOLD WITH SECRET COMPARTMENT
Abraham A. Seamon, Brooklyn, N. Y., assignor to A. & L. Seamon, Brooklyn, N. Y., a firm
Application October 22, 1945, Serial No. 623,687
1 Claim. (Cl. 150—36)

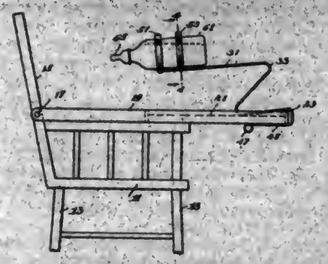
In a billfold having front and rear walls secured together to form a pocket containing front

and rear partitions and front and rear compartments, said rear partition being higher than said front partition, the upper edge portion of said rear wall carrying a flexible tape and slide fastener elements, said slide fastener elements being positioned lower than the upper edge portion of said rear partition, said slide fastener elements extending sufficiently downwardly and lying in fully contacting and covering relation with the upper edge portion of said rear partition and directly concealing the opening to said rear compartment, thereby forming a secret compartment between said rear wall and said rear partition, said partitions being secured to said front and rear walls all along their upright edges, said front partition carrying a complementary flexible tape and slide fastener elements secured to the upper edge thereof and coacting with said slide fastener elements on said rear wall for opening or closing the entrance to said front compartment without disclosing the entrance to said secret compartment and while said secret compartment remains concealed inside said billfold, the covering relation of said upper slide fastener elements over said rear partition causing said rear partition to be pushed beneath said upper slide fastener elements during the action of closing said fastener elements.

2,444,582
SELECTIVE SOLVENT TREATMENT OF LIQUID HYDROCARBON MIXTURES FOR SEGREGATION OF CONTAINED AROMATICS
Allen S. Smith, Ann Arbor, Mich., assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application January 20, 1944, Serial No. 518,964
51 Claims. (Cl. 196—14.40)

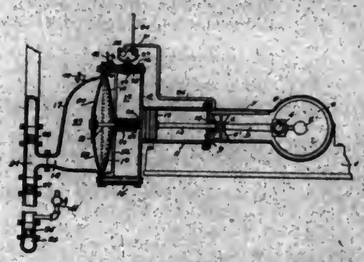
1. The process of extracting a valuable aromatic product from a liquid mixture of hydrocarbons that has both aromatic and non-aromatic components, which comprises intimately contacting such a hydrocarbon mixture in liquid phase with mixed primary and secondary liquid solvents comprising different aliphatic oxygenated polar carbon compounds, the primary solvent compound being at least partially miscible with said hydrocarbon mixture as a whole and selective for the aromatic component of said mixture, and being selected from that group of such compounds which consists of (1) compounds containing a single hydroxyl group in the molecule and (2) compounds containing two hydroxyl groups and at least one other group in the molecule; while the secondary solvent compound is completely miscible with the primary but is only partially miscible, at most, with each of the components of said hydrocarbon mixture and contains at least two hydroxyl groups in the molecule, said oxygenated compounds being so proportioned in the mixed or composite solvent that a mixture of the composite solvent with the most soluble aromatic hydrocarbon to be extracted will separate into two liquid phases; separating the two liquid phases resulting from the intimate contacting of said composite solvent with said liquid mixture of hydrocarbons, namely, a raffinate phase poor in said aromatic component and comprising most of said non-aromatic component, and a solvent or extract phase rich in said aromatic component, and removing solvent from said extract phase to obtain an aromatic extract product; the extraction being performed substantially in the absence of water.

2,444,583
POWER TRANSMISSION BELT
George H. Stewart, Akron, and Eugene R. Traxler, Stow, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application July 15, 1943, Serial No. 494,786
4 Claims. (Cl. 74—233)



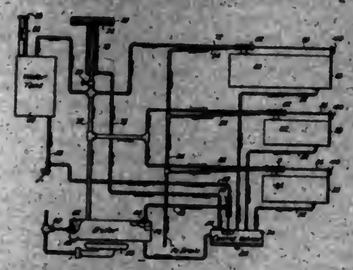
1. A power-transmission belt comprising a body of resilient rubber-like material, and a pair of endless grommets embedded in said body at the neutral zone of the belt, each grommet comprising wire strand material wound upon itself in full-circle courses about the great circumference of the grommet in one helical direction, and weftless cord material wound upon said wire strand material in a plurality of full-circle courses about the great circumference of the grommet in the opposite helical direction providing twist-resisting balance to the grommet and providing diametrical bulk of the grommet and resistance to cutting of the grommet into the rubber-like material of said body under the driving forces on the belt.

2,444,584
SLOPING BOTTOM TRAY AND SUPPORT STRUCTURE
Lawrence Paul Touchett, Fond du Lac, Wis., assignor to E Z Palmtr Corporation, a corporation of Wisconsin
Application October 12, 1945, Serial No. 621,896
2 Claims. (Cl. 220—1)



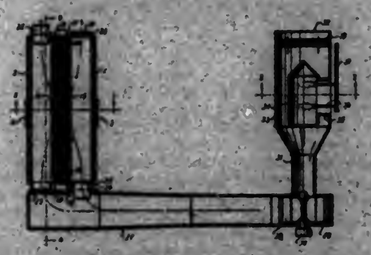
1. A pan of the character described having a deep rear wall, a shallow front wall, two side walls, a bottom tapered upward from the lower edge of the rear wall to the lower edge of the front wall, said bottom attached to all walls at their lower edge, a vertical standard supporting said pan at its forward end said standard of a height to provide a horizontal alignment of the upper edges of said side walls and an inwardly projecting member attached to the inner face of said standard below said bottom.

2,444,585
NURSING BOTTLE HOLDER
Caroline Tubiolo, Rochester, N. Y.
Application November 17, 1944, Serial No. 563,847
3 Claims. (Cl. 248—104)



1. A nursing bottle support for use with a high chair having a tray, said support including an elongated resilient member having one end integrally shaped approximately in the general form of the letter C to extend around an edge of the tray to be clamped thereto by the resilience inherent in said member, and resilient means adjacent the opposite end of said elongated member for resiliently holding a nursing bottle at an elevation above the tray and in a position accessible to the mouth of a child seated in said high chair, said elongated member being shaped to rest on said tray at a point intermediate the ends of said elongated member and spaced substantially from the edge of said tray around which said member is clamped.

2,444,586
PUMP
Charles Erb Wuensch, Saratoga, Calif.
Application March 20, 1944, Serial No. 527,201
8 Claims. (Cl. 103—44)



1. In combination with a pulsating pump including a cylinder and a piston operating therein, an impulse chamber, a pumping chamber having an inlet and an outlet, a flexible diaphragm of substantially greater area than the means supplying the pulsating pumping force separating said impulse chamber from said pumping chamber intermediate said pump and said inlet and outlet, a conduit connecting the portion of the cylinder back of the piston with the impulse chamber for returning to the impulse chamber liquid leaking past the piston, said liquid being pumped by the piston as it moves away from the impulse chamber, a brace in said impulse chamber, an automatic replenishing valve for said impulse chamber and a stem on said diaphragm extending through said brace and having a resilient tension member thereon bearing against said brace.

2,444,587
STEAM COOKER WITH THERMOSTATIC BOILER CONTROL
Cyril Charles Young and Donald F. Troupe, Kansas City, Mo., assignors to The Vendo Company, Kansas City, Mo., a corporation of Missouri
Application August 28, 1944, Serial No. 551,588
10 Claims. (Cl. 126—20.1)

1. A steam cooker comprising a normally closed compartment for receiving the food for processing; a steam generating boiler; a pipe interconnecting the boiler and a source of water supply; a valve in the pipe; a tube joining the boiler and said compartment to convey steam from the former to the latter; a conduit in connection with the compartment to evacuate the same; and a temperature responsive element in the conduit, said element having connection with the valve for actuating the latter upon changes in temperature of the material passing through the said conduit.

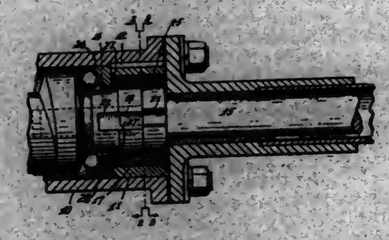
2,444,588
DRYING METHOD
Ross Bassinger and Oliver Ames Wright, Houston, Tex.; said Bassinger assignor to said Wright
Original application February 10, 1944, Serial No. 523,034. Divided and this application February 13, 1948, Serial No. 8,068
5 Claims. (Cl. 34—31)

1. The method of drying grain which comprises forcing a draft of atmospheric air through a body of said grain supported between two opposed, spaced perforate walls, heating said air before it encounters said grain to reduce the relative humidity thereof, measuring the temperature of the grain within the walls adjacent the perforate walls and reversing the direction of flow of said air through the body of grain when the temperature of the grain lying adjacent the perforate wall through which the air enters into the grain approaches a predetermined maximum danger point to which the grain may be heated without injury for the purpose for which the grain is to be used.

2,444,589
PURIFICATION OF ORGANIC NITRILES
William A. Blaine, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 10, 1945, Serial No. 610,190
4 Claims. (Cl. 260—465.6)

1. A process for the purification of acrylonitriles and hydracrylonitriles which comprises removing ionic impurities contained therein by bringing the nitriles into intimate contact with at least one cation exchange material and at least one anion exchange material and then removing coloring bodies contained therein by bringing the partially purified nitriles into intimate contact with a neutral decolorizing body.

2,444,590
CRYSTAL PLATE AND METHOD OF FABRICATING SAME
Geza J. Bokeny, Cleveland, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application September 7, 1944, Serial No. 553,996
15 Claims. (Cl. 171—327)

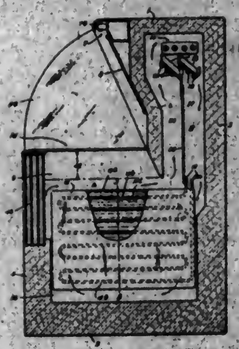


1. In the process of fabricating P-type expander plates, the steps of: providing at least two square Z-cut P-type crystal plates, determining the direction of expansion for each plate for a given exciting electrical field, cutting each of said plates diagonally in half, and connecting the four half plates together by their edge faces to form a single composite rectangular plate with the directions of expansion of the four half plates aligned.

2,444,591
EASY OPENING METAL CONTAINER
John Coyle, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application March 30, 1945, Serial No. 585,641
1 Claim. (Cl. 220—43)

A metal container comprising a body portion having the upper edge thereof bent outwardly and thence downwardly in spaced relation to the body to provide an annular channel encircling said body, a cover having a portion extending outwardly over the body and thence downwardly and frictionally engaging a downwardly extending portion on the body, said downwardly extending portion on the cover and said downwardly extending portion on said body each having an outwardly protecting flange, which flanges are spaced from each other when the cover is seated, and a pry-off lever disposed along the body wall and extending into said channel, said pry-off lever having an outwardly extending portion carrying a pry-off member disposed between the flanges and initially parallel therewith, said pry-off member being of a width greater than the distance between the flanges so that when it is turned by the swing of the lever, it will engage the flanges and forcibly separate the same, said pry-off member, the portion of the lever carrying the same and the portion of the lever extending into said channel serving to prevent removal of the lever while permitting movement thereof to selected position about the container body.

2,444,592
REVERSE BRAKE
William K. Creson, La Fayette, Ind., assignor to Ross Gear & Tool Co., La Fayette, Ind., a corporation of Indiana
Application June 23, 1945, Serial No. 601,151
4 Claims. (Cl. 192—8)



1. A reverse brake, comprising a stationary member having a circular bore, a brake member rotatable in said bore, said brake member being relieved exteriorly over somewhat less than half of its circumference, rotatable driving and driven members coaxial with said bore, said driven member having means engageable with said brake member to urge the relieved portion thereof toward engagement with the surface of said bore when said driven member rotates, said driving member having means engaging said brake member to urge it in the opposite direction when said driving member rotates, and yielding means acting between said brake member and said stationary member and urging the relieved portion of the brake member toward the bore-surface.

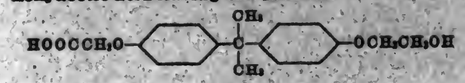
2,444,593
AUTOMATIC TEMPERATURE CONTROL FOR REFRIGERATED OPEN-TOP DISPLAY CASES
Russell E. Davis, St. Louis, Mo., assignor to Hussmann Refrigerator Co., a corporation of Delaware
Application July 31, 1944, Serial No. 547,385
14 Claims. (Cl. 62—6)

1. A refrigerated display case having a lower display chamber and an upper chamber in continuous communication therewith, and a refrigerating circuit of the compressor-condenser-expander type including a motor for operating the compressor, an expansion coil in said lower chamber and an expansion coil in said upper chamber, a thermostat responsive to a predeter-

mined temperature in said upper chamber for starting said motor, and a second thermostat re-

sponsive to a predetermined temperature in said lower chamber for stopping said motor.

2,444,594



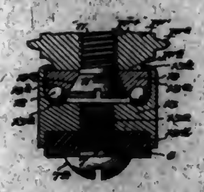
ISOPROPYLIDENE-*p*-PHENOXY-2-ETHANOL-*p*-PHENOXYACETIC ACID

Harold M. Day, Cos Cob, and David W. Jayne, Jr., Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application August 7, 1947, Serial No. 767,335

1 Claim. (Cl. 260—520)

Isopropylidene-p-phenoxy-2-ethanol - p - phenoxyacetic acid having the formula



2,444,595

WASHER ASSEMBLY UNIT

Raymond S. Doerr and Keith Doerr, Battle Creek, Mich., assignors to H. B. Sherman Manufacturing Co., Battle Creek, Mich., a corporation of Michigan

Application March 1, 1945, Serial No. 580,362

2 Claims. (Cl. 251—46)

1. A washer assembly unit, comprising an anti-friction bearing having a first race provided with a bore, and a second race carrying a washer, a housing on said second race embracing the first race for maintaining the said races in operative relation while permitting rotation of the second race on the first race, said housing being formed integrally with said second race and surrounding the first mentioned race and having inturned upper edges closely overlying the first mentioned race.

2,444,596

REVERSIBLE PIPE BENDER WITH DETACHABLE SIDE ABUTMENT MEMBER

John J. Doucette, Malden, Mass.

Application November 15, 1945, Serial No. 628,696

2 Claims. (Cl. 153—40)

1. A pipe or rod bending machine comprising, a substantially rectangular flat base having front, rear and side edges, a lever arm superimposed upon said base and pivoted thereto adjacent said front edge for swinging movement thereover in a plane parallel thereto, a wheel superimposed upon said lever arm, means mounting said wheel in axial alinement with the pivoted axis of said lever arm, means carried by said lever arm for clamping a pipe or rod against the edge of said wheel, a vertically disposed detachable abutment member mounted upon said base along each of the side edges of the latter and tangentially with respect to said wheel, and a movable bearing means carried by the base adjacent each of the inner faces of each of said abutment members and engageable therewith, each of said bearing means being mounted for selective engagement with the outer face of a pipe or rod clamped to said wheel whereby said bearing means will move with a pipe or rod contacting therewith as the latter is bent in response to swinging movement of the lever away from the selected abutment and bearing means.

2,444,597

DUCK RETRIEVER

George William Erickson, Rice Lake, Wis.

Application March 17, 1945, Serial No. 583,351

2 Claims. (Cl. 43—49)

1. A duck retriever of the class described comprising a float in the form of a plug of sufficient size and buoyancy to support a duck while being dragged through a body of water to a landing spot, said plug being substantially circular in transverse cross sectional shape, having a flat surfaced bottom portion to ride through the water and functioning as a stabilizing and righting means, the forward end of said float being tapered and pointed and merging into the flat bottomed portion to guide and facilitate movement of the float through the water, means on said forward end to accommodate a casting and reeling line, and a U-shaped hook of a size sufficient to snare the neck of the duck to be retrieved, said hook being eccentrically positioned in relation to the longitudinal axis of the float and having one limb secured to the float, its bight portion projecting beyond one end of the float and the remaining limb disposed in approximate parallelism to the first limb and the peripheral surface of said float.

2,444,598

TILE-SAWING MACHINE

Wilfred C. Kyles, Bayfield, Colo., and Carl E. Hyatt, East San Diego, Calif.

Application June 16, 1947, Serial No. 754,929

2 Claims. (Cl. 125—18)

1. In a tile-sawing machine, a tank adapted to contain water, a rotary saw operating within the tank, said tank having a groove extending throughout the length of one end wall thereof, said saw operating within the groove and adapted to direct water in the tank upwardly through the groove, a curved guard communicating with the groove and overlying the saw in spaced relation therewith, said guard adapted to receive water from the groove and direct water to the cutting area of the saw.

2,444,599

RAIL FLANGE CLAMP

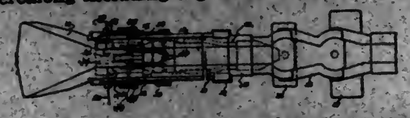
Albert H. Genter, Mount Lebanon, Pa.

Application October 4, 1944, Serial No. 557,096

1 Claim. (Cl. 173—273)

A rail flange clamp for attaching an electric return circuit cable to the flange of a rail consisting of, a body having integral upper and lower diverging jaw members arranged to receive a rail flange therebetween, connecting means for electrically connecting an electric cable to the body, a threaded opening through the upper jaw member with its axis disposed substantially normal to the flange engaging surface of said jaw member, a complementary screw for said threaded opening arranged to engage the top of a rail flange for the purpose of fixing the clamp thereto, and three lugs on the flange engaging surface of the lower jaw member disposed in spaced triangular arrangement about the axis of the screw with two lugs positioned in alignment and adjacent the outer edge of the lower jaw member, whereby the clamping force of the screw reacts with the rail flange and said lugs to prevent the clamp from backing off the flange.

2,444,600



SELF-LOADING DEVICE FOR SHAKER CONVEYERS

Loy D. Hagenbook, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois

Application August 23, 1946, Serial No. 692,546

8 Claims. (Cl. 198—14)

1. In a shaker conveyor, an extensible trough having a pick-up member on its forward end, means for laterally feeding said extensible trough and pick-up member including a flexible feeding member adapted to extend laterally from opposite sides of said extensible trough and to be held from movement with respect to the ground at its ends, a power driven wheel for moving said extensible trough along said flexible feeding member, and means engaging said flexible feeding member for holding said flexible feeding member in engagement with said wheel and maintaining tension on the slack side of said flexible feeding member during movement of said trough therealong including a guide idler spaced to one

side of said wheel and having said flexible feeding member trained laterally therefrom, a tension idler disposed between said wheel and said guide idler and having the bight of said flexible feeding member trained therearound, and a yieldable member for moving said tension idler in a direction to maintain said flexible feeding member in engagement with said wheel and maintain tension on the slack side thereof.

2,444,601

READILY DETACHABLE EXPANDER IN APPARATUS FOR ATTACHING COUPLINGS TO HOSE

Edward H. Hansen, Elkhart, Ind., assignor to Elkhart Brass Manufacturing Company, Inc., Elkhart, Ind., a corporation of Indiana

Application November 27, 1944, Serial No. 565,879

4 Claims. (Cl. 153—80)

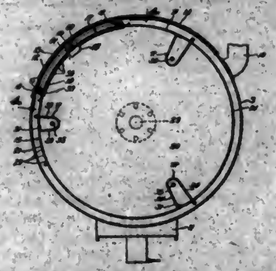
4. Apparatus for attaching couplings to hose by means of axial movement of a tapered mandrel in consequence to relative rotation between cooperating screw threaded parts carried by a supporting stand, characterized by the provision of a readily detachable connection between the mandrel and one of said screw threaded parts established by bodily movement of the mandrel in a path normal to the axis of said screw threaded part and by which connection the mandrel is operated axially as a result of relative rotation between the screw threaded parts; and further characterized by the provision of a holder for the mandrel encircling at least a part of the same for holding the mandrel operatively associated with said screw threaded part connected thereto, and a readily detachable connection between said holder and the supporting stand effected concomitantly with the establishment of the driving connection between the mandrel and said screw threaded part.

2,444,602

BOLT RETHREADING APPARATUS

George C. Hardie, Brooklyn, N. Y.

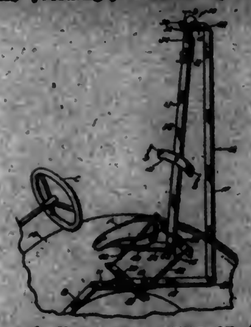
Application October 2, 1945, Serial No. 619,971



3 Claims. (Cl. 10—81)

1. In a bolt re-threading apparatus, a re-threading machine comprising a substantially U-shaped rigid frame having a pair of forked inwardly facing spaced and aligned integral bearings at each end and a further integral bearing

midway between its ends, a driven shaft journalled in each pair of bearings, a pinion secured on each driven shaft between the associated pair of bearings, a drive shaft journalled and longitudinally slidable in said further bearing and having an outer end adapted for driving connection with the power driven tool shaft of a machine, a gear secured on the inner end of said drive shaft and disposed between and meshing with the pinions of the driven shafts, a hollow die holder secured to the inner end of each driven shaft, and a bolt re-threading die secured in the inner end of each die holder.

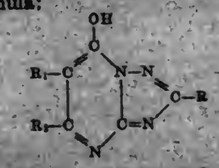


2,444,603
WASHING MACHINE CYLINDER AND CLOSURE MEANS THEREFOR
Leo M. Harvey, Los Angeles, Calif.
Application March 11, 1941, Serial No. 382,715
9 Claims. (Cl. 68—142)

1. In a washing machine, a hollow washing cylinder having an opening in its wall for admitting and removing the clothes, a door for the opening, and means for shiftably guiding the door for movement between open and closed positions comprising runner parts on the door extending substantially parallel with the longitudinal axis of the cylinder and presenting opposing surfaces, and elongate guide parts on the cylinder extending longitudinally of the cylinder at opposite sides of the opening and cooperating with said opposing surfaces to guide the door for said movement and transmit circumferential forces between the door and cylinder in both directions.

2,444,604
SEAT MOUNTING
Floyd C. Hawkins, Arcadia, Calif.
Application May 27, 1944, Serial No. 537,622
4 Claims. (Cl. 155—51)

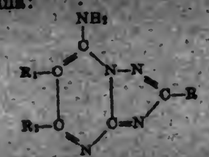
2. A seat mounting including a frame to be secured to a support to project upwardly therefrom, a seat carrying arm having its upper end universally secured to the upper portion of the frame and having a seat support at its lower end, and means yieldingly stabilizing movement of



the arm including cross arms on the arm and frame and springs connected between the cross arms, one of the cross arms being pivotally mounted.

2,444,605
STABILIZERS FOR PHOTOGRAPHIC EMULSIONS
Newton Heimbach and Walter Kelly, Jr., Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application December 15, 1945, Serial No. 635,334
11 Claims. (Cl. 95—7)

1. A photographic material comprising a base and a light-sensitive silver-halide emulsion carried thereby, said photographic material containing, in fog inhibiting amount, a compound of the general formula:

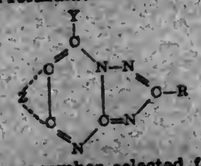


wherein R and R_1 are members selected from the class consisting of hydrogen, alkyl, aryl, alicyclic, and heterocyclic groups, and R_2 is a member selected from the class consisting of amino, hydroxy, alkyl, alicyclic, aryl, and heterocyclic groups, R_2 being a group other than alkyl when R and R_1 are hydrogen.

2,444,606
STABILIZERS FOR PHOTOGRAPHIC EMULSIONS
Newton Heimbach and Walter Kelly, Jr., Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application December 15, 1945, Serial No. 635,335
11 Claims. (Cl. 95—7)

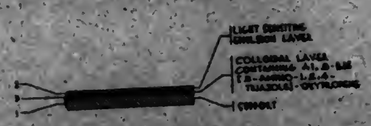
1. A photographic material comprising a base and a light-sensitive silver-halide emulsion car-

ried thereby, said photographic material containing, in fog inhibiting amount, a compound of the general formula:

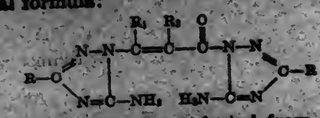


wherein R and R_1 are members selected from the class consisting of hydrogen, alkyl, alicyclic, aryl, and heterocyclic groups, and R_2 is a member selected from the class consisting of alkyl, alicyclic, aryl, and heterocyclic radicals.

2,444,607
STABILIZERS FOR PHOTOGRAPHIC EMULSIONS
Newton Heimbach, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application December 15, 1945, Serial No. 635,336
11 Claims. (Cl. 95—7)

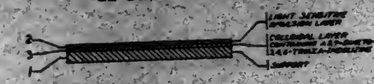


1. A photographic material comprising a base and a light-sensitive silver-halide emulsion carried thereby, said photographic material containing, in fog inhibiting amount, a compound of the general formula:

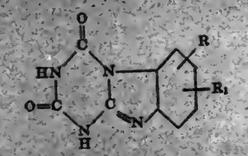


wherein R is a member selected from the class consisting of hydrogen, alkyl, alicyclic, aryl, and heterocyclic groups, Y is a member selected from the class consisting of amino and hydroxy, and Z represents the atoms necessary to complete a member selected from the class consisting of a 5-membered and 6-membered alicyclic and heterocyclic ring structure.

2,444,608
STABILIZERS FOR PHOTOGRAPHIC SILVER-HALIDE EMULSIONS
Newton Heimbach and Walter Kelly, Jr., Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application April 23, 1946, Serial No. 664,254
11 Claims. (Cl. 95—7)

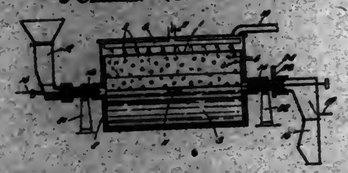


1. A photographic material comprising a base and a light-sensitive silver-halide emulsion carried thereby, said photographic material containing, in fog inhibiting amount, a compound of the general formula:



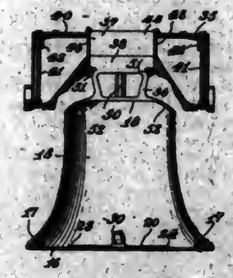
wherein R is a member selected from the class consisting of hydrogen and alkyl groups, R_1 is a member selected from the class consisting of alkyl, aryl and aralkyl groups, and R_2 is a member selected from the class consisting of hydrogen, allyl, and alkyl groups.

2,444,609
STABILIZERS FOR PHOTOGRAPHIC SILVER-HALIDE EMULSIONS
Newton Heimbach and Robert H. Clark, Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application May 18, 1946, Serial No. 670,687
11 Claims. (Cl. 95—7)



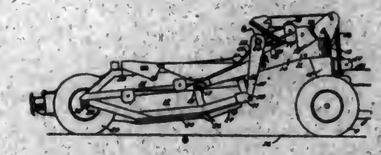
1. A photographic material comprising a base and a light-sensitive silver-halide emulsion carried thereby, said photographic material containing, in fog inhibiting amount, a compound of the formula:

wherein R is a member selected from the class consisting of hydrogen and halogen, and R_1 is a member selected from the class consisting of hydrogen, aliphatic, alkoxy, carbalkoxy, carboxy and halogen groups.



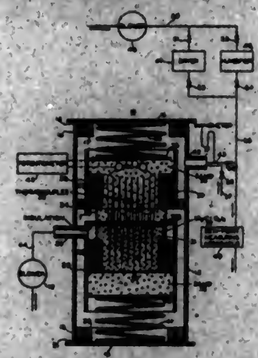
2,444,610
TREATMENT OF PETROLEUM CRACKING RESIDUES
Emil Hene, London, England
Application August 17, 1945, Serial No. 611,129
In Great Britain August 31, 1944
5 Claims. (Cl. 196—79)

1. A process for the manufacture of hydrocarbon distillates, coke and asphaltic material from residues obtained in the cracking of petroleum which comprises soaking lumps of porous carrier material with a residue obtained in the cracking of petroleum, heating the soaked lumps in a gaseous atmosphere so as to evaporate the more volatile hydrocarbons and leave a coating of the less volatile hydrocarbons and of coke on the



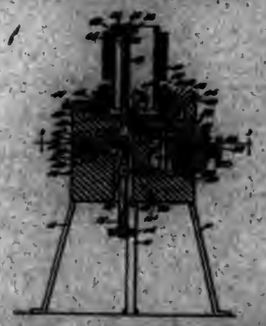
lumps of porous carrier, and submerging the thus coated lumps in a molten material selected from the group consisting of molten metals and molten salts, at a temperature above the softening point of the hydrocarbons forming the coating so as to cause liquid products to rise to the surface of the molten material.

2,444,611
SAVINGS BANK
Jonathan I. Houck, Pottstown, Pa.
Application October 28, 1947, Serial No. 782,497
4 Claims. (Cl. 232—4)



1. A savings bank comprising a coin container having an upper reduced end provided with a coin slot in said end, a hollow bar located above the upper end of the container, a pair of spaced U-shaped brackets connecting the bottom of the bar with the top of the container and forming part of a passage-way for coins to the slot, the upper end of the bar being open, a plate closing the open end of said bar and provided with a coin slot in vertical alinement with the slot in the container, and a channel member depending from the plate for directing coins between the spaced brackets to the slot in the container.

2,444,612
EARTH MOVER
Loiell L. Hyler, Cedar Rapids, Iowa, assignor to La Plant-Choate Manufacturing Company, Incorporated, Cedar Rapids, Iowa, a corporation of Delaware
Original application May 27, 1944, Serial No. 537,623. Divided and this application June 18, 1945, Serial No. 600,136
5 Claims. (Cl. 37—126)



1. An earth mover comprising a main bowl, a yoke frame mounted to pivot with respect to said main bowl, a plurality of track ramps on said yoke frame, each of said ramps being disposed at a different inclination with respect to said yoke frame, a support arm pivoted on said main bowl, a roller on said support arm, and means for moving said roller over each of said ramps in turn.

2,444,613
LOW HUMIDITY METER
Horace R. McCombie, Pittsburg, and Coleman D. Wilder, Berkeley, Calif., assignors to the United States of America as represented by the United States Atomic Energy Commission
Application August 31, 1943, Serial No. 500,648
2 Claims. (Cl. 73—29)

1. A hygrometer comprising a casing, an element supported within said casing, said element having a porous structure and containing a dehydrating agent having a finite heat of absorption, means defining a passage through said casing including said element, means for establishing a substantially uniform and predetermined rate of flow of gas containing moisture through said passage, whereby the gas is diffused through said element into intimate contact with said contained dehydrating agent in order to control the temperature of said agent in accordance with the moisture content of said gas at said predetermined rate of flow, and an indicator controlled in accordance with the temperature of said agent and calibrated in terms of moisture content of the gas contacting said agent at said predetermined rate of flow.

2,444,614
PISTON RING RIDGE REMOVER
Barton E. Myers, Rome, N. Y., assignor of one-half to Walter T. Kozlowski, Clark Mills, N. Y.
Application October 17, 1944, Serial No. 559,045
4 Claims. (Cl. 51—105)

1. A cylinder grinder which includes a cylinder support mounted to rotate about a vertical axis, a shaft mounted adjacent the cylinder support to rotate about an axis eccentric to the axis of the cylinder support and to rock in a plane

which lies radial to the axis about which the cylinder support rotates, yielding means to hold the shaft parallel with the axis of the cylinder support, means to rotate the shaft and a grinding wheel on the shaft to engage work carried by the cylinder support.

2,444,615
EDUCTOR
Albrecht E. Reinhardt, Fleurtown, Pa., assignor to Derbyshire Machine & Tool Company, Philadelphia, Pa., a copartnership
Application November 21, 1946, Serial No. 711,306
3 Claims. (Cl. 103—267)

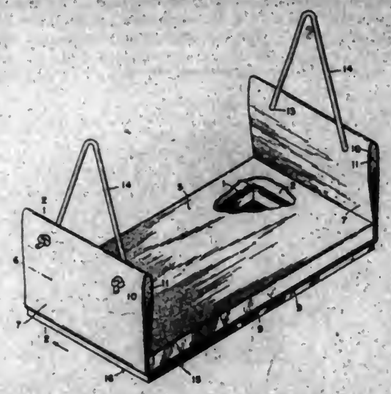
1. An eductor comprising an elongated hollow body having an inlet at its lower end, a tube coaxially held within the body to provide an annular passageway for fluid under pressure, a pair of jet nozzles secured at opposite ends of the annular passageway, said jet nozzles co-operating to lift water and debris entrained therein through said inlet and tube, a conduit secured to said hollow body and extending generally parallel thereto and having means at its upper end for attachment of a hose or the like, said conduit being bent at its lower end to discharge into the annular passageway in a direction at right angles to the common axis of the body and tube, a guide vane within the bent portion of the conduit and dividing the fluid flowing through the conduit into two streams, and a crowned flow-dividing member secured to the body within said annular passageway in the direct path of the fluid discharged from the conduit and co-operating with the guide vane to divide the fluid into two streams moving in opposite directions through said passageway to said jet nozzles.

2,444,616
DRY CELL WITH SEALING MEANS
Arthur F. Rock, Lakewood, Ohio, assignor to General Dry Batteries, Inc., Lakewood, Ohio, a corporation of Ohio
Application June 27, 1946, Serial No. 679,816
3 Claims. (Cl. 136—133)

3. In a dry cell embodying a cylindrical zinc container having an open end and in which are disposed a mass of mix and a central carbon electrode; an absorbent tubular jacket embracing said container and projecting beyond the open end thereof, an end seal comprising a mass of molded sealing material closing the open end of said container, embracing said carbon electrode and closing the end of said absorbent jacket beyond the end of said container, the wall of said container being turned inwardly, adjacent the upper end thereof and embedded in said sealing material, a metallic cap enclosing the end of said carbon electrode and extending over said mass of sealing material in engagement therewith and having a peripheral flange embedded

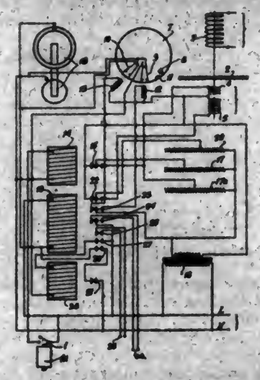
in said sealing material, and a separately formed tubular member composed of insulating material impervious to the electrolyte of the cell surrounding said absorbent jacket and having inwardly extending end flanges, one of which engages the bottom wall of said container, the other of which engages the peripheral portion of said cap.

2,444,617
PROTECTOR FOR HATS
Joseph V. Samuels, San Francisco, Calif., assignor of thirty per cent to Odis Will Chenault, San Francisco, Calif.
Application August 5, 1944, Serial No. 548,203
3 Claims. (Cl. 2—187)



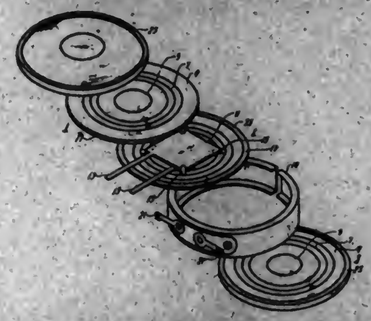
1. A hat protector constructed of thin flexible material and having a crown portion and an upper brim portion secured to the edge of said crown portion, and a lower brim portion having a corresponding size to that of the upper brim portion and having a minor portion of its edge secured directly to a corresponding portion of the edge of the upper brim portion, the major portions of the edges of the lower brim portion and the upper brim portion being connected to each other by releasable securing means and free to separate from each other to admit a hat between the lower and upper brim portions when said securing means is operated to releasing position.

2,444,618
SWING SEAT
Norman John Seamster, Tucson, Ariz.
Application June 18, 1946, Serial No. 677,551
5 Claims. (Cl. 155—58)



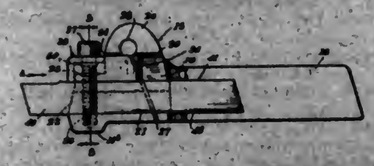
1. In a swing seat, a wooden frame, a fabric covering for the frame, a folded fabric strap underlying the covered frame and extending beyond opposite ends of the frame with its ends turned back upon themselves and forming loops for con-

nection to a suspending means, strips underlying the strap at said opposite ends of the frame and



fastened to the frame, thereby affixing the strap and covering to the frame.

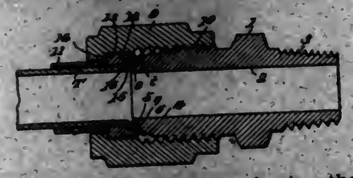
2,444,619
ELECTRICAL TIMING DEVICE
Cecil Hill Smith, London, and Herman Lindars, Sheffield, England; said Smith assignor to said Lindars
Application August 30, 1945, Serial No. 613,656
In Great Britain September 14, 1944
12 Claims. (Cl. 175—320)



1. An electrical timing device of the kind to receive primary electrical current impulses from a first electrical circuit which act to close a secondary electrical circuit including apparatus to be controlled, for a period of time which is a desired fraction of the duration of the primary impulses, the said timing device comprising an electric eddy-current motor of the watt-hour meter type having two current magnets which act on the movable element to urge it in opposite directions, means to cause energisation of one magnet when the primary electrical current impulses flow, means to cause energisation of the other magnet at predetermined intervals comprising contacts closed by the movable element of the motor under the action of the one magnet, means to cause de-energisation of said other magnet when the movable element of the motor has returned to a zero or starting position, and means to close the secondary circuit during the period that the movable element of the motor is returning to the zero or starting position, said other magnet causing the movable element to move at a faster rate than does the one magnet.

2,444,620
DAMPING MEANS FOR MECHANICAL VIBRATORY DEVICES
Alfred L. W. Williams, Cleveland Heights, and Dean R. Christian, Medina, Ohio, assignors to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application June 23, 1944, Serial No. 541,694
9 Claims. (Cl. 179—110)

1. In combination, a vibratory mechanical system comprising a diaphragm having a non-planar surface configuration, the system having a resonance frequency, a substantially rigid member spaced apart from but closely adjacent to the face of said diaphragm and including at least a portion formed of sintered-together minute discrete particles having a plurality of minute air channels therethrough, means sealing said rigid member to the peripheral edge of said diaphragm to form an enclosure substantially air-tight except for said minute air channels, the volume of said enclosure and the number and size of the minute air channels through said portion formed of sintered particles being such that sufficient acoustic resistance load is imposed on the said vibratory system to effect substantial damping of its resonace frequency vibrations, the surface of said rigid member facing said diaphragm having a configuration closely approximating the surface configuration of said diaphragm whereby said resistance load is imposed substantially uniformly on said diaphragm.

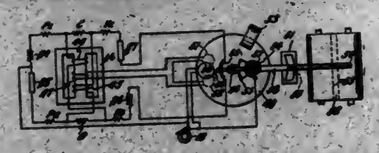


2,444,621
TOOLHOLDER
Harry C. Wilson, Sherman Oaks, Calif., assignor to Robert H. Clark, Los Angeles, Calif.
Application January 29, 1945, Serial No. 575,005
3 Claims. (Cl. 29—97.5)

1. In a tool holder of the character described, a shank for mounting said holder, a head carried by the shank comprising an inner portion rigidly connected with said shank and an outer portion

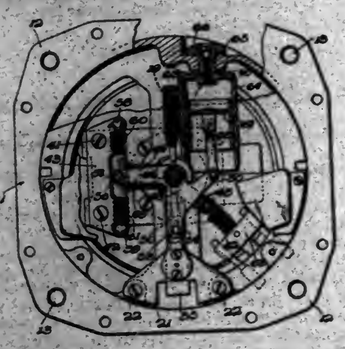
yieldingly connected with the inner portion, and a member for clamping a tool to the outer portion and having opposed walls engaging opposite faces of both the inner and outer portions of the head whereby twist of one with respect to the other is obviated.

2,444,622
COUPLING FOR TUBES
John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application September 22, 1944, Serial No. 555,306
1 Claim. (Cl. 285—122)



A coupling for metal tubes having the ends thereof flared comprising coupling members having a threaded connection, one of said members having a seat against which the flared end of the tube is clamped, said seat having an inner conical portion and an outer conical portion, said outer conical portion being offset outwardly of the inner conical portion so as to provide a shoulder therebetween, terminating at the outer conical portion and so that the inner portion of the flared end of the tube contacts initially solely with said outer conical portion of the seat, the other coupling member having associated therewith a clamping head provided with an outer conical portion disposed radially outwardly from the shoulder so as to initially engage the outer face of the flared end of the tube in the region opposed to the outer conical portion on the seat, said head having an inner conical clamping portion initially out of engagement with the flared end of the tube whereby when the coupling is closed the outer portion of the flared end of the tube will be deformed and the shoulder embedded in said flared end of the tube.

2,444,623
SHINGLE
Herbert Abraham, New York, N. Y., assignor to The Ruberoid Co., New York, N. Y., a corporation of New Jersey
Application November 27, 1945, Serial No. 631,023
3 Claims. (Cl. 108—7)



1. A roofing shingle of the type described comprising a rectangular head and a rectangular butt extending downward centrally from the lower edge of the head, the head and butt being of substantially the same vertical height, the butt having a notch in each side substantially midway between the lower edges of the head and butt, each notch having a vertical inner edge of the height of which is substantially equal to one-third of the total height of the butt, said notches forming a locking tab at each of the lower corners of the butt, said shingle being adapted to be laid in courses with like shingles, with the shingles of the several courses locked together, to provide a covering of at least two layers of material throughout and having T-shaped exposure patterns.

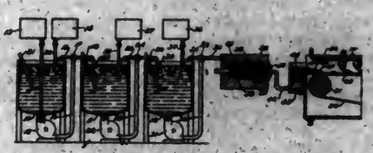
2,444,624
ELECTRICAL BRIDGE AND GALVANOMETER CIRCUITS
Clare Andersen, Kinnelon, N. J.
Application January 15, 1946, Serial No. 641,318
15 Claims. (Cl. 177—351)

1. Bridge connected apparatus comprising a responsive device having at least one controlling winding and a second controlling winding, an impedance device connected between a terminal of said first named winding and a terminal of said second winding, a second impedance device connected between the other terminal of said first named winding and the other terminal of said second winding, variable controlling means connected in a circuit from the connection between said first named winding and said first named impedance device to the connection between said second winding and said second impedance device, additional variable controlling means connected in a circuit from the connection between said first named winding and said second impedance device to the connection between said second winding and said first named impedance device, said additional controlling means being variable independently of said first named controlling means, and a source of energy connected between said first named and said additional variable controlling means.

2,444,625
RATE OF TURN INDICATOR
James E. Bevins, Hackensack, N. J., assignor to Bendix Aviation Corporation, Bendix, N. J., a corporation of Delaware
Application March 15, 1943, Serial No. 479,263
8 Claims. (Cl. 33—204)

4. A turn indicator comprising a rotor mounted for spinning about one axis and a gimbal sup-

porting the rotor for precession about a second axis perpendicular to said first axis, means controlled in accordance with said precession, yieldable means comprising a dash-pot for opposing operation of said controlled means, a bracket secured to said gimbal and pivotally connected to said controlled means, means connected to said bracket for resiliently constraining precession of said rotor, and vibration damping means constituting a driving connection between said bracket and said controlled means, said vibration damping means comprising a pair of opposed spring members having their outer ends anchored to said bracket and their inner ends anchored to said controlled means.



2,444,626

METHOD AND APPARATUS FOR CONTINUOUSLY TRANSFORMING A DISPERSION OF A RUBBERY MATERIAL INTO A SHEET

Willard F. Bixby, Cleveland, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Original application May 9, 1942, Serial No. 442,350. Divided and this application October 1, 1945, Serial No. 619,581

13 Claims. (Cl. 18—15)

1. The method of continuously transforming an aqueous dispersion of a synthetic rubber comprising a polymer of a butadiene-1,3 into a synthetic rubber sheet which comprises producing from said dispersion an aqueous slurry of discrete synthetic rubber crumbs of a substantially uniform diameter between about 0.2 mm. and about 1 mm., depositing a uniform layer of the crumbs upon a pervious moving surface, directing upon the moving layer of crumbs a stream of water flowing in substantially the same direction as the movement of the layer of crumbs upon the surface so as to wash the individual crumbs without substantially disturbing their relative positions in the moving layer, and to permit the individual crumbs in the layer to cohere to form a porous sheet, applying pressure to the porous sheet on the moving surface sufficient to close the pores and form a continuous sheet and then removing the sheet from the moving surface.

2,444,627

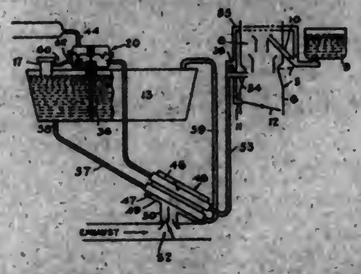
ELECTRICAL HEATER FOR LIQUID COOLED ENGINES

Ralph L. P. Braun, Ann Arbor, and Sam Urbant, Inkster, Mich.

Application October 14, 1946, Serial No. 703,166

3 Claims. (Cl. 219—38)

1. A water heater attachment for application to a standard expansion plug hole in a water circulating jacket, comprising a casing open on one side, said open side being applicable to the exterior of said jacket in alignment with said expansion plug hole, said casing being closed at its outer side, being provided with internal electrical heating means and with a central tubular hub, said hub being open at opposite ends, and a T-shaped bolt and nut assembly, the cross-head of said bolt being adapted to span the expansion plug hole and to engage marginal portions of the jacket surrounding the hole, the shank of the bolt extending outwardly through and beyond the hub and secured in place.



2,444,628

INTERNAL-COMBUSTION ENGINE

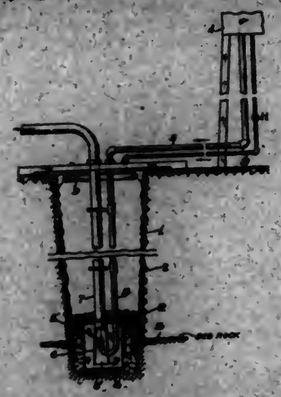
Southwick W. Briggs, Washington, D. C., and Roscoe C. Porter, Arlington, Va., assignors, by direct and mesne assignments, to The Briggs Filtration Company, Bethesda, Md., a corporation of Maryland

Application December 28, 1944, Serial No. 570,164

14 Claims. (Cl. 123—25)

1. In an internal combustion engine having a fuel mixture induction system, an enclosed container, the lower portion thereof defining a water reservoir and the upper portion defining a head space, a pair of steam generating tubes, a first conduit including one of said tubes and connecting the water reservoir with said induction system for supplying steam thereto, a second conduit including the other of said tubes and connecting the water of said reservoir with said head space for supplying steam thereto to establish a differential of pressure between the head space and the induction system for effecting flow through the first conduit, and means for heating said tubes.

2,444,629



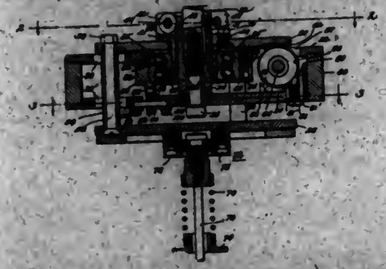
METHOD OF PLACER MINING

Benjamin Bromberg, Berkeley, Calif.

Application March 5, 1945, Serial No. 581,137

2 Claims. (Cl. 262—1)

1. A method of mining which consists in sinking a shaft in an area to be mined, directing water against the sides of the shaft and allowing it to flow downwardly thereon, whereby particles of material from the sides are released and carried to an area at the bottom of the shaft, screening the finer particles from those that are coarser, and conveying the finer particles together with the water directed against the sides of the shaft to the surface of the ground.



2,444,630

COMBINED TACHOMETER AND ACCELEROMETER

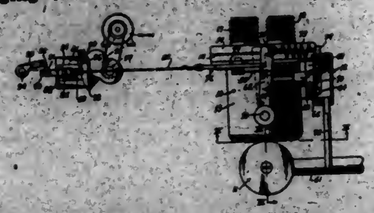
Thomas W. Brown, Framingham, Mass., assignor to Lombard Governor Corporation, Ashland, Mass., a corporation of Massachusetts

Application December 15, 1945, Serial No. 635,387

1 Claim. (Cl. 264—6)

A combined tachometer and accelerometer comprising in combination, a rotatable member, a central hub secured to said member, said hub being constructed and arranged for attaching said member for rotation to a rotating element, a sleeve disposed around said hub for rotary movement therewith and axial movement thereto, a follower carried by said sleeve for rotary movement therewith, a cam carried by said rotatable member, a roller assembly interposed between said follower and said cam, said roller assembly having rolling contact with said follower and said cam, a flywheel mounted for rotation around said sleeve, a cam mounted on said flywheel, and a follower mounted on said rotatable member for co-operation with the cam last mentioned.

2,444,631



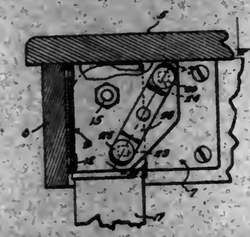
MIXER VALVE AND CONTROL

Thomas B. Chace, Chicago, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois

Application March 10, 1944, Serial No. 525,851

14 Claims. (Cl. 236—12)

13. A fluid control means comprising an automatic temperature control mixer valve having a plurality of inlet ducts adapted to receive fluid at different temperatures, a mixed fluid outlet duct, an adjustable temperature responsive element controlling fluid flow through said inlet ducts to maintain a desired temperature of the mixed fluid, fluid pressure responsive means for changing the setting of said element, conduit means communicating between said last mentioned means and said mixer valve, and cyclically operable valve means, independent of said element, directly controlling the flow of fluid through said conduit means, thereby selectively energizing said fluid pressure responsive means according to the cycle of operation of said valve means.



2,444,632

LOCK FOR HOLDING TABLE LEGS

Foster D. Chick, Kenosha, Wis.

Application October 15, 1946, Serial No. 703,296

1 Claim. (Cl. 311—99)

A folding table leg assembly comprising a plate secured to a table adjacent one of the inside faces of each leg and having a pair of openings, a spring projected detent carried by the leg for selective engagement in said openings to secure the leg in folded or open position, a leaf spring secured to said plate with its ends free and disposed over said openings, and a push-button carried at each end of the spring and having portions thereof insertable in said openings to release the detent, when said ends and the corresponding push-buttons are selectively depressed.

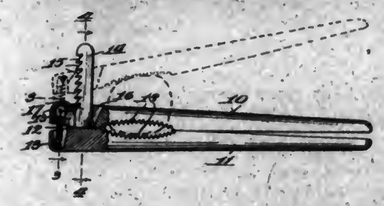
2,444,633

OBTURATOR FOR ORDNANCE

Arthur Crossley, Bolton, England

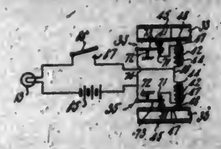
Application January 12, 1944, Serial No. 518,029

In Great Britain June 8, 1943



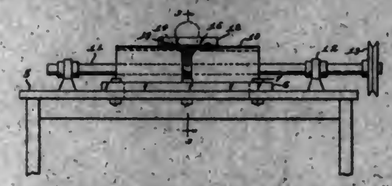
12 Claims. (Cl. 89—26)

1. An obturator for sealing the breech of breech loading guns comprising a non-metallic annular pad of a resilient composition, and front and rear protecting rings for the pad keyed to said composition and, with the pad, forming a unitary struc-



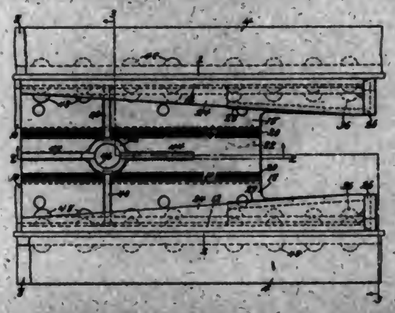
ture, the resiliency of the pad being such that under axial pressure of discharge of the gun in which the pad is used, said pad is expanded transversely to make lateral sealing contacts while on subsidence of the pressure the pad recovers and returns substantially to normal.

2,444,634
HAND OPERATED NUTCRACKER WITH RECIPROCATING JAW
Elias L. Daniel, Los Angeles, Calif.
Application May 28, 1945, Serial No. 596,200
1 Claim. (Cl. 146—16)



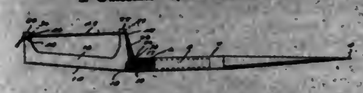
In a nut cracker, a pair of handles, a retractile spring connecting the forward ends of said handles, the forward portion of one handle being provided with an aperture, an integral post projecting at right angles from the other handle and extending through said aperture, the inner end well of said aperture being inclined so as to permit the apertured handle to tilt vertically when moved upwardly from the lower handle, the front edge of which post is notched, a tooth formed on the apertured handle and extending rearwardly from the upper end of said aperture, for engaging the notches on said post and the adjacent inner faces of said handles rearwardly from said aperture being provided with shallow corrugated recesses for the reception of nuts to be cracked.

2,444,635
TRUCK WARNING DEVICE
Thomas H. Dennis, Jr., Tarrytown-on-Hudson, N. Y.
Application December 21, 1945, Serial No. 636,429
7 Claims. (Cl. 177—311)



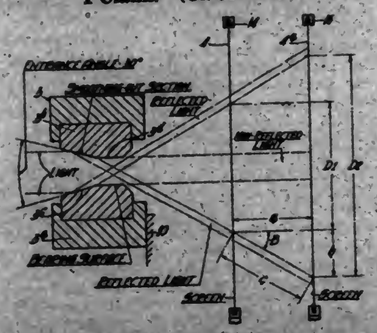
1. A vehicle warning device comprising, in combination, feeler means arranged to project beyond an end of the vehicle to contact an obstruction in the path of the vehicle; means for mounting said feeler means adjacent one end of the vehicle; biasing means urging said feeler means to an extended position beyond such end of the vehicle; an electrically energized signal mounted on the vehicle; a switch in circuit with said signal and a source of power and operable by said feeler means upon inward movement from such extended position due to contact with an obstruction in the path of the vehicle to energize said signal; latching means normally effective to retain said feeler means in a retracted position inwardly of such end of the vehicle; and means operable, when the vehicle is conditioned to move in a direction to advance such one end, to release said latching means so that said biasing means urges said feeler means to a position in advance of such end.

2,444,636
OYSTER PUNCHING MACHINE
Leary Dickerson, Jamaica, Va.
Application January 5, 1945, Serial No. 571,407
5 Claims. (Cl. 17—9)



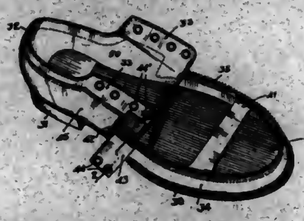
1. An oyster punching machine comprising a rotatable shaft, a hood mounted over said shaft, and a cutter bar extending radially from said shaft having cutting edges at its ends adapted to move in a slot formed in said hood, said hood having recesses on opposite sides of the slot to receive and position an oyster shell in the path of movement of the cutter bar.

2,444,637
PLATE METAL SILL BRACE AND DRAFT GEAR STOP
William F. Dietrichson and John Christiansen, Berwick, Pa., assignors to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application February 5, 1944, Serial No. 521,196
1 Claim. (Cl. 213—57)



As an article of manufacture, a plate metal center sill brace and draft gear stop comprising, a pair of angle shaped pressings having vertical and horizontal flanges each laterally offset to accommodate the bottom chord angles of a center sill, back stops overlapping and welded to one end of the flanges of said angle shaped pressings, buttressing means secured to said back stops and vertical flanges rearwardly of the back stops, spaced semi-cylindrical vertical members fixed at their lower ends to the horizontal flanges of said pressing and arranged medially between the vertical flanges of same, transversely extending vertically arranged tie plates fixed at their outer and lower edges to the flanges of said pressings, and having their inner upright edges secured to the outer adjacent faces of said cylindrical members, and longitudinally extending braces extending medially between the vertical flanges of said pressings and secured to the horizontal flanges of same, one of the vertical edges of each of the longitudinal braces extending between and being attached to the spaced semi-cylindrical members and forming a connecting means therebetween.

2,444,638
TEETH CLEANING DEVICE
Albert L. Debbins, Kansas City, Mo.
Application March 8, 1946, Serial No. 652,864
1 Claim. (Cl. 132—92)

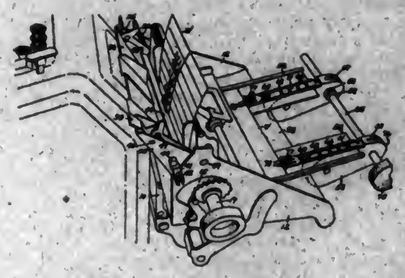


A device for cleaning teeth comprising a handle having a forwardly open recess for the reception of a supply of dental floss therein, the mouth of said recess being threaded and having an aperture in a wall thereof, a head having a pair of upstanding support members longitudinally spaced from each other, said head being provided with a tubular threaded extension threaded into said mouth, there being an L-shaped duct in said extension, said L-shaped duct registering with the aperture in said mouth to form a duct leading from said recess and out of said handle for the passage therethrough of the dental floss from said supply, each support member being provided at its distal end portion with a guide slot extending longitudinally therethrough, the guide slots in said support members suspendingly supporting a length of the dental floss drawn from said recess, the support member farthest removed from the recess in said handle being provided upon opposite sides of its longitudinal guide slot with slots extending transversely from the side edges thereof and terminating at a point spaced from the guide slot, whereby passing the end of the dental floss projecting from the longitudinal guide slot around the front face of the distal end portion through one of said transverse slots and then rearwardly across the back face of the distal portion underneath the portion of the floss in the longitudinal slot, and thence into the other of said transverse slots and forwardly out of the latter slot, places the dental floss suspendingly supported between said support members under tension and secures the tensioned floss.

2,444,639
PROJECTION METHOD FOR MEASURING THE INNER CONTOURS OF WIRE DRAWING DIES
Flint C. Elder, Cleveland Heights, Ohio, assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application March 11, 1944, Serial No. 526,080
1 Claim. (Cl. 88—24)

A method including projecting light through the entrance of the die hole of a wire drawing die substantially parallel the die hole axis onto the periphery of the die hole smoothing-out section and through the die hole bearing surface section, spacing a light projection screen beyond the exit of said die hole at a right angle to its axis, measuring the image projected on said screen by the reflected light emitting from the exit of said die hole, altering the initial spacing between the exit of said die hole and said screen a known amount while maintaining the said angularity between the die hole axis and said screen, measuring the image projected on said screen when located in said second position, the amount of the change in the radius of said image resulting from altering the spacing between the exit of the die hole and screen forming the base of a right triangle, the altitude of said triangle being the said known amount of the altering of the spacing between the exit of the die hole and the screen, and determining the included angle between the altitude and hypotenuse of the said triangle to determine the angle of the smoothing-out section of said die.

2,444,640
BLUCHER TYPE SHOE WITH REMOVABLE PLUG
William H. Epstein, Brooklyn, N. Y.
Application October 19, 1946, Serial No. 704,387
4 Claims. (Cl. 36—2.5)



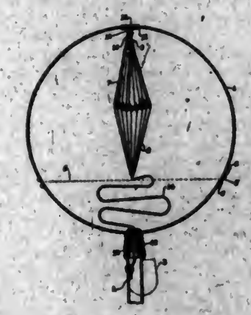
2. In a moccasin-type shoe having a quarter provided with lacing flaps or bluchers, a sole portion, a vamp portion secured around said sole portion and extending rearwardly to a point beyond the forward edge of said bluchers, a slide fastener tape secured to and co-extensive with the marginal edge of said vamp portion, a removable plug adapted to conform to the marginal edge of said vamp portion and carrying a slide fastener tape about its marginal edge, a slide fastener cooperatively engaging said tapes for detachably securing said plug to said vamp portion, said plug having a strip secured thereto about the marginal edge thereof, said strip being of sufficient width to cover said slide fastener tapes with said upper in attached position, each of said bluchers having a pocket with a flap opening upwardly for the reception of said slide fastener and the ends of said slide fastener tapes, each of said flaps having a pair of eyelets disposed at the free end thereof for registration with a corresponding pair of eyelets on the lace stays of said bluchers, whereby said slide fastener and the ends of said slide fastener tapes will be securely retained within said pockets.

2,444,641
ADJUSTABLE PAPER STOP FOR BUSINESS MACHINES
Arthur J. Fettig, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a corporation of Michigan
Application November 27, 1942, Serial No. 467,085
4 Claims. (Cl. 197—140)

1. Adjustable stop means comprising a housing having wall portions defining a storage space of

generally circular cross section, a second space within said housing, and a passage between said spaces in said housing, a longitudinally self-straightening spring tape having longitudinally spaced perforations and extending through said passage and having one end portion coiled within said storage space by confinement by the wall thereof, a sprocket wheel in said second space within said housing and having teeth engaging in

said perforations in said tape, means exterior to said housing to rotate said sprocket wheel to move said tape into and out of said storage space through said passage, said housing having an opening through which said tape passes from said sprocket wheel, a stop on the exterior end of said tape, and guide means engaging the edges of said tape exteriorly of said housing.



2,444,642

BALLOON APPARATUS AND PARACHUTE ASSOCIATED THEREWITH

Leonard P. Frieder, Great Neck, and Walter S. Finken, Brooklyn, N. Y.; said Finken assignor to said Frieder

Application December 18, 1946, Serial No. 717,062

17 Claims. (Cl. 244—32)

1. An apparatus for launching a loaded parachute, consisting of a free balloon of the lighter-than-air type so constructed that it will burst when it reaches a rarified atmosphere during its ascent, a parachute confined within the balloon which is freed by bursting of the balloon, and a load on the exterior of the balloon connected to the parachute in such manner that descent of the load will be retarded by the parachute after the balloon bursts.

2,444,643

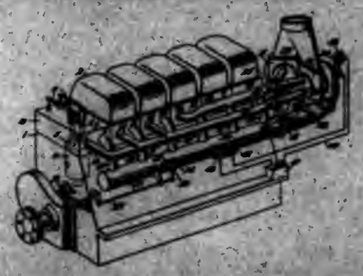
POLYMERIZATION OF BUTADIENE-1,3 HYDROCARBONS IN ACIDIC AQUEOUS EMULSION IN THE PRESENCE OF A PERSULFATE AND ALUMINUM CHLORIDE

Charles F. Fryling, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application April 12, 1944, Serial No. 530,724

3 Claims. (Cl. 260—85.5)

1. In the process of producing synthetic rubber by the polymerization of a monomeric material predominantly containing a butadiene-1,3 hydrocarbon in an aqueous emulsion containing a water-soluble persulfate in an amount sufficient to initiate the polymerization and an emulsifying agent yielding an acidic emulsion, said emulsifying agent being a water-soluble salt of an organic base containing a hydrocarbon chain of 8 to 24 carbon atoms, the improvement which consists in carrying out the polymerization in the additional presence of from 0.01 to 2.0%, based on the weight of the monomeric material, of aluminum chloride whereby precoagulation during polymerization is substantially prevented and a fluid latex containing a synthetic rubber of improved quality is obtained.



2,444,644

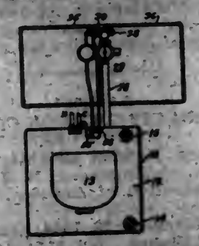
SPEED RESPONSIVE REGULATION OF TURBOSUPERCHARGED ENGINES

Johann Füllemann, Washington, D. C., assignor to Alfred Buchi, Winterthur, Switzerland

Application July 31, 1943, Serial No. 496,926

4 Claims. (Cl. 60—13)

1. In a turbo-supercharging system for internal combustion engines to be operated under widely varying speed ranges especially adapted for delivering high torque at low speed, the combination of a plurality of exhaust-gas-driven turbo-chargers each comprising exhaust gas turbine means and air blower means driven thereby, air delivery conduits connecting the blower means and the engine for conducting compressed air to the engine from the blower means in parallel, exhaust gas conduits having a separate connection with each turbine means for conducting the engine exhaust to the several turbine means in parallel, a valve system in the conduits for controlling the flow of exhaust gases to the turbine means, valve operating mechanism connected to the engine and operating in response to engine speed to cut off the flow of exhaust gas to certain of the turbine means, at low engine speed, and to deliver the entire exhaust gas supply to the remaining turbine means so that the speed thereof and the speed of the blower means driven thereby is adequate to deliver air at higher pressure and in larger volumes at low engine speed than would be possible with all turbine and blower means operative.



2,444,645

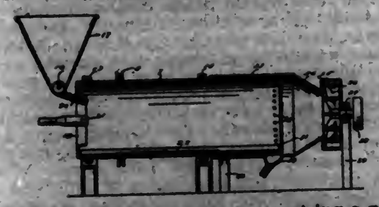
FLUID HANDLING SYSTEM FOR AUTOMATIC CLEANSING APPARATUS

Peter Eduard Goldhof and Luther Ringer, St. Joseph, Mich., assignors to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York

Application January 22, 1945, Serial No. 573,879

6 Claims. (Cl. 68—12)

1. In an automatic cleansing apparatus having a fluid container for the performance of a succession of cleansing operations, said container having an outlet, a hose having an end connected to said outlet, two-way valve and storage pump means adapted for mounting remote from said container and adjacent a reservoir and a drain and adapted to have communication therewith, said two-way valve having an inlet connected to said hose, a first outlet in communication with said storage pump and a second outlet positioned to discharge to said drain, hydraulically operated means for operating said two-way valve and storage pump so that when said valve is in one position fluid from said container may pass through said valve inlet and first outlet to the storage pump and reservoir and when in a second position fluid may pass to said drain, said hydraulically operated means operating said storage pump so that fluid may be pumped from the reservoir through said valve and back to said container.



2,444,646

SMELTING FURNACE

Dee Giles, Farmington, N. Mex.

Application April 4, 1944, Serial No. 529,530

2 Claims. (Cl. 266—33)

1. A smelting unit for ore comprising a rotary drum; a hopper for containing combustible material and finely crushed ore, an outlet from the hopper to the interior of the drum and a burner protruding into the drum, and a freely rotatable roll gravitating in the drum.

2,444,647

COMBINATION CALENDAR AND MEMORANDUM PAD HOLDER

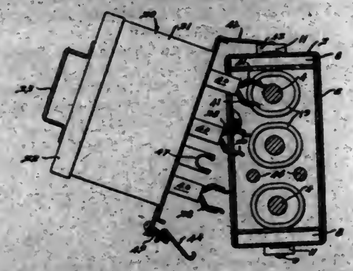
Evangel A. Haveles, Los Angeles, Calif.

Application April 28, 1945, Serial No. 590,784

2 Claims. (Cl. 281—15)

1. In a device of the character described, the combination of a memorandum pad cradle with side and end walls having horizontally extending flanges near one end at the upper side thereof, a bracket having clip portions engaging said horizontally extending flanges removably secured

thereto having a pencil clasp comprising two spaced similar spring plates both of which are integral with said bracket, and a calendar pad holder comprising integral bent flanges stamped from said bracket.



2,444,648

CURRENT DISTRIBUTION DUCT

John G. Jackson and Ralph H. Kingdon, Detroit, Mich., assignors to Square D Company, Detroit, Mich., a corporation of Michigan

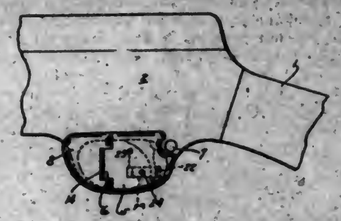
Application May 5, 1942, Serial No. 441,826

18 Claims. (Cl. 174—72)

1. A current distribution duct system comprising an enclosure having rigid, round conductors extending therethrough, said conductors having a common external diameter and certain of them being tubular with varied wall thicknesses and other solid rods so as to supply only a sufficient copper cross-section to maintain a predetermined current density for varied current ratings for the conductors in the duct, the conductors regardless of current carrying capacity maintaining the common external diameter so as to permit the association of standardized current take off units therewith regardless of the current carrying capacity of the conductors within the duct.

2,444,649

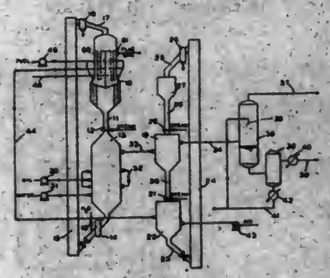
TRIGGER SAFETY LOCK FOR GUNS



Charles E. Jacobs, Minneapolis, Minn.

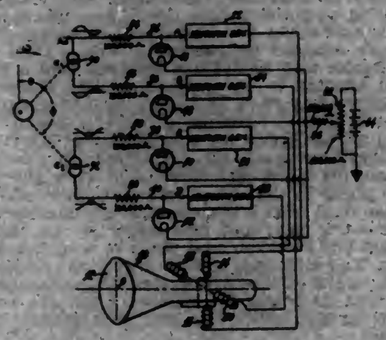
Application March 20, 1946, Serial No. 655,779

2 Claims. (Cl. 42—70)



1. In combination with a gun having a trigger and a transversely-open trigger guard, a latch plate normally closing one side of the trigger guard and vertically pivotally mounted in

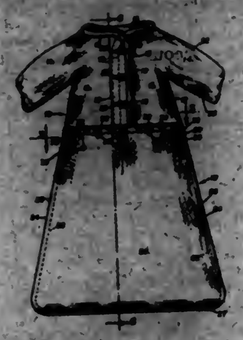
forwardly spaced relation to the trigger, a longitudinally adjustable latch element carried by and projecting inwardly from said latch plate and orientated to project behind the trigger and posi-



tively lock the same against tripping movements, when said latch plate is in closed position on said trigger guard, and means yieldingly biasing said latch plate toward said trigger guard.

2,444,650
PROCESS FOR CRACKING HYDROCARBONS AND APPARATUS THEREFOR
George L. Johnson, New York, N. Y., and William A. Hagerbaumer, Westfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application April 4, 1946, Serial No. 659,442
3 Claims. (Cl. 196—55)

1. A process for conducting a high temperature cracking treatment of a fluid hydrocarbon for a predetermined period of time which comprises moving a solid granular heating agent in a cyclic manner through a heating zone and a first contacting zone below said heating zone, moving a solid granular cooling agent in a cyclic manner through a cooling zone and a second contacting zone above said cooling zone, burning fuel in heated air to generate high temperature products of combustion, contacting said products of combustion with said heating agent to raise the temperature thereof in said heating zone to a temperature above the desired cracking temperature, transferring the high temperature heating agent directly downward to said first contacting zone, passing said hydrocarbon in direct contact with said high temperature heating agent in said first contacting zone to thereby heat said hydrocarbon to said cracking temperature, transferring hydrocarbon products of such heating to said second contacting zone and therein passing said hydrocarbon products in direct contact with said cooling agent to thereby quench said hydrocarbon products to a low temperature at which heavy components thereof are condensed thus raising the temperature of said cooling agent and depositing carbonaceous material thereon, transferring the heated cooling agent to said cooling zone, passing an excess of air in direct contact with said cooling agent in said cooling zone to burn off said carbonaceous material and to lower the temperature of said cooling agent not substantially greater than said low temperature and heat said air, and transferring the heated air to said fuel burning step for generation of high temperature products of combustion as aforesaid.



2,444,651
SHAPING CIRCUIT FOR CATHODE RAY TUBES
Mack C. Jones, Haddon Heights, and Leslie E. Matsen, Jr., Collingswood, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application November 30, 1944, Serial No. 565,860
7 Claims. (Cl. 315—24)

1. A cathode ray tube scanning system comprising in combination a cathode ray tube including means for generating an electronic beam and a fluorescent screen for indicating impinging electrons of said beam, means for deflecting said beam along angularly disposed, radial lines on said screen, a source of saw-tooth deflecting signals, means for applying said signals to said deflecting means for procuring a radial sweep of said beam, a source of quadrate phase, sine-wave potentials, means for applying said potentials to modulate said signals whereby to procure a rotation of the plane of said radial sweep, and diode means connected between said source of sine wave potentials and said source of deflecting signals for modifying said potentials whereby to modify the resultant boundary of the area scanned by said beam upon application of said modulated signals to said deflecting means.

2,444,652
CHILD'S SLEEPING GARMENT
Gracia Evelyn Joyce, Dixon, Ill.
Application November 27, 1946, Serial No. 712,667
7 Claims. (Cl. 2—69.5)

1. A sleeping garment of the class described comprising an upper jacket portion adapted to be fastened at the front and inner and outer lower bag portions enlarged downwardly therefrom and each lower bag portion at the top having a front flap, the flap of the inner bag portion being fastened to the inner side of the flap of the outer bag portion and the flap of the outer

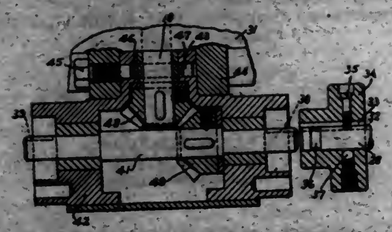
bag portion adapted to be fastened to the bottom of the outer jacket portion at the front.

2,444,653
DRILL PIPE CLEANER
Grosvenor A. Kennedy and Charles O. Moore, Denver, Colo., assignors to Gates Rubber Company, Denver, Colo., a corporation of Colorado
Application June 18, 1945, Serial No. 600,194
1 Claim. (Cl. 15—210)

In a drill pipe cleaner of the type comprising a reenforcing member in the form of a flat metal ring and a wiper member of resilient rubber composition entirely enclosing the reenforcing member, the wiper member having normally a central truncated conical projection on one side apertured for the reception of the drill pipe, both surfaces of said projection being provided with at least two concentric ribs whose sides taper inwardly towards the opening and whose end walls are substantially perpendicular to the median plane of the conical projection, the intersection of the two angularly related surfaces of the ribs forming a sharp corner for separating slime from the pipe when it is moved in the direction of the conical projection.

2,444,654
NICKEL ELECTRODE FOR WELDING CAST IRON
Theodore Ephraim Kihlgren, Scotch Plains, N. J., assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 15, 1944, Serial No. 526,909
5 Claims. (Cl. 219—8)

1. An arc welding electrode for welding cast iron consisting of a core wire containing between 96.5% and 99.5% nickel and a flux coating enclosing said core wire, said flux coating containing about 10 parts to 30 parts carbon, about .25 part to 2.5 parts titanium in the form of an alloy, iron powder ranging up to 30 parts, from 45 parts to 85 parts slag-forming materials and a binder.



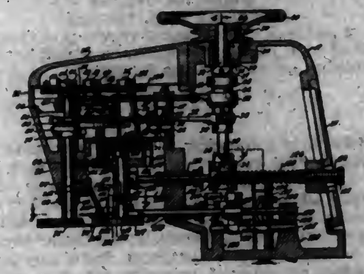
2,444,655
ABRASION-RESISTANT POLYMERS AND PROCESS FOR PREPARING SAME
Edwin H. Kreeker, Cheltenham, and Willard J. Crozall, Bryn Athyn, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application March 10, 1945, Serial No. 582,170
27 Claims. (Cl. 260—84)

1. A process for preparing resinous acrylic polymers of high abrasion resistance which comprises combining an ester of the formula:

$$CH_2{=}C(R){-}CH_2(OC_nH_{2n})_mOOCC(R'){=}CH_2$$

wherein R is a member of the class consisting of hydrogen and methyl groups, R' is a member of the class consisting of hydrogen and methyl groups, C_nH_{2n} represents an alkylene chain of two carbon atoms between oxygen atoms, n being an integer having a value of two to three, inclusive, and m represents an integer from one to two, inclusive, an organic peroxide which is effective as a polymerization catalyst below 100° C., and an organic peroxide which is effective as a polymerization catalyst above 120° C. and is not rapidly decomposed when boiled in toluene, heating the resulting mixture at a temperature between about 25° C. and about 75° C. until an insoluble, at least semi-rigid product results, and heating said product at a temperature from about 120° C. to about 180° C. until a tough, abrasion-resistant product is formed.

2,444,656
INKING MECHANISM FOR PRINTING MACHINES
Frederick Lamatsch, Grantwood, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application August 24, 1945, Serial No. 612,328
14 Claims. (Cl. 101—350)



2. In a printing machine having an ink distributing member, an ink pump, means to direct ink from said pump to the ink distributing member, a first shaft driven by the printing machine and adapted to have its direction of rotation reversed, a second shaft for operating the ink pump and required to be rotated only in one direction, and a reversible drive unit for drivingly connecting said first and second shafts to drive the second shaft in its required direction of rotation from the first shaft driven in either direction of rotation; a drive unit reversing means comprising an intermediate third shaft mounted to be swung about the axis of the second shaft to selectively present either of its ends adjacent to an end of the first shaft, means to drivingly connect the selected end of the third shaft to the adjacent end of the first shaft, and means drivingly connecting said second shaft to said third shaft.

2,444,657

SEWING MACHINE

Harold J. Le Vesconte, Glendale, Calif., and Albert M. Schweda, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois

Application October 12, 1944, Serial No. 558,322
21 Claims. (Cl. 112—16)

1. In a sewing machine, a housing comprising an upstanding base and a bracket extending laterally of said base, a feeding mechanism supported by said bracket and including a pair of substantially vertically arranged rotary shafts carried by and depending from said bracket, cooperating feed wheels attached to the lower ends of said shafts, and means for moving one of said shafts and the corresponding feed wheel about an axis that is substantially parallel to the axes of said shafts, and actuating means for the feeding mechanism including a main shaft and devices operated by said main shaft for imparting rotation to the feed wheels.

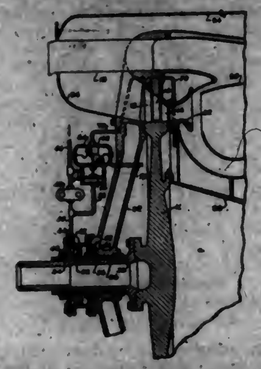
2,444,658

BALL JOINT RETAINER

Joseph E. Lucas, Longview, Tex., assignor of one-tenth to M. Neal Smith and M. Jones Porter, Gregg County, Tex.

Application January 9, 1947, Serial No. 721,097
5 Claims. (Cl. 287—90)

1. A retainer for ball joints having ball ended stud members secured within socket members on supporting structure, including a pair of substantially parallel flat plates secured together by a plurality of bolts with said members assembled and clamped therebetween, one of said plates having dished portions corresponding numerically and configuratively with the end portions of said socket members thereby positioning said plate relative thereto.



2,444,659

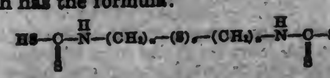
THRUST BALANCING MEANS

Wilton G. Lundquist, He-Ho-Kus, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York

Application November 24, 1944, Serial No. 565,020
5 Claims. (Cl. 253—39)

1. In a turbine power plant a turbine rotor adapted during operation to be subjected to an axial thrust by a pressure differential across said rotor, a pump operative during turbine operation to apply a fluid pressure against a surface on said rotor for opposing said pressure differential,

a relief valve for the pump output pressure, and means operable to urge said relief valve in a closing direction with a force variable with changes in said pressure differential.



2,444,660

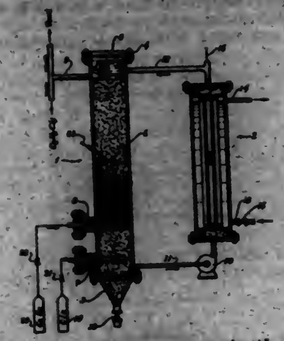
SALTS OF DITHIOCARBAMIC ACIDS

Roger A. Mathes, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application March 10, 1945, Serial No. 582,168
3 Claims. (Cl. 260—429)

1. The metal salts of a bis-dithiocarbamic acid which has the formula:

where n is an integer from one to three and x is an integer from one to four, said salts being selected from the group consisting of alkali metal salts, alkaline earth metal salts and salts of zinc, iron, lead, copper and manganese.



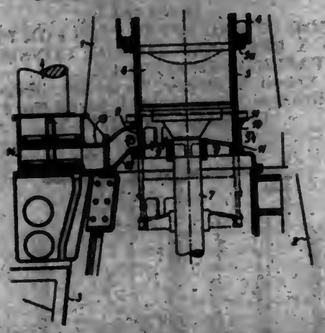
2,444,661

PROCESSES FOR PRODUCTION OF ACETYLENE TETRACHLORIDE

Aylmer H. Maude, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York

Application February 9, 1946, Serial No. 646,553
6 Claims. (Cl. 260—660)

1. The process for production of acetylene tetrachloride by reaction of acetylene with chlorine which comprises introducing gaseous chlorine into a mass of comminuted iron in a reaction zone; introducing the acetylene into said zone at a level substantially above the level of introduction of the chlorine; circulating a body of acetylene tetrachloride downward through said reaction zone, at a velocity not exceeding the upward velocity of bubbles of acetylene in liquid acetylene tetrachloride, and at a temperature between 70° and 95° C.; conducting said body, augmented by the acetylene tetrachloride formed in the reaction zone during its passage therethrough, through a cooling zone; withdrawing from said body acetylene tetrachloride in quantity equivalent to that acquired during its last passage through the reaction zone; recycling the remainder thereof through the reaction zone; and regulating the cooling in said cooling zone to



maintain the stated temperature in the reaction zone.

2,444,662

CYLINDER CONSTRUCTION

Mark Ferdinand Meinertz, Copenhagen, Denmark

Application January 25, 1946, Serial No. 643,345
In Denmark April 20, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 20, 1963
6 Claims. (Cl. 123—193)

1. In an internal combustion engine, a piston, a working cylinder receiving said piston, a cylinder extension detachably connected with the working cylinder and constituting a pumping chamber, a bushing receiving the cylinder extension and having a port for the passage of fluid to or from the pumping chamber, a rod carried by said piston, and a cover for the pumping chamber slidably receiving said rod, said cylinder extension being movable axially through said bushing after detachment from the working cylinder to render the piston accessible.

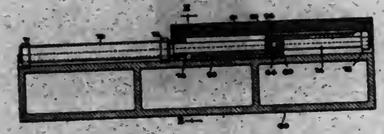
2,444,663

PIPE AND CIGARETTE LIGHTER

William J. Miller, Jr., Denver, Colo.

Application February 14, 1947, Serial No. 728,559
5 Claims. (Cl. 67—7.1)

4. A pocket lighter comprising: a case; a fuel reservoir in said case, one side edge and one end of said case being open; an arm hinged at the extremity of said side edge and arranged to close the latter when swung to the closed position; a pivoted latch closing the open end of said case, said latch engaging said arm to maintain the latter in the closed position; a spring urging said arm to the open position; a wick on the extremity of said arm; a sparking wheel positioned on said arm adjacent said wick; a shaft extending from said sparking wheel into said case; igniting means operable by said wheel; means in said case adapted to rotate said shaft as said arm swings to the



open position; a toothed pinion on said shaft within said case; stationary gear teeth in said case engaging said pinion to rotate the latter during the opening movement of said arm; a flint tube in said arm terminating adjacent said sparking wheel; a flint in said tube and a spring urging said flint against said sparking wheel for ignition purposes.

2,444,664

MACHINE TOOL

Frederick E. Munschauer, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y.

Application June 1, 1945, Serial No. 597,137
5 Claims. (Cl. 51—233)

1. In a machine tool, a bed element, a work table element mounted for guided lineal movement thereon, and drive means for effecting lineal movement of said work table element, said drive means comprising a cylinder fixed to one of said elements and piston means secured at one end to the other of said elements, the other end of said piston means being disposed for reciprocation in said cylinder, means guiding said piston means against lateral deflection and slidably engaging the piston means between its ends, gear means carried by the guiding means for free rotation, a rack fixed to said bed element and meshing with said gear means, and a rack fixed to said work table element and meshing with said gear means at the opposite side thereof, whereby said guiding means automatically moves along said bed element at a rate having a fixed fractional relation to the rate of movement of the work table element.

2,444,665

INTERNAL-COMBUSTION ENGINE

August L. Oberbeck and Joe Martin, Jefferson City, Mo.

Application March 7, 1947, Serial No. 733,256
3 Claims. (Cl. 123—127)

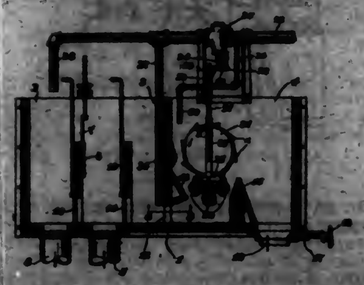
1. A dual fuel system for internal combustion engines comprising fuel compartments having different fuels, a pair of carburetors connected with an intake manifold of an engine, dual accelerator pedals connected respectively to the carburetors to operate the same, a fluid pressure supply arrangement for delivering fuel oil to the carburetors including selector valve means, and

connection means between the respective foot pedals and the selector valve means for automati-

cally causing the diversion of the selected fuel depending upon which accelerator is operated.

2,444,666
COUPLING DEVICE
François Marie Orain, Saint Cloud, France
Application February 27, 1940, Serial No. 321,105
In France March 3, 1939
Section 3, Public Law 690, August 8, 1946
Patent expires March 3, 1959
5 Claims. (Cl. 287—90)

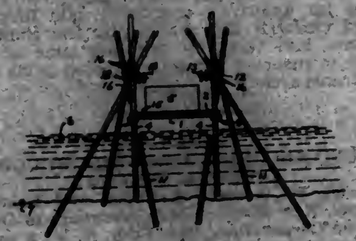
1. A coupling device for coupling two mechanical elements, which comprises two co-operating clamping members, one of the elements to be coupled being connected to one of said members, whereas the other element is adapted to be clamped removably between said two clamping members, a threaded rod secured to one of said members, a threaded sleeve secured to the other member, means for preventing relative angular movement between said rod and said sleeve, a threaded control member adapted to co-operate with the threads of said rod and said sleeve to impart to these latter a relative longitudinal movement in either direction and consequently cause said clamping members to move towards and away from each other, and resilient means interposed between said clamping member secured to said rod and the upper face of said control member, whereby said elements can be reliably, readily and quickly coupled and uncoupled.



2,444,667
REFRIGERATING APPARATUS
Lawrence A. Philipp, Detroit, Mich., assignor to Nash-Kelvinator Corporation, Detroit, Mich., a corporation of Maryland
Application June 12, 1946, Serial No. 676,267
1 Claim. (Cl. 62—89)

Refrigerating apparatus comprising a cabinet having a casing, said cabinet having an opening, a door for closing said opening, a unitary refrigerating system including a refrigerant evaporator, a condenser and a motor compressor unit removably mounted in said cabinet, a closed refrigerant containing system having a portion secured to said casing about said opening and two U-shaped portions arranged with one U-shaped portion be-

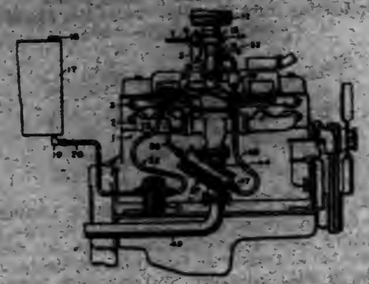
ing positioned on one side of said unit and the other of said U-shaped portions being positioned on the opposite side of said unit and a removable clamp engaging said U-shaped portions to removably hold said portions in engagement with said unit.



2,444,668
METHOD OF AND APPARATUS FOR PROVIDING A RESPONSE TO THE CONSISTENCY OF PAPERMAKING STOCK
Ernest A. Pelrier, Waterville, Maine
Application March 6, 1943, Serial No. 478,220
13 Claims. (Cl. 137—78)

1. That improvement in methods of controlling the consistency of a stream of paper-making stock, comprising the steps of creating a continuous flow of said stock, restricting a portion of the stream so produced, imposing a resistance to such flow substantially throughout the cross-sectional area of a portion of the length of the restricted section of the stream and thereby producing changes in the head of stock in another part of said stream, which head varies with changes in the consistency of the stock, effecting an increase in the imposed resistance in accordance with decreases in said head and vice versa, and so coordinating the rate of supply of stock to said stream with the rate of discharge of the stock and the resistance imposed on its flow between said supply and discharge that said head of stock will be maintained at a fixed value so long as the consistency of the stock remains at a fixed value.

3. That improvement in methods of controlling the consistency of a stream of paper-making stock, comprising the steps of creating a controlled rate of flow of said stock, restricting a portion of the stream so produced, imposing a resistance to such flow substantially throughout the cross-sectional area of a part, at least, of the length of said restricted section of the stream, which resistance cooperates with said controlled rate of flow to produce changes in the head of stock in a part of said stream varying inversely with changes in the consistency of the stock, the rate of supply of stock to said stream, the resistance imposed on its flow, and the discharge of said stream being so coordinated that said head of stock remains constant so long as the consistency of the stock remains constant and utilizing said changes in head to extract water automatically from said stock at a fixed level where the rate of extraction varies with said changes in head.

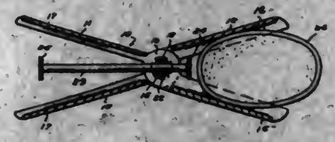


2,444,669
SUPPORT FOR SUBMERGED AREA SURVEYING
Jack Critz Pollard and Clemille Franklin Sellers, Houston, Tex., assignors to Robert H. Ray Co., a partnership
Application March 10, 1945, Serial No. 582,102
4 Claims. (Cl. 248—165)

1. A support for a geophysical instrument for water covered areas comprising, a frame, spaced clamping means about said frame, a vertical support in each of said means, whereby the frame is vertically adjustable on the supports, a support assembly for each of said supports, each of said assemblies comprising a plurality of uprights having their bases engaging the submerged surface at spaced points and extending convergingly upwardly toward a point proximate one of said supports, and additional clamping means interconnecting the uprights and support at each assembly whereby the frame is suspended upon the assemblies.

2,444,670
METHOD AND APPARATUS FOR FORMING INTERNAL-COMBUSTION ENGINE FUEL CHARGES
Roscoe C. Porter, Arlington, Va., assignor, by mesne assignments, to The Briggs Filtration Company, Bethesda, Md., a corporation of Maryland
Application October 23, 1944, Serial No. 559,923
17 Claims. (Cl. 123—25)

1. A method of forming the fuel charge for an internal combustion engine comprising introducing liquid hydrocarbon into the main air stream in the induction system of said engine, positively introducing heated aqueous fluid into said air stream concurrently with the liquid hydrocarbon, and controlling the introduction of the aqueous fluid in accordance with changes in pressure in the intake manifold of said engine whereby the



aqueous fluid will be introduced when the pressure in the intake manifold of the engine is high.

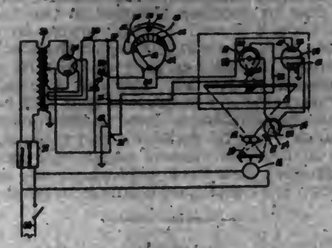
2,444,671
LIQUID TREATMENT TANK WITH SLUDGE REMOVAL MEANS THEREFOR
Frank D. Prager, Chicago, Ill., assignor to Graver Tank & Mfg. Co. Inc., a corporation of Delaware
Application November 4, 1944, Serial No. 561,997
7 Claims. (Cl. 210—16)

1. A liquid treatment tank comprising a substantially flat, circular bottom; a wall upstanding from a peripheral part of said bottom, the diameter of said wall being considerably greater than the height thereof; a single, substantially flat partition horizontally installed between said bottom and the top of the tank to separate a lower flocculation chamber from an upper clarification chamber, said partition being completely spaced from said wall and being centrally apertured to allow communication between said chambers through a large, annular, peripheral opening which is continuous and unobstructed, and a smaller, central opening; a ring of upright posts resting on said bottom and supporting said partition, the diameter of said ring being considerably smaller than that of said bottom and wall; liquid impeller means to maintain a closed liquid circulation through said chambers and openings; a sludge scraper assembly comprising a structural member downwardly extending through said peripheral opening, sludge scraper means carried by said structural member in said clarification chamber above and adjacent said partition, additional sludge scraper means carried by said structural member in said flocculation chamber above and adjacent said bottom outside said ring of posts, and means to slowly rotate said sludge scraper assembly about the vertical centerline of the tank, whereby said structural member will travel along said unobstructed peripheral opening; inlet means to discharge liquid to be treated and any required reagents into said liquid circulation; liquid outlet means at the top of said clarification chamber; and sludge outlet means in the path of at least one of said sludge scraper means.

2,444,672
DIAPHRAGM APPLICATOR
Marion W. Prather, Phila, Calif.
Application July 19, 1946, Serial No. 684,657
1 Claim. (Cl. 128—127)

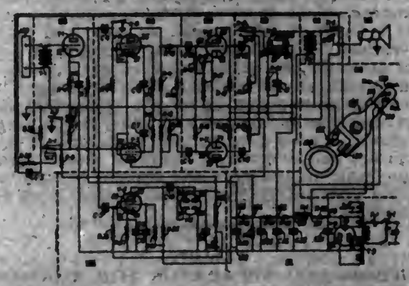
In a vaginal diaphragm applicator including a pair of diaphragm engaging arms, a pivot pin connecting said arms together, said pin being formed with a transverse aperture, an ejector rod slidable in said aperture and disposed between said arms, and an ejector plate at one end of said rod, said plate having a concave surface adapted to engage the diaphragm.

2,444,673
GUIDE FOR CORRECTING TYPEWRITING
Robert L. Pyner, Roselle Park, N. J.
Application February 6, 1945, Serial No. 576,495
2 Claims. (Cl. 197—190)



2. A typewriter having fastened to its line scale on only one side of the printing point, a guide consisting of a piece of transparent sheet material having at least one opaque symbol marked thereon, the location of said guide being adjusted so that said symbol marked on said guide coincides exactly both vertically and horizontally with letters typed on paper in the typewriter.

2,444,674
MULTIPLE LIGHT BAFFLE BRIGHTNESS METER FOR PHOTOELECTRIC EXPOSURE DETERMINING DEVICES
Karl Rath, New York, N. Y.
Application November 13, 1943, Serial No. 510,110
4 Claims. (Cl. 88—23)



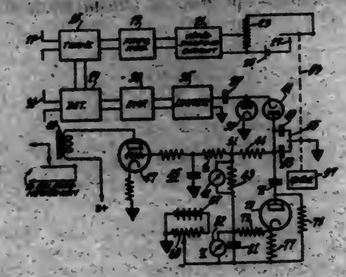
1. In a photographic exposure determining device of the type comprising a photoelectric brightness meter and means for utilizing the response thereof for determining the exposure adjustment of a camera, said meter comprising first photoelectric means having acceptance angle limiting means encompassing a scene to be photographed in the measuring position of said meter, second photoelectric means having acceptance angle limiting means of lesser angular spread than and in relatively fixed relation to said first acceptance angle limiting means to encompass a centrally positioned predetermined fractional area of said scene, view finder means for indicating the relative scene areas encompassed by both said first and second acceptance angle limiting means, a current responsive means, and means for shunting both said photoelectric means in like polarity relation across said current responsive means.

2,444,675
EXPOSURE TIME CONTROL FOR PHOTOGRAPHIC PRINTING APPARATUS
Karl Rath, New York, N. Y.
Application July 19, 1945, Serial No. 605,908
11 Claims. (Cl. 88—24)

1. In a photographic printing apparatus, a light source for exposing a transparency to be printed, photoelectric means fixedly mounted and adapted to produce a first current varying in proportion to the total integrated density of said transparency, further photoelectric means adjustably mounted to produce a second current varying in proportion to the density of a selectable fractional portion of said transparency, and means for additively combining said first and second currents and translating the combined currents into terms of exposure time of said source to insure a correctly exposed print from said transparency.

2,444,676
SOUND RECORDING AND REPRODUCING CONTROL SYSTEM
Frederick W. Roberts, Fairfield, and Roger C. Curtis, New Haven, Conn., assignors to Dictaphone Corporation, New York, N. Y., a corporation of New York
Application December 29, 1944, Serial No. 570,280
8 Claims. (Cl. 179—100.4)

1. In sound recording and reproducing apparatus, the combination of, a source of signal to be recorded, an electronic tube amplifier, recorder means, a record medium, reproducer means, loudspeaker means, positioning means for putting said recorder means in operative relation to said record medium when in one position, for putting said reproducer means in operative relation to said record medium when in another position, and for moving both said recorder and said reproducer means out of operative relation to said record medium when in a neutral position, relay means connecting said signal source to the input of said amplifier and connecting the output of said amplifier to said recorder means during recording when in one position, and connecting said reproducer means to the input of said amplifier and connecting the output of said amplifier to said loudspeaker means when in an alternate position during reproducing, biasing means for holding said relay means in one position, solenoid means for moving said relay means to its alternate position when energised, a power supply for energizing said amplifier, said solenoid and an impedance of approximately equal value connected in series in one supply line from said power supply to said amplifier, switch means for short-circuiting said solenoid in response to movement of said positioning means to one position, for short-circuiting said impedance in response to movement of said positioning means to its other position, and for leaving both said solenoid and said resistor in said power supply circuit when said positioning means is in its neutral position, whereby the power supplied to said amplifier is reduced during standby periods when the apparatus is neither recording nor reproducing.



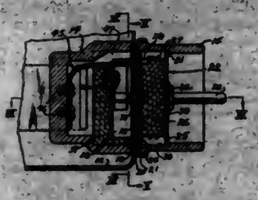
2,444,677
FLOW CONTROL DEVICE
Robert A. Rosenblum, Chicago, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application December 14, 1946, Serial No. 716,245
7 Claims. (Cl. 138—45)

2. A flow control device comprising a housing having a passageway extending therethrough, a fixed orifice-defining member extending into said passageway, an elastic washer supported on said member to deflect under the influence of pressure for defining a compensating orifice between the washer and housing, and ports joining the fixed and compensating orifices downstream from the washer.

2,444,678
RADIO BOMB RELEASE SYSTEM
Reyden C. Sanders, Jr., Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 2, 1944, Serial No. 524,796
4 Claims. (Cl. 343—7)

1. The method of providing response to a predetermined relationship between speed and distance with respect to a reflecting object, including the steps of transmitting a frequency modulated signal to said object, receiving said signal after reflection, combining said received signal with said transmitted signal to produce a beat signal, deriving from said beat signal a voltage substantially proportional in instantaneous magnitude to the frequency of said beat signal, separating the A.-C. component of said voltage from the D.-C. component thereof, rectifying said A.-C. component, combining said rectified A.-C. component in opposing polarity with said D.-C. component to produce a resultant voltage, and producing a response upon the attainment by said resultant voltage of a predetermined magnitude.

2,444,679
MAILBOX
Arthur J. Shaukis, Haverhill, Mass.
Application November 30, 1945, Serial No. 631,799
1 Claim. (Cl. 232—35)



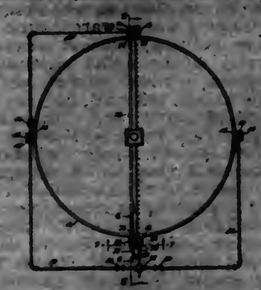
In a mail box, the combination, which comprises, a relatively thin box-like casing having front and rear sections with a hinged door in the front section, the upper surface of the said front section sloping downwardly and having a letter receiving slot therein, a continuous lid with upwardly extending flanges at the ends and an extending finger piece at the front positioned on said downwardly sloping surface at the upper end of the said front section, a transversely disposed flat sided shaft having round ends rotatably mounted in the upper end of the rear section of the casing, the flanges at the ends of said lid having extending ears positioned on the round ends of the shaft providing mounting means for the lid, an inverted tray-like cap fixedly mounted on said shaft and positioned to overlie said lid wherein upward movement of the lid raises the cap to substantially vertical position to expose the interior thereof, and a flat spring mounted in the upper end of the casing to engage with one of the flat sides of the shaft frictionally holding the said cap in raised and lowered position.

2,444,680
TERMINAL SWITCH WITH THERMOSTATIC SAFETY RELEASE
Donald Wentworth Scofield, Detroit, Mich., assignor to Electromaster, Inc., Detroit, Mich., a corporation of Michigan
Application May 5, 1945, Serial No. 592,246
10 Claims. (Cl. 200—136.5)

1. In a thermally controlled electrical connector, a first housing member and a second housing member which comprises a connector for connection to an electrical circuit and includes rotary electrical terminal means therein, as well as spring means for rotating said terminal means, thermally responsive means associated with said first member and normally cooperating with said terminal means to hold same against rotation

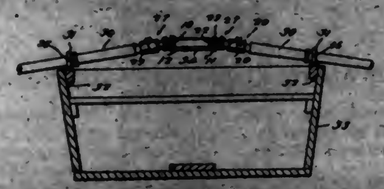
and contact means in said first member engageable by said terminal means, said thermally responsive means upon being subjected to a pre-

determined temperature releasing said terminal means for rotation by said spring means to disconnect said terminal means from said contact means.



2,444,681
CULINARY UTENSIL
Fassett Gatewood Shrout, Harriman, Tenn.
Application May 7, 1946, Serial No. 667,934
6 Claims. (Cl. 294—8)

1. A culinary utensil of the class described, comprising in combination, a one-piece wire-like rod coiled medially of its length and providing a pair of relatively adjacent, resilient arms, said arms constituting an actuating handle, a substantially flat platform, an angulated portion at one end of said platform forming an upstanding bracket, a further bracket on said platform and spaced from said first mentioned bracket, the free end of one of said arms being doubled under itself and being rotatably journaled in said brackets, the free end of the remaining of said arms being pivotally connected to said first mentioned bracket, the pressing together of said arms causing the rotation of said platform about said doubled portion of said arm, and means for restricting the extent of said rotation.



2,444,682
OVERFLOW CONTROL FOR FILTER BEDS
Luther L. Smith, Warner Robins, Ga.
Application March 30, 1945, Serial No. 585,593
2 Claims. (Cl. 210—7)

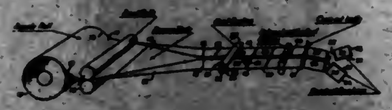
1. In a trickling filter basin having a relatively large open shallow area adapted to hold a filter aggregate with the upper surface of the aggregate spaced from the upper edge of the basin, and having a false bottom with a centrally disposed drainage channel thereunder, the combination, which comprises wells disposed at opposite ends of said drainage channel positioned beyond the boundary of the basin, a plurality of weirs positioned around said basin communicating with the interior thereof, the tops of said weirs positioned above the upper surface of the aggregate and below the upper edge of the basin, gates in said weirs, catch basins communicating

with said weirs, a shear gate in the well at the lower end of said drainage channel, a discharge connection leading from the shear gate, and overflow connections from the catch basins to said discharge connection.

2,444,683
APPARATUS FOR OPERATING TWO OARS WITH ONE HAND
John G. Saip, Lamar, Mo.
Application January 7, 1947, Serial No. 720,576
6 Claims. (Cl. 9—24)

6. A device for operating two oars of a row boat with one hand including a hand-grip, universal joints on both ends of the hand-grip, and means for connecting the hand end of an oar to each universal joint, the hand-grip comprising two tubular members arranged telescopically in each other, a bar in each tubular member extending diametrically thereof and arranged adjacent its outer end, a helical spring extending through said tubular members and secured to the two bars, a cap secured to the outer end of each tubular member and the universal joint or the like attached to the outer end of each cap and a cylindrical member on each universal joint or the like adapted to receive and hold the hand end of an oar which is movably arranged in the annular head of a thole pin rotatably mounted on a row boat and a tubular hand hold slidably surrounding the outer tubular member.

2,444,684
EXPANSIBLE LINKAGE FOR BRACELETS AND WATCH BRACELETS
Joseph J. Vastano, East Providence, R. I., assignor to F. & V. Manufacturing Co., Inc., East Providence, R. I., a corporation of Rhode Island
Application March 8, 1946, Serial No. 653,057
2 Claims. (Cl. 59—79)

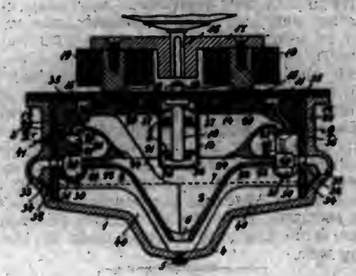


1. Expansible linkage for bracelets and the like comprising a series of articulated link elements arranged in pairs, the link elements of each pair being pivotally connected at their centers in crossed relation and the link elements of adjoining pairs being pivotally connected at their ends, said link elements each comprising a back section and a cover section secured to the back section, said back section being of shallow curved cross-sectional contour, and said back section being surrounded by an outwardly inclined margin which curves into the main body of the back section, said cover section having a plurality of integral flanges projecting from its edge and embracing the inclined margin of the back section to secure the cover section to the back section, apertures adjacent the ends and at the center of the back section, pivot elements having heads at opposite ends extending through said apertures and securing the link elements together, said apertures being substantially larger

in diameter than the shanks of the pivot elements and the shanks between the opposite heads being sufficiently longer than the combined thickness of the material of the link back sections interconnected thereby, and not less than the combined depth of said interconnected back sections, as to constitute a lost motion connection, whereby the link elements may move axially of the pivot elements and tilt relative to one another when the linkage is subjected to appreciable twisting without causing the link back elements to bend or rupture, the contour of the back link sections reinforcing the same against bending in the area thereof adjacent the central pivot when the linkage is twisted beyond the operative limits of the lost motion connection between the back link sections and the central pivot elements.

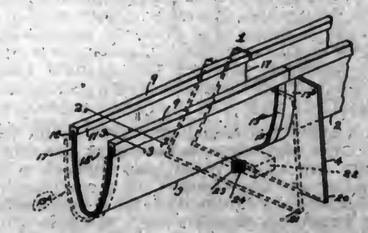
3. An apparatus train for forming flat-folded bag envelopes, comprising in supply roll, means for withdrawing a continuous web from the supply roll, a former plate disposed forwardly of the feed rolls, and including means to fold the edges of the advancing web inwardly of the plate to define a pair of marginal folds having a continuous bottom and a longitudinal top gap; non-rotary heat sealing means disposed transversely of the path of the advancing web, and intermittently operative to impose a spaced series of a plurality of adjacent transverse heat seals on the advancing web and define a continuous web of a series of joined pairs of envelope pockets; slitting means operative along the longitudinal slot to divide the web longitudinally, and transverse-cutting means at the terminal end of the apparatus train, spaced from the heat sealing means by a distance of at least a plurality of envelope sections of the web, and intermittently operative in synchrony with the heat-sealing means and in and between the adjacent transverse heat seals of the trailing edges of the leading pair of envelope sections, to sever said pairs of envelope sections from the said leading ends of the advancing web.

2,444,685
MULTIPLE FABRICATION METHOD AND APPARATUS FOR LIQUID-TIGHT ENVELOPE BAGS
Harry F. Waters, New York, N. Y.
Application May 6, 1942, Serial No. 441,900
5 Claims. (Cl. 93—18)



1. The method of forming flat-folded envelope pouches comprising advancing a web of plural-ply thermoplastic-faced envelope material over a former plate to define two parallel rows of folded-over sections having the free edges adjacent but spaced; intermittently advancing the bi-folded web to a heat-sealing station and applying a series of spaced, transverse heat seals, in multiple, to the web, to form a continuous series of pairs of bag envelopes having a common continuous side; slitting the transversely sealed web along the central longitudinal slot to form a pair of continuous webs of joined bag envelopes, and thereafter transversely cutting the said webs a plurality of envelope-lengths ahead of the heat-sealing station and between the said several transverse seals defining the leading pair of envelopes to separate the individual envelopes simultaneously with the intermittent heat-sealing step.

2,444,686
DOUBLE ADJUSTMENT WRENCH HAVING THREAD AND RACK ADJUSTMENTS
James C. White, Richmond, Ky.
Application May 19, 1945, Serial No. 594,767
2 Claims. (Cl. 81—147)



1. In a quick-set wrench having a shank with parallel sides and edges, a handle at one end, a stationary jaw at the other, and threads in the edges adjacent the handle, the combination, which comprises, a carriage having a longitudinal opening extending therethrough through which the said shank extends, said carriage having oppositely positioned ratchet teeth in the opposite edges thereof, a movable jaw slidably mounted on the carriage having oppositely positioned pawl elements in the opposite faces thereof positioned to coact with the ratchet teeth of the carriage to hold the movable jaw in adjusted positions thereon, resilient means urging the movable jaw to operative position, and a nut on the threaded portion of the shank engaging the end of the carriage for minute adjustment of the jaw.

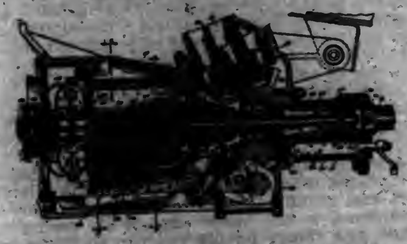
2,444,687
PERIODIC CIRCUIT BREAKER WITH A LIQUID CONDUCTOR PARTICULARLY FOR CONTACT CURRENT CHANGERS
Marius Hugo Wilhelm Widakowich, Stocksund, Sweden
Application April 6, 1945, Serial No. 586,914
In Sweden April 8, 1944
5 Claims. (Cl. 200—32)

1. Periodic circuit breaker with a circulating contact liquid, particularly for contact current changers, characterized in that the circulation system comprises a stationary outer receptacle and a rotating inner receptacle serving as a circulation pump, said receptacles being provided with ejecting nozzles for the contact liquid, so arranged that the contact liquid is divided during its circulation into a system of rotating jets and a system of stationary jets, the rotating jets discharged from the ejecting nozzles of the inner receptacle being adapted periodically to make contact with the stationary jets discharged from a number of mutually insulated ejecting nozzles in the outer receptacle.

2,444,688
FLUME
Winfred E. Wilson, North Hollywood, Calif., assignor of one-half to Nina Mae Wilson
Application September 17, 1945, Serial No. 616,737
5 Claims. (Cl. 61—14)

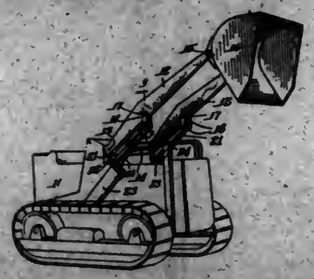
1. In means of the character disclosed, a flume section formed of plywood, longitudinal members carried on said section and functioning to increase the thickness of the section along edges thereof, and extending along the inside of the flume, and a liner within said plywood section and maintained in position by said longitudinal members.

2,444,689
METHOD OF INCREASING THE PARTICLE SIZE OF SYNTHETIC RUBBER LATEX AND FORMING A FILM THEREFROM
Edward A. Willson, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application June 7, 1943, Serial No. 489,986. In Canada April 21, 1943
2 Claims. (Cl. 18—58.4)



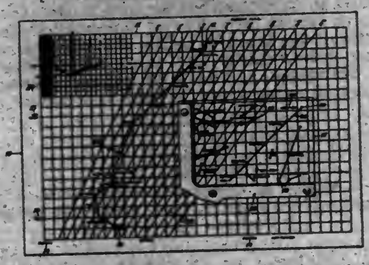
1. The method of producing a synthetic rubber deposit directly from a synthetic rubber latex prepared by the polymerization, in an aqueous emulsion containing an acid and alkali stable emulsifying agent, of a mixture of butadiene-1,3 and a monoethylenic compound copolymerizable therewith in aqueous emulsion, the said mixture containing at least 50% by weight of butadiene-1,3, which method comprises adding to said latex a dilute aqueous solution of an ionizable water-soluble salt composed of a monovalent cation of a water-soluble base and an anion of a water-soluble acid having a dissociation constant not less than 1×10^{-6} and being selected from the class consisting of water-soluble inorganic acids and water-soluble organic acids containing not more than six carbon atoms, in an amount insufficient to effect irreversible coagulation of the latex, said amount being from 0.1 to 1% by weight based on the latex, heating the latex to a temperature of 50 to 100° C. for about two hours whereby substantially to increase the size of the synthetic rubber particles in the said latex, and dipping a form coated with a coagulant in the salt-treated latex whereby to obtain a strong coherent film of synthetic rubber deposited on the form.

2,444,690
BURIAL VAULT TRANSPORTING AND LOWERING APPARATUS
Charles E. Almendinger and Edward L. Behrens, Prospect, Ohio
Application November 23, 1946, Serial No. 711,914
7 Claims. (Cl. 214—75)



1. A vault-handling vehicle comprising a frame carried by transporting wheels, cable means for suspending and supporting a vault from said frame, and means associated with said frame for gripping the vault to prevent swinging thereof relative to the frame, said means comprising a clamping bar at one end of the frame for contacting with the associated end of the vault, and a clamping unit adjustably carried by the other end of the frame and having a clamping member adapted to be moved into contact with the associated end of the vault to clamp the suspended vault between said clamping member and said clamping bar.

2,444,691
CHANGE-SPEED MECHANISM
William B. Barnes, Muncie, Ind., assignor to Barnes Motor Developments Company, Muncie, Ind., a partnership consisting of William B. Barnes and Freda Arthur Barnes
Original application June 28, 1943, Serial No. 491,284. Divided and this application January 3, 1944, Serial No. 516,782
12 Claims. (Cl. 74—331)

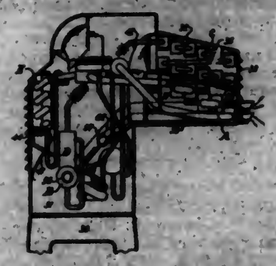


1. In a speed changing transmission, in combination, speed changing gearing including a plurality of speed changing gears axially aligned and having a center bore therethrough, a plurality of countershafts disposed about the axis of said gears and having formed thereon axially disposed cone shaped wedges, a plurality of countershaft gears carried by said countershafts each of said gears having an internal bore corresponding to one of said cone shaped wedges, and means for forcing said wedges into said cone shaped bores for locking the gears to the countershaft, said countershaft gears comprising the sole support for said speed changing gears against transverse movement relative to their axes.

2,444,692
TRACTOR SHOVEL
Ralph L. Beyerstedt, Libertyville, Ill., assignor to The Frank G. Hough Co., Libertyville, Ill., a corporation of Illinois
Application December 12, 1946, Serial No. 715,871
1 Claim. (Cl. 214—140)

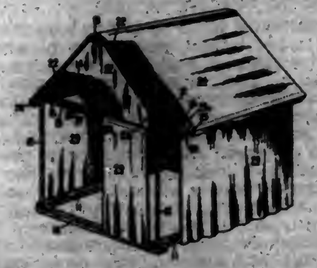
In the known type of tractor-shovel having a shovel mounted on an end portion of a boom horizontally fulcrumed at its other end portion on the tractor for swinging movement of the boom and shovel in a vertical plane, an hydraulic-cylinder, piston and piston-rod horizontally hinged at a fixed point on said tractor for rocking movement in a vertical plane, means to admit fluid under pressure into said cylinder and to discharge it therefrom to operate said piston, and means operatively connecting the piston-rod to said boom, the novel improvement in said piston-rod connecting means including the combination of a first vertical link, means hinging said link at its upper portion on said boom at a point intermediate the length of the latter, a second link, means hinging said second link horizontally at an end portion thereof on said tractor directly below the fulcrum of said boom, means hinging said second link to said first link directly below the hinge of the latter on said boom and at a distance therefrom the same as that between the boom fulcrum and said second link hinge on the tractor, thereby forming a parallel-motion mechanism, and means hinging said piston-rod to said two links coaxially with the means hinging them together, said first link remaining always vertical during its entire movement with the boom to obtain the desired functional advantages of such verticality.

2,444,693
AIRCRAFT LOAD CALCULATOR
Charles F. Comstock, Hagerstown, Md.
Application February 16, 1943, Serial No. 476,039
3 Claims. (Cl. 346—146)



1. A calculator for determining load effect with respect to the weight and center of gravity of a craft, comprising a plotting board for receiving a chart having a gross weight scale, a moment scale in inch-pounds, and percentage lines denoting mean aerodynamic chords, and a transparent template having linear markings corresponding in length and inclination to the weight and location of load items affecting the weight and center of gravity of said aircraft, said template further having holes therethrough corresponding to said markings and adjacent thereto for marking the chart in accordance with the length and inclination of said linear markings, said template being cooperable with said chart and adjustable relatively to said board while maintaining the relative position of said linear markings with respect to the board for the purpose of marking said chart to indicate the gross weight and the location of the center of gravity of said craft in any loaded and partially loaded condition.

2,444,694
ABSORPTION TYPE PORTABLE AIR CONDITIONING UNIT
Curtis C. Coons, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application November 16, 1942, Serial No. 465,685
7 Claims. (Cl. 62—129)



5. Air conditioning apparatus comprising a housing structure including means forming a passageway for air to be conditioned and means forming a passageway for air to and from the exterior of the space to be conditioned; a heat operated air conditioning system associated with said casing including heat transfer parts in each of said air passageways and a part to be heated positioned in said housing outside said air passageways; a combustible fuel burner for heating said heated part; a protective structure sealed

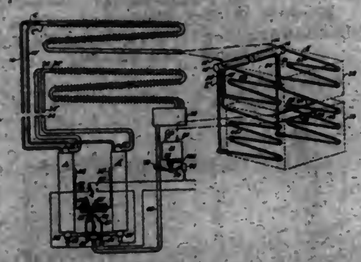
from both said air passageways enclosing said fuel burner and arranged to pass products of combustion of said fuel burner in heating relationship with said heated part of said system, said sealed protective structure including means for conducting air from the exterior of the space to be con-

ditioned to said fuel burner and means for discharging waste products of combustion to the exterior of the space to be conditioned in a region having substantially the same air pressure as that prevailing at the inlet to said means for conducting exterior air to said fuel burner.

2,444,695
PLAYHOUSE
Nelson A. Crites, Columbus, Ohio
Application August 4, 1945, Serial No. 608,908
6 Claims. (Cl. 135—1)

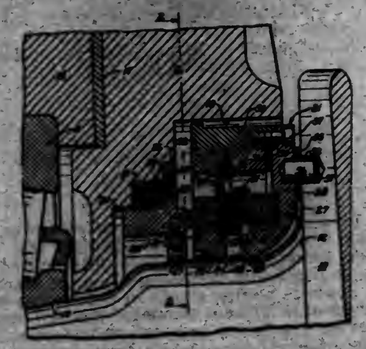
2. In a knockdown playhouse, a rectangular skeleton base frame portion, an upper skeleton frame portion spaced above the base frame portion, vertically disposed corner posts having doweled end portions detachably connecting the two frame portions together, a roof frame portion detachably mounted upon said upper skeleton frame portion and comprising a ridge pole, detachable vertically disposed kingposts connecting the ridge pole and upper skeleton frame portion, and rafters detachably connecting the ridge pole, kingposts, and upper frame together, flexible means for connecting adjacent upper ends of the rafters together and providing sockets for receiving and supporting the ridge pole, said rafters having doweled upper and lower end portions adapted to detachably fit within sockets formed in said ridge pole, flexible means for detachably connecting the lower end portions of the rafters to said upper skeleton frame, and a detachable fabric roof cover for said roof frame portion having hems formed along its longitudinal side edges and a reinforcing wood member located in each of said hems whereby to provide means for detachably connecting the fabric roof cover to the lower ends of the rafters, said reinforcing wood members having sockets to detachably receive said doweled lower end portions.

2,444,696
ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES
Juan Carlos de la Riestra, Martin Augusto de la Riestra, and Willoughby Francisco Nixon, Rosario, Argentina
Application December 6, 1944, Serial No. 566,843
1 Claim. (Cl. 123—190)



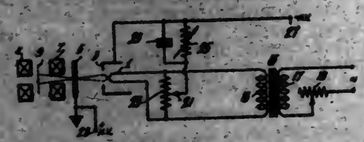
A rotary valve for internal combustion engines, comprising a dome-shaped body having a lateral port and an offset flange whose bottom face lies contiguous to the upper edge of an engine cylinder, said flange having teeth in its upper surface adapted to assist in the circulation of a lubricant pumped to the valve body when the same is rotated, a tubular neck at the crown of the dome-shaped body and having internal threads, a tubular head of larger diameter than the neck and connected therewith by a horizontal web and providing a spark plug housing, and operating means adapted to rotate said valve body with a spark plug threadedly mounted in the tubular neck of the valve body.

2,444,697
THREAD-HOLDING FINCERS FOR THE CLEANSING OF INTERDENTAL AND INTERMOLAR SPACES
Daniel Vidal Freyre, Buenos Aires, Argentina
Application September 12, 1945, Serial No. 615,784
In Argentina August 18, 1945
4 Claims. (Cl. 132—92)



1. A thread holder comprising, a hollow elongated base opening at one end, a pair of resilient outwardly diverging arms extending from the other end of the base, one of said arms having an elongated groove along its outer surface and a notch across the tip end thereof in alignment with the groove, said other arm having a threaded bore in its tip end and a longitudinal groove along a short portion of its outer surface, a threaded bolt with a notched head threaded into the bore of said last-mentioned arm, said notch in the bolt head being adapted to be turned into and out of alignment with said short longitudinal groove, said hollow bases being formed as two connected elongated bores, the first bore being relatively larger in cross-sectional diameter and shorter than the second, a spool of thread rotatably mounted therein arranged to supply a strand of thread upwardly from said first bore into the second mentioned bore and to the outside of the base upwardly along the elongated groove of the first-mentioned arm, an end cap having a socket for cooperating with a like socket in the bottom of the said first bore for rotatably mounting said spool of thread, and an elongated member with an end mounted in the inner surface of said cap and extending upward into said second bore, to thereby yieldably squeeze the strand of thread leading from the spool to the outside of the base against the interior upper portion of the second bore, whereby upon spanning the free end of said thread strand between the notch in the tip end of the first arm and the notch in the said bolt head, the arms may be pressed toward each other, and the bolt turned to thereby secure the same between the body of the bolt and the said bore into which it threads, so that release of pressure on said resilient arms causes them to return toward their normal position and provide tension on the thread strand spanned between the said arms.

2,444,698
TWO-TEMPERATURE INTERMITTENTLY OPERATING REFRIGERATOR
Alfred G. Gross, Wilmette, Ill., assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application June 5, 1943, Serial No. 489,727
12 Claims. (Cl. 62—5)



1. An absorption refrigerating apparatus comprising two intermittent absorption refrigerating units each having a generator-absorber and an evaporator, the evaporator of each unit comprising two coiled conduits in open communication with a common source of liquid refrigerant, one of said conduits being in heat exchange relation with a low temperature compartment and the other with a high temperature compartment and arranged for the circulation of liquid refrigerant through each conduit by the evaporation of the liquid refrigerant, and means for throttling the flow of liquid refrigerant through the conduit in heat exchange relation with the high temperature compartment as the temperature of that compartment approaches a predetermined minimum, said means also being constructed to stop completely such flow when the temperature of the high temperature compartment reaches said predetermined minimum.

2,444,699
ROLL-SLEEK SEAL
Sherrel A. Hastings and Charles F. Vogtech, Chicago, Ill., assignors to Crane Packing Company, Chicago, Ill., a corporation of Illinois
Application August 16, 1946, Serial No. 690,846
5 Claims. (Cl. 286—11)

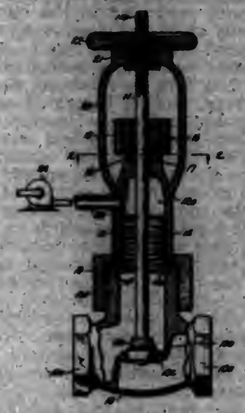
1. In a rotary seal having a washer with a radially disposed sealing surface thereon and a rigid support for the washer having an L-shaped radial cross-section, means for effecting a flexible fluid-tight seal between the washer and support comprising an apertured diaphragm having its inner peripheral region in contact with the washer, a cylinder surrounding the washer and spaced radially therefrom, said cylinder having an inwardly extending flange in contact with the one side of the outer peripheral region of the diaphragm, a spacer ring nested within the cylinder between the flange and support and contacting the other side of the outer peripheral region of the diaphragm, a gasket located between the spacer ring and support, means for drawing the flanged ring against the support to compress the diaphragm, spacer ring and gasket between the flange and support thereby to effect a fluid-tight seal between the outer peripheral region of the diaphragm and support, and means for compressing the inner peripheral region against the washer to effect a fluid-tight seal between the washer and diaphragm.

2,444,700
METHOD OF OPERATING ELECTRON GUNS
James Hillier, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 26, 1945, Serial No. 624,781
8 Claims. (Cl. 250—49.5)

1. In an electron optical system having an electron gun including a thermionic cathode and an apertured cathode lens electrode, the method of providing effective self-centering of the electronic emission of said cathode with respect to the axis of said lens aperture comprising energizing said cathode and biasing said lens electrode with respect to said cathode to provide electron beam current saturation.

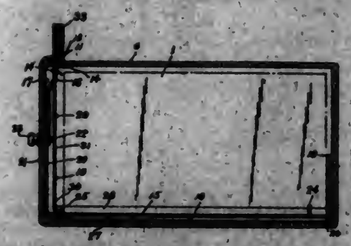
2,444,701
PIPE HANGER
John F. Ingham, Wilton, Conn.
Application August 24, 1945, Serial No. 612,357
4 Claims. (Cl. 248—62)

1. In a pipe hanger, a pair of elements each having a circular entrance opening and a V-shaped socket inwardly of said opening and also extending laterally thereof at a pair of diametrically opposite points, a tube of deformable metal entering each of said elements through the entrance of the latter and deformed laterally inwardly of such entrance whereby withdrawal of the tube is prevented.



2,444,702
MULTIPLE DIAMETER GAUGE
Stanley G. Johnson, West Hartford, Conn.
Application May 17, 1945, Serial No. 594,221
6 Claims. (Cl. 33—199)

2. A gage for gaging a plurality of diameters on a test part comprising a frame having a plurality of spaced frame bearings, mounting means carried by each frame bearing and rotatably adjustable with respect thereto, each mounting means having a pair of bearings to receive gaging means, each mounting means having one gaging means bearing concentric with the frame bearing and one gaging means bearing eccentric thereto, each concentric gaging means bearing upon one mounting means being opposite to an eccentric gaging means bearing on another mounting means, means to secure each mounting means in adjusted position, and a gaging means upon each gaging means bearing.

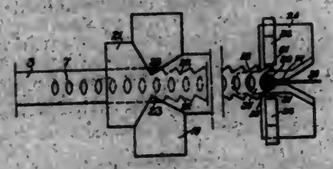


2,444,703
VALVE ASSEMBLY
Harry Roswell Jones, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Application May 22, 1944, Serial No. 536,709
7 Claims. (Cl. 251—31)

1. A valve assembly comprising a valve body, closure means in said body, a housing surmounting the valve body, an axially movable valve stem extending through the housing and into the valve body operatively connected to the closure means, means for actuating the valve stem, a sealing gland having relative movable and frictional engagement with said stem and effecting a fluid tight joint between the stem and the housing, a

bellows relatively inert to fluids traversing the valve having one end rigidly secured to partition the valve body and housing and with the other end fixedly secured to said valve stem, and means for admitting relatively noncorrosive fluid under pressure into the housing above said bellows.

2,444,704
BUTTER TRAY
Harry P. Keefer, Youngstown, Ohio
Application October 11, 1944, Serial No. 558,153
2 Claims. (Cl. 31—20)



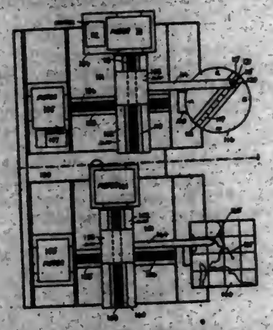
1. A butter receptacle comprising an open end compartment, a cover over the open end of the compartment, a butter supporting shelf secured to the inner side of the cover and slidably disposed within the compartment, an open frame like knife slidably disposed on the open end of the compartment, removable stop means extending into the opening of the frame like knife in the path of its lower frame member and limiting movement thereof in raised position, a resilient locking clip secured to the cover and slidably engaging the knife stop means, and removable stop means carried by the compartment and limiting outward movement of the butter supporting shelf.

2,444,705
ADJUSTABLE SHORING SUPPORT
Joseph W. Kaffer, Ligonier, Pa.
Application March 22, 1946, Serial No. 656,486
5 Claims. (Cl. 248—354)

1. An adjustable shoring device consisting of a base adapted to slidably engage a structural column provided with a central web having on its edges a series of wedge-engaging grooves, a supplemental upper portion composed of structural members, and a holding block therefor surrounding and secured to the said structural members having a wedge engageable with one of said edgewise grooves.

2,444,706
SLIDE FASTENER MACHINE
Sigmund Loew, Windsor, Ontario, Canada
Application August 12, 1944, Serial No. 549,236
In Canada July 25, 1944
5 Claims. (Cl. 153—1)

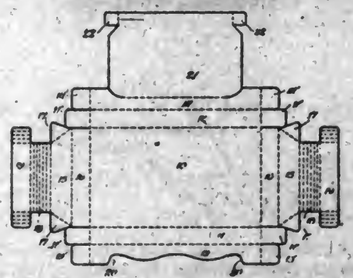
1. An automatic machine for the manufacture of slide fastener stringers in combination with a press, comprising an upper die block which is attached to the pitman of the press and a lower die block which is fixed to the table of the press, a series of upper and lower dies or punches for successively drawing an embryo cavity, serrating the edges, and punching off individual elements from a stock wire, means for clamping said elements to a standard tape, and means for feeding said stock wire to the succesdive stages in the operation comprising a sliding section which is part of the lower die block, a reciprocating finger which pushes the stock wire by engaging the embryo cavity and which is part of said sliding section, a spring in compression which presses against one end of said finger to provide engagement between the finger and embryo in the stock wire, a cam in the upper die block which engages a corresponding cam on said sliding section which retains the reciprocating finger, a compression spring between said sliding section and a fixed part of the lower die block, reciprocating



motion being provided by the action of said cam and spring, and means for controlling the extent of said motion including a threaded bolt which limits the motion of the sliding section imparted by the cam on said sliding section.

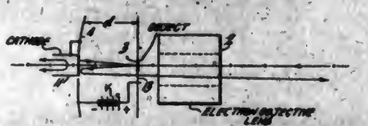
2,444,707
MECHANICAL FISH BAIT
Charles D. Mather, Essexville, Mich.
Application March 22, 1946, Serial No. 656,251
6 Claims. (Cl. 43—43)

1. A fish bait of the character described comprising, a body member to which a fish line is adapted to be attached, a vertically disposed propeller shaft mounted in the body, a crank on the upper end thereof, a propeller mounted on the lower end of the shaft, legs pivotally connected to said body member, a connecting rod, a link pivotally connecting said crank and rod, means connected to said connecting rod for actuating said legs as the propeller is driven, and hooks connected to said legs.



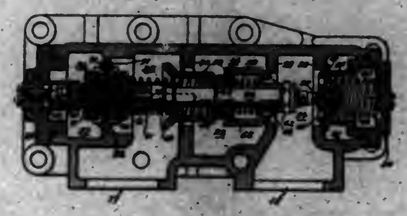
2,444,708
INSTRUMENT FOR NAVIGATION
Peter Mosner, Alexandria, Va., and Otto Steinitz, New York, N. Y.
Application November 25, 1942, Serial No. 466,934
2 Claims. (Cl. 264—1)

1. An instrument for the navigation of a vehicle, said instrument comprising a body turnably connected with the vehicle, the turning center coinciding with the center of gravity of said body; two members forming movable parts of said body and guided relative to the other parts of said body; means restricting the inert movement, in said guided direction, of one of said members to a range of different positions corresponding to different accelerations of said turning center; means to control the movement of the other member by the movement of said first member, said latter means moving said second member in a direction opposite to that of said first member whereby the common center of gravity of



said two members and consequently of said body is maintained; and means indicating the shift of one of said members which results from said movement of the member.

2,444,709
DISPLAY PACKAGE
Ersel C. Mulnix, Lake Bluff, Ill.
Application December 7, 1945, Serial No. 633,361
3 Claims. (Cl. 229—34)



1. An enclosure of the class described comprising a backing sheet; side flaps foldable, first upwardly to form side walls and then inwardly to form side ledges at the tops thereof; a securing flap at each end of said backing sheet, foldable first upwardly to form end walls and then inwardly to form end ledges at the tops thereof in cooperative alignment with said side ledges; outwardly projecting end tabs at each end of said end ledges foldable in angular relation thereto against the inner face thereof, forming eased edges in juxtaposition with the faces of said side ledges, providing a pocket at each corner of said enclosure; a securing flap at each end foldable in juxtaposition with said foldable end tabs; and a T-head at each end foldable in parallel alignment with each end wall in locked position.

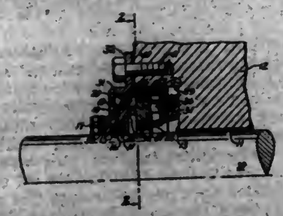
2,444,710
CORRECTION FOR SPHERICAL AND CHROMATIC ABERRATIONS IN ELECTRON LENS
Edward G. Ramberg, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application September 26, 1942, Serial No. 459,814. Divided and this application September 27, 1945, Serial No. 618,970
6 Claims. (Cl. 250—49.5)

1. In an electron beam focusing system for imaging an object including an electron lens and a decelerating electric field, the method of correcting simultaneously for spherical and chromatic aberrations comprising adjusting the depth of said field to have a predetermined relation to the focal length of said lens, irradiating said object, subjecting electrons reflected from said object to said field to again reflect said electrons and to derive an electronic image having aberrations of equal value and opposite sign to the aberrations of said lens, and focusing said reflected electrons by said lens to form a corrected image of said object.

2,444,711
OIL TEMPERATURE CONTROL VALVE
Joe C. Shaw, Racine, Wis., assignor to Young Radiator Company, Racine, Wis., a corporation of Wisconsin
Application June 9, 1945, Serial No. 598,535
8 Claims. (Cl. 236—34)

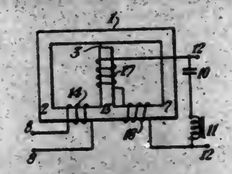
1. An oil temperature-regulating valve mechanism comprising, a housing adapted for attachment to a heat exchange unit having dual oil flow paths, said housing having a main oil inlet and a pair of main oil outlets, said housing also having an associate oil outlet for communication with a common inlet to the dual oil flow channels in said heat exchange unit and a pair of associate inlets for communication with the oil outlets from said heat exchange unit, said housing being interiorly partitioned to provide a plurality of chambers certain of which communicate respectively with certain of said inlets and outlets, said partitions having openings formed therein affording communication between the chambers on opposite sides of a respective partition, valve mechanism axially movable in said housing co-acting with said partition openings to control the flow of oil between said housing main oil inlet and one of said housing main oil outlets either directly through said housing or indirectly through said heat exchange unit, a thermostat connected to actuate said valve mechanism, said thermostat being mounted in said housing for exposure to the oil flow through one of said housing main outlets in advance of its discharge therefrom whereby the temperature of the oil determines the flow path through said housing, and a partition movable with said thermostat and separating the housing chambers which communicate with said housing main outlets.

2,444,712
LIGHT POLARIZING POLYVINYL ORTHOBORATE FILMS
Frank Kerr Signaigo, Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 6, 1945, Serial No. 603,583
7 Claims. (Cl. 88—65)



1. A light polarizer consisting of a sorption complex of a dichroic stain on molecularly oriented solid polyvinyl orthoborate, said polyvinyl orthoborate containing at least 4% boron.

2,444,713
PRESSED-IN PACKAGE TYPE ROTARY SEAL
Archie J. Selari, Chicago, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois
Application September 7, 1946, Serial No. 695,399
8 Claims. (Cl. 286—11)

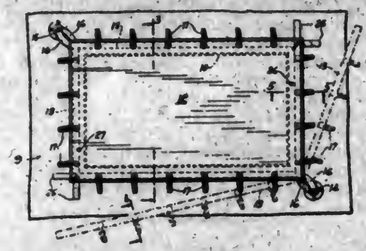


1. A self-contained seal device for effecting a fluid-tight seal between relatively rotatable elements, one of said elements having an annular recess therein, said seal comprising a sealing ring encircling the other of the relatively rotatable elements, said ring having a recess opening upon the other relatively rotatable element, packing means in the recess and compressed between the ring and other relatively rotatable element to effect a fluid-tight seal therebetween, a collar likewise encircling the other element and having one end abutting on the packing to retain the packing in the recess, a sleeve on the said other element, an annular groove on the exterior of the sleeve, a tube in the recess of the said one relatively rotatable element, means for effecting a fluid-tight seal between the tube and the walls of the recess, means for effecting a fluid-tight seal between the tube and ring, and a radially inwardly disposed abutment carried by the tube and extending into the groove in the sleeve to limit relative axial movement between the tube and sleeve in at least one direction.

2,444,714
PACKAGE-TYPE SEAL
Charles F. Voytech, Chicago, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois
Application September 7, 1946, Serial No. 695,439
12 Claims. (Cl. 286—11)

1. A self-contained seal device for effecting a fluid-tight seal between relatively rotatable elements, one of said elements having a recess therein, said seal comprising a ring encircling the other of the relatively rotatable elements, means for sealing the ring with respect to the encircled element, a radially extending flange on the ring, said flange having a sealing surface on one side, means for preventing relative axial movement between the ring and the element encircled thereby; an apertured plate encircling the ring, said aperture being of smaller diameter than the outside diameter of the flange and adapted to contact the side of the flange opposite the sealing surface, a recess in the plate, a tube in the recess in the plate and sealed with respect to the plate, a resilient compressible sealing element having a cylindrical wall in contact with a portion of the tube and adapted to be compressed against the tube, a sealing washer within the tube and having a sealing surface adapted to bear against the sealing surface on the flange of the ring, means for effecting a fluid-tight joint between the washer and sealing element, means for preventing relative rotation between the washer and tube, and resilient means for urging the washer toward the ring.

2,444,715
VOLTAGE REGULATING TRANSFORMER
Alec Hervey Bennett Walker, London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application September 5, 1946, Serial No. 695,028
In Great Britain August 17, 1945
4 Claims. (Cl. 323—56)



1. Voltage regulating apparatus for an alternating current circuit of the kind described, in which a single transformer is provided comprising a primary winding on a magnetic core having partially separate magnetic flux paths one of which is operated at a relatively high flux density sufficient to cause wave form distortion and the other is operated at a low flux density, said apparatus comprising a main secondary winding on that portion of the magnetic core operated at a high flux density, a compensating winding connected in series opposition to said main winding on that portion of the magnetic core operated at a low flux density, and a filter comprising an inductance and a condenser tuned to series resonance at the third harmonic frequency of said alternating current effectively connected across said windings, the proportions of said filter being such that at the fundamental frequency of said alternating current said filter acts as a tuning condenser for said main winding of such a value that the current through said filter cooperating with the magnetizing current in said main winding serves to stabilize the voltage delivered by said apparatus.

2,444,716
CLOSURE FASTENER
James J. Xenakis, Chicago, Ill.
Application May 26, 1947, Serial No. 750,429
9 Claims. (Cl. 292—17)

1. Latching means for a closure plate positioned on a flanged support comprising a plurality of levers arranged adjacent marginal portions of the plate when in latching positions and together framing the plate perimeter, pivotal means for one end of each lever whereby the levers can be swung individually away from and toward the respective portions of the margin of the plate, and a plurality of spring clamping members on each lever movable successively into clamping relation

with the respective portions of the plate margin and corresponding adjacent portions of the

flanged support as the levers are moved to the respective latching positions.

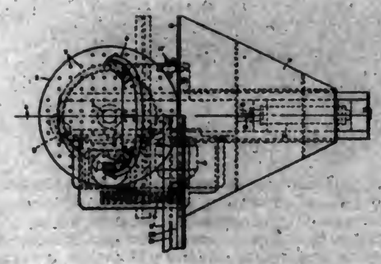
2,444,717

MEANS OF INFLATION

Frank B. Allen, Verona, N. J., assignor to C-O-Two Fire Equipment Company, Newark, N. J., a corporation of Delaware

Application January 11, 1944, Serial No. 517,895
2 Claims. (Cl. 9—2)

1. A distributing device for inflating two compartments comprising a manifold block provided with inflating CO_2 fluid and air distributing bores the ends of which are provided with valve chambers, valves closing the ends of said bores, and nozzles in communication with the valve chambers for the inflating fluid, said block being ported to connect the valve chambers for the valves controlling the air distributing bore to regions at the bases of said nozzles.



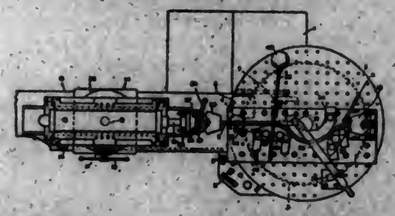
2,444,718

CONTOUR FORMING MACHINE HAVING A PIVOTED BENDER WITH METAL BLANK ATTACHED

Cyril J. Bath, Chagrin Falls, Ohio, assignor to The Cyril Bath Company, Cleveland, Ohio, a corporation of Ohio

Application June 2, 1945, Serial No. 597,305
3 Claims. (Cl. 153—40)

1. In a contour forming machine, the combination of a rotatable table, a laterally facing die of non-circular contour carried by said table and constituting a substantial replica of the finished workpiece, driving means for rotating said table and the die carried thereby, a second elongated die movable endwise transversely of the axis of said table and tangentially of said first die in all relative positions of the dies, pressing means yieldably urging said dies toward one another, and intergearing between said dies operative when said table and first die are rotated by said driving means to effect transverse movement of said second die in predetermined relation to the rotation



of the first die, whereby such rotation and transverse movement of said dies can effect progressive wrapping of a workpiece blank clamped to said first die around said first die.

2,444,719

METHOD AND APPARATUS FOR CONTOURING ELONGATED METAL STOCK WHILE UNDER TENSION

Cyril J. Bath, Cleveland, Ohio

Application October 5, 1946, Serial No. 701,602
6 Claims. (Cl. 153—40)

1. The method of contouring elongated metal stock comprising anchoring one end of the stock, continuously applying tension to the entire length of the stock and concurrently repeatedly swinging the stock from one end transversely of its length across a predetermined path while maintaining the stock under tension, and interposing die blocks one at a time alternately on opposite sides of the stock progressively from the point of anchorage toward the opposite end of the stock in the path of swinging movement of the stock between reversals in the direction of swing of the stock, and maintaining all of the die blocks between the point of anchorage and the last inserted die block in fixed contact relation to the stock.

4. In a contouring device, a support, a plurality of dies thereon defining in one position a serpentine path for stock to be contoured therebetween, means for tensioning the stock and concurrently swinging the stock transversely of and laterally beyond the said path in opposite directions successively, means supporting the dies

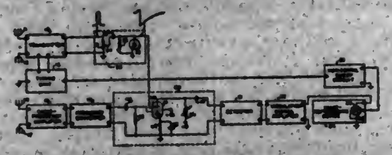
individually for selective movement into and out of the path of the swinging stock, means on the support operatively detachably engageable with the dies, respectively, for securing the dies in said one position, selectively, when the dies are moved into said position.

2,444,720

MANUFACTURE OF LITHIUM BASE GREASES

James Alfred Bell, Fetcham, Leatherhead, England, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application October 17, 1945, Serial No. 622,933. In Great Britain October 17, 1944
13 Claims. (Cl. 252—41)



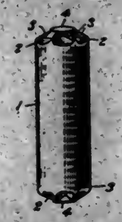
1. In a process of manufacturing a lubricant containing a lithium soap, the improvement consisting essentially of intimately contacting a quantity of a free soap-forming acid containing at least sixteen carbon atoms in the molecule in solution in a lubricating oil with an approximately equivalent quantity of a saponifying agent of the group consisting of lithium oxide, anhydrous lithium hydroxide, lithium hydroxide and its hydrates at a temperature of between about 35° and 45° C. for a time sufficient to react at least 90% by weight of one of said lithium compounds and said acid to form a soap.

2,444,721

WAVE-SIGNAL TRANSLATING SYSTEM

Harold L. Blaisdell, Little Rock, N. Y., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application March 21, 1944, Serial No. 527,406
9 Claims. (Cl. 343—13)



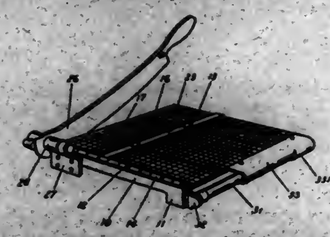
1. A wave-signal translating system comprising, means for transmitting wave signals to a point, the relative distance of which from said transmitting means may vary, means including at least one stage of amplification for receiving from said point related wave signals having amplitudes varying with the distance between said receiving means and said point and which may vary with the field intensity of said transmitted wave signals, means responsive to the field intensity of said transmitted wave signals for deriving independently of the translation of wave signals by any stage of amplification of said receiving means which may become overloaded during the normal operation thereof a control effect having a value dependent on the field intensity of said transmitted wave signals and varying approximately exponentially with time from approximately the time of transmission of said wave signals and which approaches a limiting value after a time approximately corresponding to that required for the transmission of said wave signals to a predetermined point and for receiving said related wave signals from said predetermined point, and means responsive to said control effect for controlling the sensitivity of said receiving means to provide therein substantially a predetermined sensitivity for said related wave signals at the time said related wave signals are received from any distance in response to said transmitted wave signals.

2,444,722

END CLOSURE FOR TUBULAR CONTAINERS

Boris Bogoslowsky, Jackson Heights, N. Y.

Application February 7, 1945, Serial No. 576,662
2 Claims. (Cl. 229—5.5)



1. An end closure for a container having a tubular body portion, said closure comprising a plurality of spaced shoulder portions extending inwardly from said body portion to the center thereof and alternating with a plurality of spaced radial pleats extending outwardly from the center thereof, the central portions of said pleats, containing all of the end edges of said tubular blank, being flattened and heat sealed in the form of a disk spaced from said shoulder portions and lying in a plane substantially perpendicular to the axis of said tubular body portion.

2,444,723

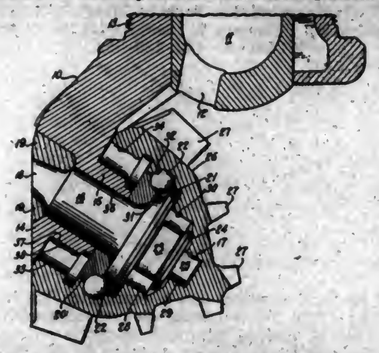
MEANS FOR ILLUMINATING AND TRIMMING PAPER

Everette F. Bowen, Cedar Rapids, Iowa, assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application April 28, 1944, Serial No. 533,123
8 Claims. (Cl. 164—44)

1. In a trimming device including a cutter, a cutting board of plastic material, a light source, supporting means for said light source on one edge of the said board, and an opaque cover disposed over the light source and engaged on the edge of the board.

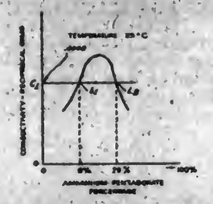
2,444,724



BEARING FOR ROCK BITS

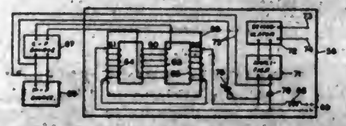
Robinson W. Brown, Oklahoma City, Okla., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a corporation of New Jersey

Application September 19, 1944, Serial No. 554,763
3 Claims. (Cl. 308—216)



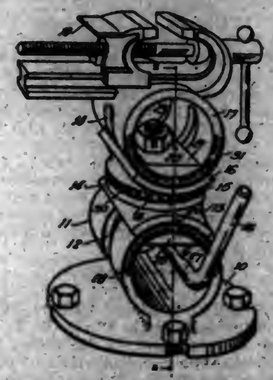
1. In an earth boring drill, a steel spindle adapted to be carried by a rotatable bit head and to be enclosed by a roller cutter, a rolling bearing raceway on the spindle, and a row of rolling bearings disposed thereon and adapted to engage a corresponding raceway within said roller cutter to support said spindle during the drilling operation, the loaded section of the spindle raceway being formed with a layer of perma-

nently applied adherent bearing surface material which is relatively softer and more resistant to



continued impact and spalling than the steel composing the main body of said spindle.

2,444,725
ELECTROLYTIC CONDENSER
John Burnham, Williamstown, Mass., assignor to Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts
Application August 9, 1944, Serial No. 548,705
16 Claims. (Cl. 175—315)

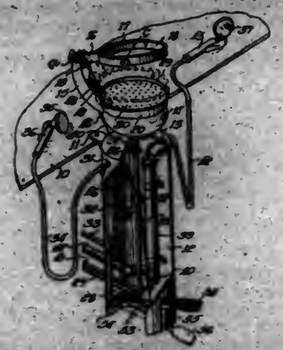


1. An electrolytic condenser wherein the electrolyte is a substantially unreacted solution of ammonium pentaborate dissolved in a polyhydric alcohol.

2,444,726
METHOD AND APPARATUS FOR DETERMINING THE MAGNITUDE OF A CONDITION
William H. Bussey, Chicago, Ill., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application February 5, 1944, Serial No. 521,236
7 Claims. (Cl. 323—89)

1. A method of determining the magnitude of a condition, comprising producing alternating magnetic fields linked with the secondary windings of an induction balance by applying concurrently to the primary winding of said balance alternating electromotive forces of substantially different basic frequencies, superimposing upon a portion of the magnetic circuit of one of said secondary windings a magnetizing force derived from a unidirectional current the magnitude of which varies with that of said condition, deriving from said secondary windings an output voltage including components having frequencies equal to the sum and to the difference of those of said alternating electromotive forces, and demodulating said voltage to recover therefrom a component having the lower of said basic frequencies.

2,444,727
UNITARY CLAMP FOR FRICTIONALLY HELD MULTIPLE SURFACES
Paine L. Bush, Dallas, Tex.
Application August 21, 1945, Serial No. 611,831
1 Claim. (Cl. 31—41)

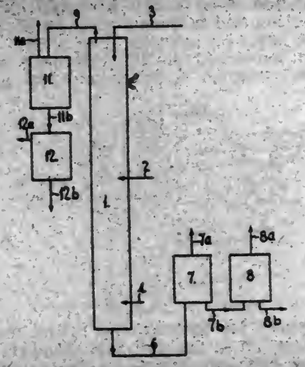


In a vise mounting; a hollow, stationary, cylindrical body, a saddle thereon having a circular boss, a second hollow cylindrical body supporting said vice, having thereunder an inverted saddle and a circular boss frictionally bearing on said first boss, friction plates arranged conformably within said bodies opposing said saddles, means holding said bodies together whereby the upper thereof will be capable of limited rotation about the cylindrical axis of said first body and unlimited rotation on an axis perpendicular to said cylindrical axis, a bolt extending through elongated, transverse slots in said cylindrical bodies and through central apertures in said bosses and friction plates, said bolt having a loop on its lower end and a cam rod extending through said loop and oscillatable to exert a force axially on said bolt to impose tension on said holding means to bind said bosses, saddles and bodies against relative movement, said cylindrical bodies having graduations on their ends to indicate the degree of rotative displacement and oscillative movement of said second cylindrical body.

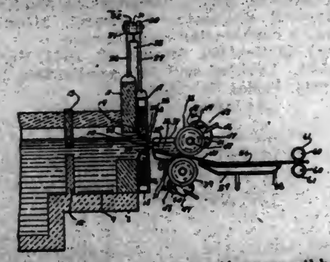
2,444,728
SPOT REMOVING MACHINE
Floyd H. Castoe, Dallas, Tex.
Application February 16, 1946, Serial No. 648,042
2 Claims. (Cl. 68—5)

1. A machine for removing spots in fabric comprising a tubular housing, a basin supported on the top of said housing, over which fabric is placed for cleaning, an arm extending outwardly from said housing, a clamping ring adapted to operatively engage the perimeter of said basin, a yoke pivoted to said ring having an arm pivoted at its end to the end of said first arm, a torsion spring embracing the pivot of said arms for holding said ring normally in raised position, a foot pedal, a cable connecting said pedal to said yoke arm to

lower said clamping ring to operative position against the resistance of said torsion spring, means entering and rising in said housing for supplying water for application to said fabric, means also rising in said housing for preheating air for application to said fabric and means passing through said housing for draining said basin.



2,444,729
METHOD OF PRODUCING ANIMATED MOTION PICTURES
Douglass Crockwell, Glens Falls, N. Y.
Application March 16, 1944, Serial No. 526,770
6 Claims. (Cl. 88—16)

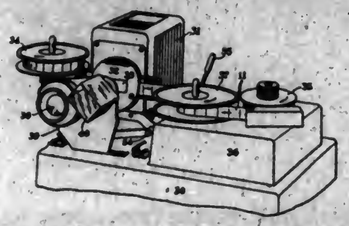


1. Those steps in the method of producing an animated motion picture of an object which changes in phase during an interval of time which comprise forming a body having spaced, parallel-disposed, transverse cross sections thereof conforming, respectively, in outline to the predetermined outline of said object at the beginning and end of said interval and having its exterior forming a desired transition surface between said cross sections, dividing said body transversely between and parallel to said cross sections into a multiplicity of slices to expose the cross sections thereof intermediate the first mentioned sections, and photographing in sequence the outlines of the object, as determined by said intermediate cross sections on successive frames of a motion picture film.

2,444,730
SOLVENT FRACTIONATION OF TALL OIL
Lowell O. Cummings and Henry A. Vogel, Milwaukee, Wis., assignors to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application February 21, 1946, Serial No. 649,312
6 Claims. (Cl. 260—97.5)

1. A process of fractionating crude tall oil into useful fractions which comprises selectively subjecting the fatty acids in said tall oil to esterification with an open chain alcohol of 1 to 5 carbon atom content and extracting the resultant mixture of fatty acid esters and rosin acids with a mutually immiscible nitroalkane containing 1 to 4 carbon atoms in the alkane nucleus and a liquid paraffin hydrocarbon as selective solvents to obtain a nitroalkane phase and a hydrocarbon phase, separating the phases, evaporating the solvents from said phases to obtain a concentrate of fatty acid esters and a concentrate of rosin acids and then distilling off a portion of the rosin acids from the rosin acid concentrate to obtain a clear rosin-like product.

2,444,731
ROLLING OF GLASS TO FORM SHEETS
Manson L. Devol, Wilkinsburg, Pa., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application February 26, 1943, Serial No. 477,231
1 Claim. (Cl. 49—87)

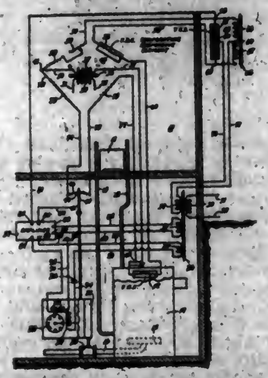


In a process of forming continuous ribbons of glass of uniform thickness by passing the sheet of molten glass from a tank between a pair of spaced forming rollers having polished surfaces, the steps comprising spinning said roller at a rate above 800 inches per minute and sufficient to entrain films of air upon the surfaces of the rollers whereby to prevent physical contact between the surfaces of the rollers and the surfaces of the sheet of glass being formed and spraying the surfaces of the rollers with water under a pressure of about 300 pounds per square inch whereby uniformly to cool the rollers and then drying the rollers before they contact with the molten glass.

2,444,732
FILM PUNCH
Harold L. Fitch, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application June 15, 1944, Serial No. 540,431
3 Claims. (Cl. 88—14)

1. A film punch comprising in combination a support, a body portion movably mounted on said

support, a stationary punch member formed on said portion, a movable punch member pivoted on said portion, a lever rockably mounted on said support, means on said lever for operatively connecting the latter to said portion so that movement of said lever in one direction will lift said body portion and said members as a unit to position the latter on opposite sides of said film and will then move said movable member toward said stationary member to punch said film, means on



said support for limiting the lifting movement of said portion to position said members in film punching relation, means on said support for moving said movable member away from said stationary member when said lever is moved in the opposite direction to lower said portion and members, and means for stripping the film off said movable member when the latter is moved away from said stationary member after the film has been punched.

2,444,733

IMPEDANCE BRIDGE

Willis H. Gille, St. Paul, and John V. Sigford, Minneapolis, Minn., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Original application August 28, 1941, Serial No. 408,594. Divided and this application October 27, 1944, Serial No. 560,662
5 Claims. (Cl. 323—75)

1. An impedance bridge, comprising in combination, a pair of impedances connected in one arm of said bridge, said impedances being located at different points remote from the other parts of said bridge circuit, and means for compensating the arms of the bridge adjacent said one arm for the resistance of the leads in said one arm connecting said remote impedances with said bridge, said means consisting of two further leads extending to said impedances and forming elements of the adjacent arms of said bridge.

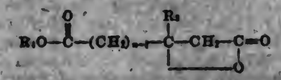
2,444,734

BACKLASH ELIMINATOR FOR PLANETARY GEARS

Glenn D. Gillett, New London, Conn., assignor to the United States of America as represented by the Secretary of the Navy

Application September 14, 1944, Serial No. 554,083
2 Claims. (Cl. 74—395)

1. In a planetary differential gear train, the combination of a plate support, a pair of rotatable members associated therewith, external and internal gears operatively attached to said members, respectively, said plate support having an opening, a first bushing rotatably mounted in said opening, diametrically-opposite ears extending from said first bushing and slidably engaging said plate support, said first bushing having an eccentric opening therethrough, a second bushing rotatably mounted in said eccentric opening, diametrically-opposite ears extending from said second bushing and slidably engaging said ears extending from said first bushing, said second bushing having an eccentric opening therethrough, a shaft rotatably mounted therein and extending through the same, intermediate gears secured to the ends of said shaft and meshing with said external and internal gears, respectively, said intermediate gears engaging opposite ends of said second bushing for retaining said shaft against axial movement thereof, means releasably locking the diametrically-extending ears of said first bushing to said plate support whereby said bushing may be adjusted relative to said plate support, and means releasably locking the diametrically-extending ears of said second bushing to said ears of said first bushing whereby said second bushing may be rotatably adjusted relative to said first bushing.



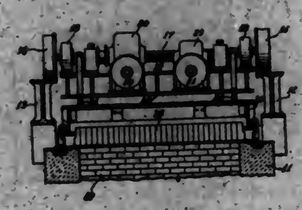
2,444,735

PREPARATION OF MONOESTERS OF DICARBOXYLIC ACIDS

Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application June 21, 1946, Serial No. 678,259
4 Claims. (Cl. 260—485)

1. The process of preparing mono acid esters of dicarboxylic acids which comprises hydrogenating, in the presence of a metallic hydrogenation catalyst selected from the group consisting of metallic platinum, metallic palladium and metallic nickel hydrogenation catalysts, an ester lactone having the general formula:



wherein R_3 represents a member selected from the class consisting of a hydrogen atom, a methyl group, an ethyl group, a phenyl group, a benzyl group and a phenylethyl group, and R_4 represents a member selected from the class consisting of a methyl group, an ethyl group, a phenyl group, a benzyl group and a phenylethyl group and n is a whole number from 1 to 4.

2,444,736

SEAL FOR SOAKING PIT COVERS

Frank D. Hazen, Pittsburgh, Pa., assignor to American Arch Company, Inc., New York, N. Y., a corporation of Delaware

Application May 8, 1943, Serial No. 486,164
5 Claims. (Cl. 110—173)

1. In a soaking pit cover, a metal framework including an I-beam at the edge of said cover having a horizontal lower flange, a metal strip welded to the outer edge of said lower flange and extending upwardly therefrom, and a sealing member secured in heat transfer relation to said strip and extending downwardly below said lower flange, said member having an inwardly offset portion below said flange providing an internal shoulder.

2,444,737

ELECTRICAL COIL

Herbert P. Heath, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application April 11, 1944, Serial No. 530,447
13 Claims. (Cl. 175—21)

1. An electrical coil comprising an inner tube of a polyamide obtainable by condensation polymerization from a diamine and a dibasic carboxylic acid, a winding thereon, insulation between the layers of the windings, and a covering of said polyamide material applied thereover.

2,444,738

MEANS FOR COVERING WALLS

Louis W. Holmes, Minneapolis, Minn., assignor of one-third to Albert M. Johnson and one-third to Anthony A. Rogers, both of Minneapolis, Minn.

Application November 2, 1945, Serial No. 626,201
4 Claims. (Cl. 108—9)

1. A wall covering comprising shingles adapted to be applied to a wall with the butt portion of one shingle overlapping the tip portion of another, said shingles being formed with upper openings in their tip portions to receive anchoring nails to be driven into the wall, and formed further with lower openings in the butt portions thereof, tie-clips, each including a shank formed with a return bend at its upper portion providing a downwardly turned hook at the rear of said shank, each tie-clip also including a shoulder-forming reach bent forwardly from the lower end of said shank, and further including a keeper-finger bent downwardly from said reach and adapted to be inserted through a lower opening in a shingle from the rear thereof to catch said shingle at its

front side, said hook being adapted to be caught over the upper edge of the tip portion of a previously anchored shingle, the shoulder-forming reach of each applied clip serving to support its respective shingle at the elevation in which it is to be nailed to the wall.

2,444,739

CONNECTOR PLUG

Louis J. Irrgang, Jersey City, N. J.

Application November 10, 1944, Serial No. 562,808
1 Claim. (Cl. 173—332)

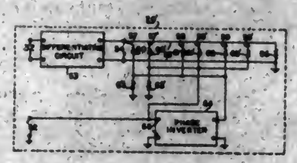
For an electrical connector of the type described, a single-piece sheet metal contact member having an elongated body initially having a shape so when it is formed it will have a spiral slit from end to end, the body also having at least one reinforcing rib intermediate its ends, said member having a conductor receiving end connected to the body by a relatively narrow neck, said end having upstanding side flanges adapted to be forced securely around the bared end of a conductor so the same will be substantially in alignment with the body axis.

2,444,740

ELECTRODE STRUCTURE FOR MULTIGRID ELECTRON DISCHARGE TUBES

Johan Lodewijk Hendrik Jonker, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., trustee

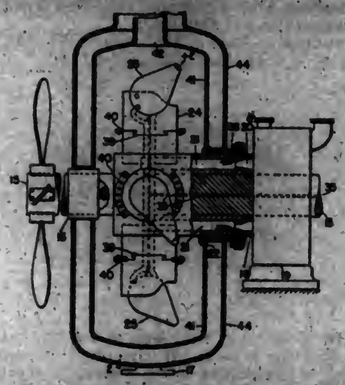
Application July 20, 1946, Serial No. 685,156
In the Netherlands September 10, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 10, 1963
3 Claims. (Cl. 250—27.5)



1. An electrode structure for a multigrid electron discharge tube having a plurality of grids mounted one behind the other, comprising a plurality of grid supports and a plurality of grid

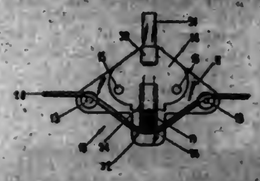
elements on said grid supports, each of said supports comprising an insulating member having a plurality of notches spaced along a single longitudinal side thereof, said notches being positioned in successive groupings and successive notches of

said groupings being of successively varying depths, the innermost extremities of said notches of each of said groupings being located on a line normal to said longitudinal side of said insulating member to fix the position of said grid elements.



2,444,741
WAVE-SIGNAL TRANSLATING SYSTEM
Bernard D. Loughlin, Bayside, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application December 31, 1943, Serial No. 516,394
7 Claims. (Cl. 177—353)

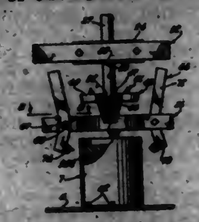
7. A selective wave-signal translating system for translating a signal having a plurality of pulse-type amplitude variations of predetermined pulse durations occurring in a predetermined time sequence comprising, means including a differentiating circuit and a serially connected time-delay network for receiving said signal, a first series of taps associated with said time-delay network for deriving from said received signal a first corresponding plurality of signal impulses occurring in time coincidence and individually representing the leading edge of a different one of said pulse-type amplitude variations of said received signal, a second series of taps also associated with said time-delay network for deriving from said received signal a second corresponding plurality of signal impulses occurring in time coincidence with one another and with said first plurality of signal impulses and individually representing the trailing edge of a different one of said pulse-type amplitude variations of said received signal, and means responsive jointly to said coincident first and second plurality of signal impulses for deriving an output signal, whereby said translating system is responsive only to signals having pulse-type amplitude variations of said predetermined pulse durations occurring in said predetermined time sequence.



2,444,742
GAS TURBINE
Martin Lutjen, Hoboken, N. J.
Application May 22, 1945, Serial No. 595,165
7 Claims. (Cl. 60—41)

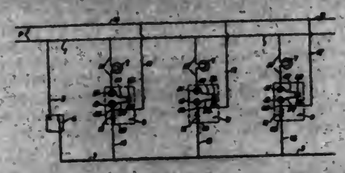
1. A gas turbine of the character described comprising a shaft; a rotor mounted on said shaft; a compressor mounted on said shaft; a plurality of combustion chambers removably fastened along the periphery of said rotor, said rotor and

shaft having channels connecting said compressor to said combustion chambers, and an outer housing enclosing said rotor and combustion chambers.



2,444,743
CABLE ADJUSTER
Constantine Melidoni, Fort Lee, N. J.
Application September 10, 1946, Serial No. 695,892
4 Claims. (Cl. 24—71.1)

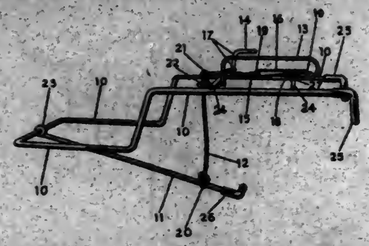
4. In a cable adjuster, comprising a sheet metal body member having two cable engaging members, a complementary sheet metal member, means for securing said members in spaced-apart relation from each other, said body member comprising a portion in right-angular relation thereto, said portion having a threaded aperture, a bolt threadably mounted in said aperture, said members having ribs extending outwardly therefrom and forming upright guideways, a cable contacting member slidably mounted in said guideways, the bottom wall of said cable contacting member having a concave upper surface for centering said bolt and a convex lower surface in direct contact with said cable, said plates having extensions forming a guideway for said cable to prevent disengagement of a slack cable from said cable adjuster.



2,444,744
MACHINE FOR PREPARING CONTAINERS FOR TRANSPLANTED NURSERY STOCK
Joseph L. Mossholder, Puente, Calif.
Application May 8, 1946, Serial No. 668,091
3 Claims. (Cl. 47—37)

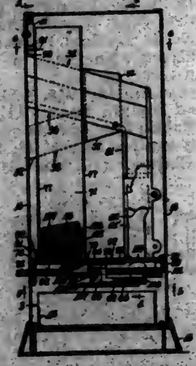
1. A machine for preparing containers for nursery stock to be transplanted from starting pots, said machine comprising means providing a support for one of said containers having soil therein, a frame extending above said support, a plunger mounted on said frame for movement toward and away from said support, a head carried by said plunger and comprising a presser plate, a dibble projecting from one face of said plate and substantially corresponding in form to the interior of one of said starting pots, and a

piercing punch projecting from the other face of said plate, and means for removably securing said head in operative position upon said plunger optionally, with either of said faces directed toward said support.



2,444,745
CIRCUIT CONTROL APPARATUS
Carl E. Mosley, Overland, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a corporation of Missouri
Application December 26, 1944, Serial No. 569,687
1 Claim. (Cl. 315—362)

A system for controlling lamps of a street-lighting circuit exposed to local temperature changes throughout its length, comprising a pilot line extending substantially along said circuit and fed from one side thereof, a control switch in said pilot line, control units located at intervals along said circuit and the pilot line, each control unit comprising a thermostatic switch in a lamp connection and adapted to control at least one but less than all of the lamps in the circuit, temperature-compensating means associated with each thermostatic switch in its respective unit preventing operation thereof in response to change in ambient temperature, each unit also including an electric heater connected between said pilot line and the other side of said circuit and adapted to operate the respective switch, whereby all of the heaters in all units respond to actuation of said control switch but a lamp responds only to the actuation of the thermostatic switch of the unit connected therewith.

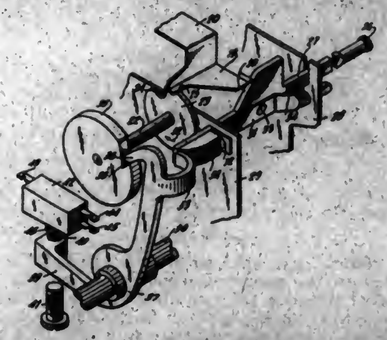


2,444,746
STORM WINDOW SUPPORT
Park L. Newbold, Cedar Rapids, Iowa
Application September 6, 1946, Serial No. 695,086
1 Claim. (Cl. 248—236)

In a storm window support the combination of a pair of parallel spaced side members made of strip material, each member bent downward at its rearward end to form a hook, and at a point forward of center, bent downward, thence continuing straightway in a manner that results in the outward parts of the side members being at a lower level than at their rear, a horizontal cross member connecting the side members at their forward ends, a horizontal cross member engaged to the side members at a point adjacent to their rearward ends, a third horizontal cross member placed somewhat forward of the rear, a handle, with an opening in its outer end, attached to the two rear cross members, a hinged brace secured to the outward cross member, a lever pivotally connected to the forward part of

the handle, an operating lever pivotally connected to the rear cross member, a connecting member between the two above levers, a flexible connecting member secured to the hinged brace, adjacent to its rearward part, and extending upwardly through an opening in the forward end of the handle to connect with the operating lever.

2,444,747
COIN-CONTROLLED VENDING MACHINE
Fred Niewoehner, Bergenfield, N. J., assignor to Postage Stamp Machine Co., New York, N. Y., a co-partnership
Original application January 17, 1945, Serial No. 573,199. Divided and this application January 11, 1946, Serial No. 640,564
9 Claims. (Cl. 312—56)



5. In a coin controlled vending machine, a magazine for holding a column of articles in stacked position, dispensing means for vending the lowermost article of said magazine, a follower having a projectable tongue adapted to hold one of said articles being vended, and means for locking said tongue in its projected position when said article carried thereby is vended.

2,444,748
CLOCK WITH VISIBLE AND AUDIBLE ALARM MEANS
Anthony J. Parisi, Cohoes, N. Y.
Application August 28, 1945, Serial No. 613,070
20 Claims. (Cl. 58—19)

4. In an alarm clock, the combination with a clock mechanism, of an electric lamp, an elec-

tric circuit including said lamp, means for connecting said circuit to a source of power, means for automatically making and breaking said lamp circuit to effect a flashing of said lamp, clock actuated means for producing an audible alarm, and clock controlled mechanism for actuating said lamp circuit connecting means and putting

said circuit making and breaking means and said audible alarm producing means into operation in sequence, in the order last named with an interval of substantial duration positively timed by the operation of said clock mechanism therebetween; whereby, in the event said lamp is defective said audible alarm will function in lieu thereof after the expiration of said interval.

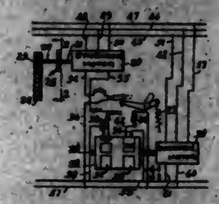
2,444,749

ELECTRON DISCHARGE DEVICE UTILIZING CAVITY RESONATORS

Albert Frederick Pearce, Hampton Hill, and Norman Charles Barford, Hayes, England, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain

Application September 19, 1945, Serial No. 617,334
In Great Britain August 11, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires August 11, 1962
2 Claims. (Cl. 315—6)

1. An electron discharge device having a cathode for providing a beam of electrons and an electrode toward which said electrons are directed, and a cavity resonator positioned between said cathode and said electrode, said cavity resonator having large apertures in opposite walls thereof and through which the path of the beam of electrons passes, grids positioned across said apertures, said grids being spaced further apart at the center of said grids than at their peripheries.



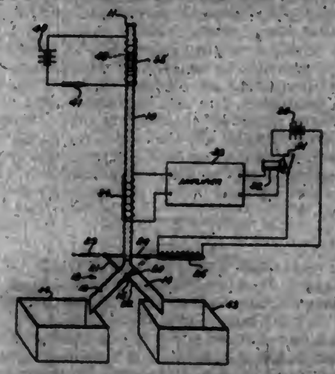
2,444,750

RADIO DEVICE FOR SECRET COMMUNICATION

Anna Ptáček, New York, N. Y.

Application August 9, 1944, Serial No. 548,727
5 Claims. (Cl. 250—6)

1. In combination with a radio sender having a knob which may be turned back and forth for varying the wave lengths of the transmission and a radio receiver having a knob which may be turned back and forth for varying the wave lengths of reception, automatic means for turning each of said knobs back and forth in short periods synchronized with each other, comprising a synchronous motor, a transmission from said synchronous motor to said knob and including a Geneva drive, a reversing switch for said synchronous motor, a coded rotary switch having a section for supplying current to said synchronous motor in periods of different coded lengths of short intervals of time and also having a section for reversing said switch for periods



of different coded lengths of short intervals of time, a synchronous motor for driving said rotary switch, an electric circuit for said first named synchronous motor and including in series said reversing switch and the first named section of said rotary switch, electro-magnetic means for throwing said reversing switch, and an electric circuit including in series said electromagnetic means and the second named section of said rotary switch, and the synchronous motors of each of said automatic means for turning said knobs being in synchronization with each other.

2,444,751

METHOD AND APPARATUS FOR SORTING MAGNETIC MATERIALS ACCORDING TO THEIR RESIDUAL MAGNETISM

Kenneth L. Scott, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application February 12, 1946, Serial No. 647,149
7 Claims. (Cl. 209—72)

1. A method of sorting ferromagnetic bars in accordance with their magnetic characteristics comprising magnetically suspending a bar to be tested in a magnetic field to magnetically saturate said bar, removing said field to permit said bar to drop by the force of gravity through a coil thereby to cause an electromotive force to be generated in said coil, and utilizing said generated electromotive force to operate a separating device to classify said bar in accordance with the amount of residual magnetism therein.

2,444,752

PARTICLES COATED WITH 2,2-BIS-(PARACHLOROPHENYL) - 1,1,1 - TRICHLOROETHANE

Edward H. Siegler, Takoma Park, Md.

No Drawing. Application January 20, 1945, Serial No. 573,797
1 Claim. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A process comprising intimately mixing a solid material in finely divided form with an insecticidal quantity of 2,2-bis(parachlorophenyl)-1,1,1-trichloroethane and heating the resulting mixture to fuse the said 2,2-bis(parachlorophenyl)-1,1,1-trichloroethane as a continuous external coating on the surfaces of each of the individual particles of said solid material.

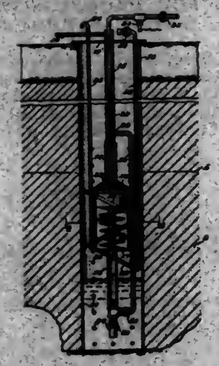
2,444,753

COOKING UTENSIL

Alexander N. Smith, Spring Valley, N. Y.

Application June 21, 1946, Serial No. 678,442
5 Claims. (Cl. 250—20)

1. A boiler construction having an open top, a cover adapted to fit the open top and having a plurality of holes therein, a measuring cup adapted to fit on the top of the cover and to be oscillated, said measuring cup having an open bottom construction, a stirring blade within the compartment and having an operating shaft, said shaft extending upwardly through one of the openings of the cover, and means for connecting the shaft with the measuring cup bottom whereby as the measuring cup is oscillated to urge the contents of the same through openings of the cover the stirring blade will be automatically oscillated to stir the contents into liquid within the compartment.



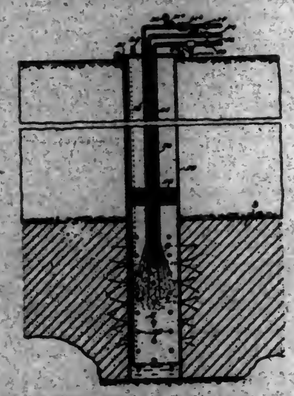
2,444,754

APPARATUS FOR HEATING OIL WELLS AND PUMPING OIL THEREFROM

Ralph M. Steffen, North Hollywood, Calif.

Application January 4, 1946, Serial No. 639,124
10 Claims. (Cl. 166—17)

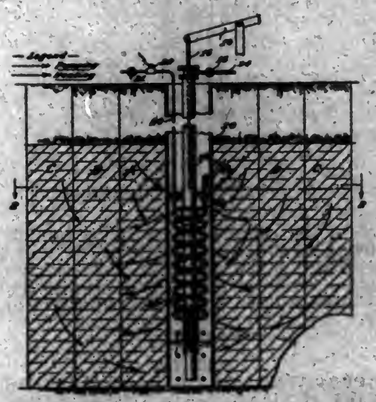
1. Apparatus for heating the interior of a well defined by a perforated casing extending through an oil sand strata and for pumping oil from the well comprising an oil pump disposed within the casing adjacent the lower end of the well, said pump comprising a cylinder and a cooperating piston therein yieldably retained in an upper position by a spring, a combustible gas conduit communicating with the cylinder above the piston therein, means for admitting and igniting successive combustible charges in the conduit for disposition of heat therefrom and for forcing the piston downward, an oil delivery conduit communicating with the interior of said cylinder and extending from beneath the piston to a point above the ground surface, and check valves supported by the cylinder and delivery conduit for admitting oil to the cylinder beneath the piston upon upward movement of the piston and for admitting oil from beneath said piston to the delivery conduit upon downward movement of the piston.



2,444,755

APPARATUS FOR OIL SAND HEATING

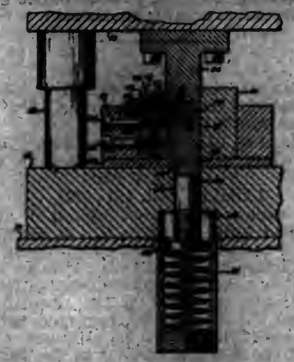
Ralph M. Steffen, North Hollywood, Calif.



Application January 4, 1946, Serial No. 639,125
2 Claims. (Cl. 166—17)

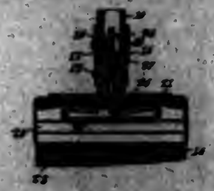
1. The combination of a bore extending into an oil bearing strata, a casing having a perforated section at its lower end, an insulating and packing partition in said casing above the perforated section forming a chamber freely communicating with the face of said strata, a plurality of parallel valved conduits extending into said bore and through said partition and terminating adjacent each other in said chamber, means for separately introducing the constituents of a combustible mixture through two of said conduits, means for introducing a combustible mixture thrpugh a third of said conduits,

means for intermittently igniting said latter mixture above said casing for igniting and maintaining combustion of said constituents in said chamber.



2,444,756
APPARATUS FOR PROGRESSIVELY HEATING OIL SANDS SURROUNDING OIL WELLS
Ralph M. Steffen, North Hollywood, Calif., assignor to National Secondary Recovery Corporation, Reno, Nevada, a corporation of Nevada
Application January 4, 1946, Serial No. 639,126
6 Claims. (Cl. 166—17)

1. Apparatus for progressively heating successive zones of oil sand radially of a well having a perforated casing and a pump supported therein by a tubing extending axially of the well to a point exteriorly thereof, comprising a tubular coil surrounding the pump tubing, a conduit connected with an end of the coil and extending upwardly through the well and externally thereof to a point of combustible gas supply, a check valve in the conduit for admitting successive charges of combustible gas to the coil and means for igniting the successive gas charges whereby the coil wall is heated and the heat radiated therefrom through the casing perforations and into the surrounding oil sand, said coil being suspended from a flange on the pump tubing, the inner diameter of said coil being greater than the diameter of the flange to facilitate admission of the coil over the tubing and into the well.

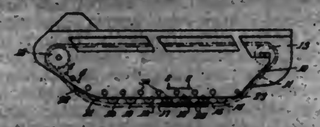


2,444,757
ARTICLE FORMING APPARATUS
Jacob Stastny, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application February 2, 1945, Serial No. 575,888
6 Claims. (Cl. 153—33)

1. An apparatus for forming angularly shaped parts comprising a stationary die having a forming surface, a rotatable anvil having a surface upon which one portion of a part is seated and which is movable into the plane of said forming surface, a movable member cooperating with said anvil to support another portion of the part, a plunger for gripping the part to said member and moving it past said anvil to bend the part therebetween and thereafter, in cooperation with said forming surface, forming the part, and means for maintaining said member in operative rela-

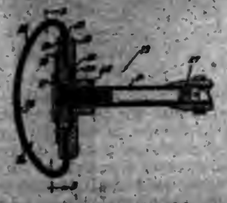
tion with the part and plunger during the bending and forming of the part.

2,444,758
CLEANING IMPLEMENT
Jan H. Stillbach, Woburn, Mass.
Application December 11, 1947, Serial No. 790,967
4 Claims. (Cl. 306—23)



1. The combination with a handle having a socket in its lower end, of a cleaning material supporting frame co-operating therewith, said socket being provided with a longitudinal slot running inwardly from its open end, a cylindrical stem mounted upon said frame adapted to be seated in said socket, a laterally extending pin on said stem for engagement with said slot, a locking sleeve oscillatably arranged on said handle over said socket and being provided with a bayonet slot having one leg capable of overlying said first-named slot and its other leg running at right angles thereto, whereby said pin is prevented from disengagement from said first-named slot when said locking sleeve is turned so that one of its legs is brought out of alignment with said first-named slot, and a spring mounted on said sleeve and bearing against the inner surface of said socket to prevent accidental turning of said sleeve on said handle.

2,444,759
WHEELED VEHICLE
Benjamin A. Swennes, Rockford, Ill., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application November 15, 1943, Serial No. 510,296
8 Claims. (Cl. 305—9)



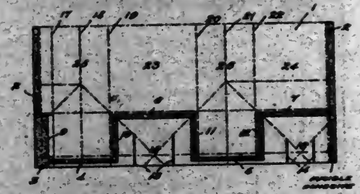
1. In a vehicle, the combination of a vehicle body, at least three supporting wheels for the vehicle disposed in tandem on each side of the body, and means yieldingly connecting each of

said wheels and said body, said yielding means for each of a pair of end wheels on each side of the body exerting a greater force on the wheel than the force exerted on the wheels intermediate the end wheels by their yielding means so

that each of the end wheels supports a greater part of the weight of the body than a wheel intermediate the end wheels when the vehicle is on a flat surface whereby to suppress rocking of the vehicle on intermediate wheels thereof.

2,444,760
SANDING DEVICE
Eugene Tambini, Milford, Conn.
Application March 21, 1946, Serial No. 655,958
1 Claim. (Cl. 51—196)

In combination with a portable power-driven shaft and coupling element on its outer end, of a buffing head detachably coupled with said shaft, said buffing head comprising an axially hollow shaft having screw threads adjacent one end thereof, a coupling member and a valve adjacent the other end thereof, said valve being disposed inside said hollow shaft for closing the shaft with respect to air passing outwardly thereof, a disc mounted on said threaded end of said shaft supporting a clamping plate, a flexible pneumatic bag supported upon said plate, an abrasive member supported upon said bag, a second clamping plate, the edges of the bag and abrasive member being positioned between said clamping plates and retained in position therebetween, a clamping nut on said threaded portion of the shaft for pressing the clamping plates together to sealingly hold said bag and abrasive member upon the end of said shaft, whereby said buffing head may be inflated to a predetermined pressure before being coupled to the power-driven shaft, said valve maintaining said pressure during normal use of said buffing head.



2,444,761
EMERGENCY RAIN GARMENT
Verne E. Walsten, Pataskala, Ohio
Application September 11, 1946, Serial No. 696,303
1 Claim. (Cl. 2—84)

An emergency rain garment comprising a single integral blank formed from a water repellent material and including head and body portions, said head portion being folded along its transverse axis and united along its upper edge to form an opened front head-receiving hood, said body portion being folded and united along its upper edge to form a hem, and a flexible tie connector carried within said hem, said connector when united serving to draw the garment about the neck of a wearer with the body portion draped from the shoulders and surrounding the arms and body of the wearer, the lower and outer edges of said body portion being weakened to provide

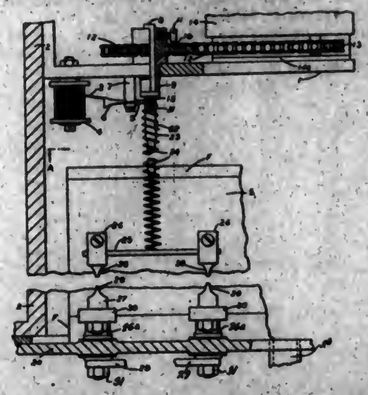
spaced severance lines whereby portions of said garment may be removed to adapt the same for use by wearers of various sizes.

2,444,762
BAG AND PROCESS OF MAKING THE SAME
Harry F. Waters, New York, N. Y.
Original application May 14, 1940, Serial No. 335,045. Divided and this application July 10, 1944, Serial No. 544,185
5 Claims. (Cl. 93—35)

1. A bag of the automatically opening bottom type which comprises in combination a tube of non-fusible sheet material folded longitudinally along a plurality of lines to form a pair of side panels and a pair of main panels connected to said side panels, a preformed rectangular bottom structure flattened in the plane of said main panels constituted of extensions of said side panels folded towards each other and of the resulting tabs folded over each other, U-shaped lines of fusible adhesive on the inner surface of the portions of said bottom structure forming extensions of said main panels, said U-shaped lines opening toward the outermost free edges of the main panel flaps, and lines of adhesive on the outer surface of the end marginal portions of the extensions of said side panels, said lines of adhesive being in register with each other and to be fused together by the application of a heated surface to a substantially fluid-tight and sift-proof bottom closure of the automatically opening type.

3. The process of making a bag of the automatically opening bottom type which comprises providing a web of flexible non-fusible sheet material, applying a strip of a fusible adhesive adjacent to each of the longitudinal edges of said web, folding said web along a plurality of longitudinal lines to bring said longitudinal strips of adhesive into a face to face relationship and to form a tube having a pair of main panels and a pair of reentrant side panels connecting said main panels, fusing said strips of adhesive to form a longitudinal fin-type seam, applying

spaced continuous lines of fusible adhesive transversely extending across said main and said side panels in a staggered position and having longitudinally extending portions connecting the same, folding the terminal portions of said panels into a rectangular overlapping bottom-forming position and thereby bringing said transversely extending lines of adhesive into a cooperating and face to face position in the plane of the resulting bottom structure, applying heat and pressure against the outer surface of the resulting bottom structure to simultaneously fuse said cooperating lines of adhesive and to convert them into dams effectively preventing the escape of fluid from said tube through the intervals of the superposed layer in said bottom structure, and severing the resulting bag from said tube.



2,444,763

PROCESS AND APPARATUS FOR DEPOSITING METALS ON A SUPPORT BY THERMAL EVAPORATION IN A VACUUM

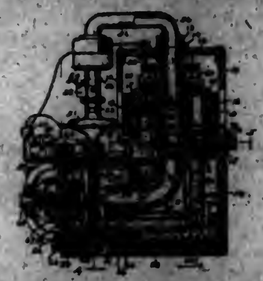
Paul Alexander, Berkhamsted, England

Application October 7, 1946, Serial No. 701,758

3 Claims. (Cl. 117—107)

3. Process of depositing aluminium on a support by thermal evaporation in a vacuum wherein a tungsten heater is used to evaporate the metal and the metal is in the form of a wire continually advanced to the heater so that the end only of the wire touches the heater to evaporate the metal, characterised in that the wire is fed to the heater in the form of a freely depending helix rotating about its axis, the rate of descent of the wire on the helix being related to the temperature of the heater to effect instantaneous evaporation of the wire as it comes in contact with the heater, and the heater presents only a relatively small cross section to the helix, the radius of the helix being somewhat greater than the extent of maximum deflection of the free end of the helix laterally of the heater.

2,444,764



HEAT ENGINE

Erwin G. Baker, Indianapolis, Ind.

Application December 30, 1944, Serial No. 570,599

12 Claims. (Cl. 123—43)

10. An engine comprising an L crank fixed in position; a barrel revolubly mounted on one leg of the crank; a second barrel revolubly mounted on the other leg of the crank; each of said barrels being provided with a common number of cylinders opening at adjacent ends of the barrels; a piston in each cylinder of each barrel interconnected at substantially right angles one with another; fuel supply means having a discharge port; a transverse passageway entering each cylinder of said first barrel and having a port registrable once each barrel revolution with said fuel port; a relatively stationary housing member fitting around said first barrel and having an exhaust port; said first barrel having an exhaust passageway from each cylinder with a discharge port positioned to register with said housing port once each barrel revolution; fuel igniter means in each cylinder; an electrode ex-

tending externally of each igniter; a relatively fixed electrode past which said igniter electrodes travel; and a source of current interconnected with said electrodes; said fuel supply means comprising a passageway through at least one of said crank legs, and said fuel discharge port being through a wall of that leg; said one leg of the crank having a passageway therethrough leading from said fuel supply means; and said fuel supply discharge port being in said first leg communicating with said passageway therein; and means creating atmospheric or above pressure in said leg passageway; and gear means drivingly interconnecting said barrels.

2,444,765

ELECTRIC CIRCUIT BREAKER

Alexander C. Boineau, Lansdowne, and Benjamin S. Beall, Upper Darby, Pa., assignors to General Electric Company, a corporation of New York

Application December 27, 1944, Serial No. 570,006

10 Claims. (Cl. 200—148)

1. In a fluid blast electric circuit breaker comprising a pair of relatively movable contacts separable to form an arc therebetween, a sleeve-like member coaxially arranged with respect to one of said contacts to form an annular fluid passageway around said one contact, the other contact being disk-like in form and having an opening therein which cooperates with said one contact to prevent the passage of fluid through said opening when said contacts are in engagement, said sleeve-like member abutting against said disk-like contact to define radial passages therebetween, and means for supplying a blast of arc extinguishing fluid to said annular fluid passageway and through said opening when separation of said contacts occurs.

2,444,766

METHOD OF PREPARING INSULATING AND DIELECTRIC MATERIALS

Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

Application June 7, 1946, Serial No. 675,271

5 Claims. (Cl. 18—47.5)

1. The method of molding iron phosphate particles to a coherent state which consists in subjecting said particles to pressure at a temperature at least as high as about 140° C. for a length of time not materially exceeding ten minutes.

2,444,767

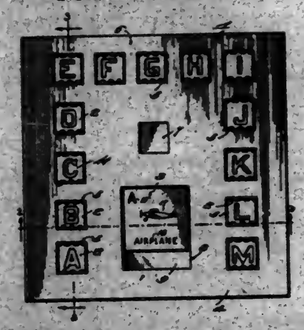
GAS-ARC WELDING APPARATUS

Richard W. Cobeam, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application May 29, 1944, Serial No. 537,789

2 Claims. (Cl. 219—14)

1. A handle for supporting and supplying gas and electric current to the electrode holding nozzle of a gas-arc torch, said handle comprising a frame having a gas passageway extending through its nozzle supporting front end portion, a hand grip mounted on and enclosing said frame and having a longitudinal slot in its front end portion, a resilient tube within and extending lengthwise of said hand grip, said tube having its front end portion connected with said gas passageway in said frame, a slide having one side thereof frictionally engaging the inside surface of said hand grip and having one end thereof bent back upon itself along its other side to form a spring loop, an operating member mounted on the other end of said slide and extending through said slot in said hand grip, a roller mounted on said spring loop of said slide for movement with said slide along one side of and against said resilient tube, a supporting surface within said hand grip and extending lengthwise along the other side of said resilient tube and inclined to the path of travel of said roller and said slide upon it which is mounted so that movement of said slide and said roller lengthwise of said handle controls the flattening of said resilient tube between said roller and said inclined surface, and means for supplying gas to the other end of said resilient tube.



2,444,768

EDUCATIONAL GAME DEVICE

Herbert O. Eby, Pittsburgh, Pa.

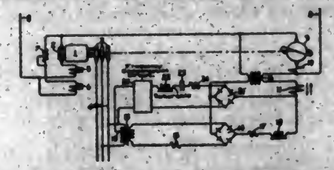
Application August 13, 1945, Serial No. 610,537

1 Claim. (Cl. 35—73)

In an educational game device, a game board formed with a series of recesses arranged in a definite pattern adapted to receive a corresponding plurality of blocks, said board being formed with a primary well within said pattern corresponding in dimensions to said recesses, and a secondary well within said pattern, a series of player pieces in said secondary well, each carrying on opposite surfaces, respectively, an alphabetical character, a picture and a word defining said picture, the first letter of the word defining said picture corresponding to said associated alphabetical character, a series of indicia bearing blocks of dimensions substantially corresponding to said recesses, one surface of the respective blocks being formed with an alphabetical character of the first half of the alphabet and another surface with an alphabetical character of the second half of the alphabet, two other surfaces of the blocks, one formed with a picture and a word defining the picture, each of the latter beginning with an alphabetical character of the first half of the alphabet, and the other surface formed with a picture and a word defining the picture, each of the latter beginning with an alphabetical character of the second half of the alphabet, said blocks adapted for successive arrangements in the recesses of said pattern to successively expose the respective indicia bearing surfaces thereof, each block adapted to be selectively positioned in said primary well, first, with an alphabetical character exposed, second, with an alphabetical character exposed, in conjunction with the exposing of a corresponding alphabetical character and associated indicia beginning with said character on a respective player piece in said secondary well, and, third, with a picture and word exposed.

2,444,769

REGULATING SYSTEM FOR INVERTED ROTARY CONVERTERS



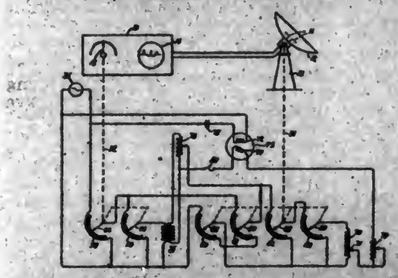
Alec Fisher, Lynn, Mass., assignor to General Electric Company, a corporation of New York

Application August 17, 1946, Serial No. 691,284

11 Claims. (Cl. 171—123)

1. Regulating apparatus for a direct current-to-alternating current energy transforming sys-

tem comprising, a variable voltage source of direct current energy, a dynamo-electric machine having a direct current energy input and an alternating current energy output, an auxiliary electric generator mechanically connected to said dynamo-electric machine, said auxiliary generator output terminals and the direct current input side of said dynamo-electric machine being connected in series and across said variable voltage direct current energy source, means responsive to



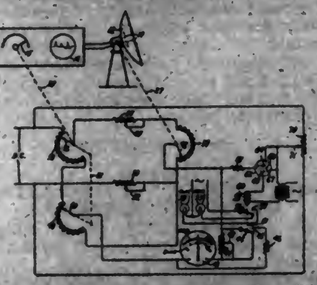
an electrical condition of the alternating current output side of said dynamo-electric machine for varying the output of said auxiliary generator to maintain constant said direct current voltage applied to the input of said dynamo-electric machine, said last mentioned means including a control field for said auxiliary generator, and a nonlinear saturable reactor for varying said control field excitation with changes in alternating current output voltage.

2,444,770

HEIGHT COMPUTING APPARATUS

George W. Fyler, Stratford, Conn., assignor to General Electric Company, a corporation of New York

Application June 28, 1943, Serial No. 492,499
11 Claims. (Cl. 235—61)



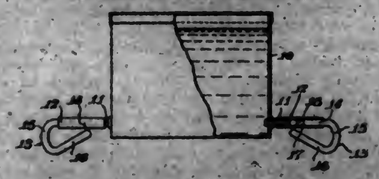
11. An apparatus for computing the height of a distant object comprising a source of alternating current, a plurality of transformers having adjustable outputs, one of said transformers being connected across said source and the remaining ones of said transformers being connected in cascade with said one transformer, means for varying the output voltage of said one transformer in accordance with the range of said object, means for varying the output voltages of a plurality of said remaining transformer in accordance with the angle of elevation of said object to produce voltages proportional to the product of said range and the first and third powers respectively of said angle, means including an additional transformer having connected across the output of said one transformer and having its output adjustable in accordance with said range for producing a voltage proportional to the second power of said range, and means for adding a predetermined portion of said last mentioned voltage to said sine product voltage to provide a voltage proportional to the height of said object corrected for the curvature of the earth.

2,444,771

HEIGHT COMPUTING APPARATUS

George W. Fyler, Stratford, Conn., assignor to General Electric Company, a corporation of New York

Application June 28, 1943, Serial No. 492,500
8 Claims. (Cl. 235—61.5)



8. An apparatus for computing the altitude of a distant object comprising a constant voltage source of direct current, first, second, and third linear resistances each having an adjustable contact associated therewith, said first resistance being connected across said source and said second and third resistances being connected in series and between one end of said first resistance and its adjustable contact, an electric indicating instrument connected between the contacts of said second and third resistances, means for selectively moving the contacts of said first and third resistances simultaneously in accordance with the range of the distant object whereby the voltage drops across the selected portions of said first and third resistances are respectively proportional to the first and second powers of the range, means for selectively moving the contact of said second resistance in accordance with the angle of elevation of the object, the relative values of the resistance of said instrument and of said second resistance being so proportioned that the voltage drop across the selected portion of said second resistance varies in accordance with the product of the range and the sine of the angle of elevation, and means for calibrating said third resistance to provide a voltage drop proportional to the earth's curvature correction for the range of the object.

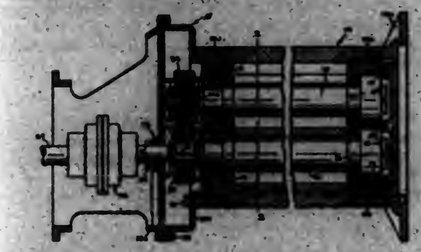
2,444,772

DRINKING APPLIANCE FOR BIRDS AND ANIMALS

Ronald Edward Gibbes, Weedon, England

Application February 4, 1947, Serial No. 726,272
In Great Britain September 3, 1946
5 Claims. (Cl. 119—72.5)

1. A liquid controlling and delivery appliance for use in association with a container, comprising a resilient but self-sustaining tube having a transverse cut which normally is maintained substantially closed, whereby a portion of the tube is capable of displacement to open the slit, said portion having a closed outer end, and means



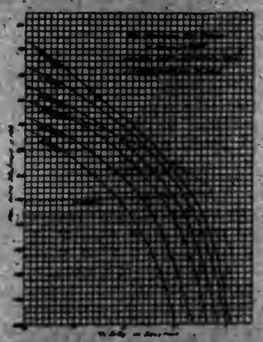
associated with said displaceable portion to form a drip runway and dripping point for delivered liquid and which is readily operable by the head of a bird or animal to displace the said portion of the tube.

2,444,773

ADJUSTABLE GEARING

John T. Gendick, Minneapolis, Minn., assignor, by mesne assignments, to The Northern Pump Company, Minneapolis, Minn., a corporation of Minnesota

Application May 18, 1944, Serial No. 536,139
3 Claims. (Cl. 74—461)



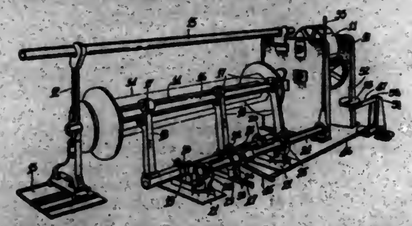
1. A structure of the class described having in combination, a pair of parallel shafts, cooperating means on said shafts determining the circumferential relative positions of said shafts, a driving gear fixed to one of said shafts, a second gear meshing with said driving gear and mounted on the other of said shafts, one of said shafts having a multiplicity of splines formed thereon, said splines extending somewhat helically of said shaft and said gear on said shaft having grooves fitting over said splines, said splines being close in number to the number of teeth on said second gear whereby a gear can replace said gear and be brought into proper meshing relation with the other gear without disturbing the circumferential relation of said shafts.

2,444,774

PURIFICATION OF RAW WATERS

Harold R. Hay, Bryn Mawr, Pa., assignor to Philadelphia Quartz Company, Philadelphia, Pa., a corporation of Pennsylvania

Application November 3, 1943, Serial No. 508,857
20 Claims. (Cl. 210—23)



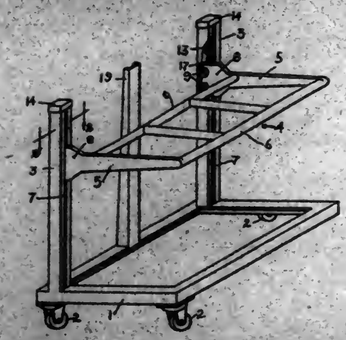
1. In the purification of raw waters, the process which comprises adding to the water a small amount of a water soluble coagulant which is capable of forming an insoluble precipitate when reacted with a silicate and, prior to the coagulation, adding to the water a coagulation aid comprising an aqueous solution containing ammonium silicate and hydrolytic products derived therefrom in small amount sufficient to react with said coagulant to produce a siliceous flocculent precipitate and consequent purification of said water and removing the precipitated solids from the water.

2,444,775

WARP BEAM COMPRESSOR DEVICE

Frank B. Javery, Worcester, Mass., assignor to Warp Compressing Machine Company, Worcester, Mass., a corporation of Massachusetts

Application October 4, 1946, Serial No. 701,256
7 Claims. (Cl. 28—38)



1. The combination in a warp beam winding machine including a rotary warp beam for winding material thereon, and means for rotating said warp beam, of a compressor shaft for engaging the surface of the material which is wound about said warp beam, said compressor shaft being adapted to be shifted away from said warp beam by the material as it accumulates on said warp beam, and means connected with said compressor shaft for opposing the movement of said compressor shaft away from said warp beam, said means comprising a pair of interengaging and relatively slidable friction blocks of which one is connected to said compressor shaft, and means for biasing said friction blocks together thereby to oppose relative sliding movements therebetween in one direction.

2,444,776

APPARATUS FOR HANDLING MATTRESSES

Frederick R. Kalning, Quincy, and Richard E. Mathewson, Weymouth, Mass., assignors to United Mattress Machinery Co., Inc., Quincy, Mass., a corporation of Maine

Application July 24, 1946, Serial No. 685,859
2 Claims. (Cl. 211—23)

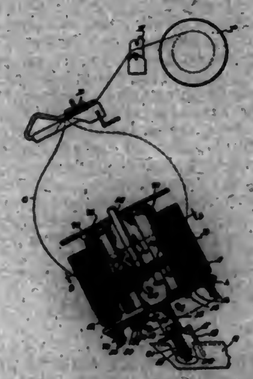
2. A device of the class described comprising a truck frame, a post rising therefrom at each

end thereof, a vertically movable mattress-supporting frame, said posts having means for guiding the platform in its vertical movement, and spring means for supporting the platform when unloaded at a predetermined level, said spring means being constructed to yield sufficiently in response to the weight of a mattress placed on the platform to permit the level of the platform to be lowered by an amount substantially equal to the thickness of the mattress.

2,444,777
HEEL FOR FOOTWEAR
Allen H. Kerngood, Baltimore, Md.
Application May 25, 1946, Serial No. 672,254
3 Claims. (Cl. 36—75)

2. A wear-resisting element for heels for footwear, said wear-resisting element comprising a crested plate of wear-resisting material curved to conform to the curved edge of a heel, the bottom of the plate being in substantially the same plane and the top edge of the plate gradually receding from a high point in the center toward the extremities of the plate.

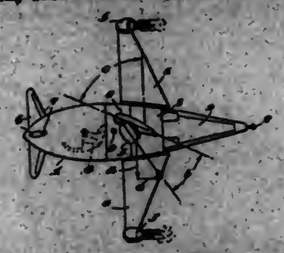
2,444,778
APPARATUS FOR WELDING TUBING
Walter Kopec, Cleveland, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Original application October 24, 1942, Serial No. 463,271, now Patent No. 2,422,305, dated June 17, 1947. Divided and this application May 18, 1947, Serial No. 747,755
5 Claims. (Cl. 219—6)



1. A mandrel suitable for use with atomic-hydrogen tube welding apparatus, comprising an elongated member having a midportion which is substantially cylindrical and which is slightly less in diameter than the inside diameter of the tube in which it is to be used, having a top surface inclined downwardly from said cylindrical portion toward the trailing end thereof and having a passage extending from the leading end thereof to an outlet opening in the leading part of said top surface.

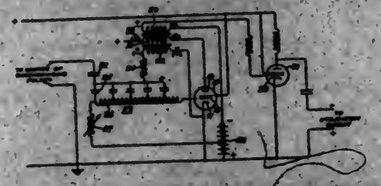
2,444,779
BOTTLE CAP
Rudolf Krasberg, Chicago, Ill.
Application April 6, 1946, Serial No. 660,199
6 Claims. (Cl. 215—45)

1. A readily removable closure cap assembly adapted to seal a container having an opening formed with a peripheral bead including in combination a gripping member having a plurality of depending fingers, each of said fingers being formed with an intermediate inwardly directed portion adapted to underlie the bead of the container being sealed and an outwardly directed flange, a resilient sealing member surrounded by said fingers and adapted to seat on said bead, a cap having a depending flange, a threaded stud member carried by said cap and adapted to rotate therewith, said gripping member having an aperture with the periphery thereof formed into a helix and adapted to receive said stud member whereby upon relative rotation between said cap and said gripping member the flange of said cap member will thrust the flange of each of said fingers of said gripping member downwardly to increase the sealing force exerted upon said sealing member.



2,444,780
EXPANDING CAKE HOLDER
James R. Lathan and Marvin H. Comer, Burlington, N. C., assignors to Burlington Mills Corporation, Greensboro, N. C.
Application April 28, 1947, Serial No. 744,480
4 Claims. (Cl. 242—129)

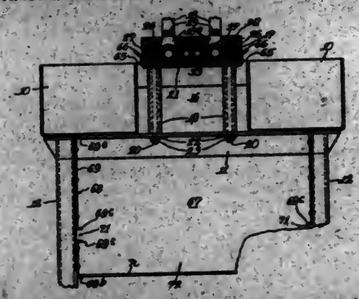
1. An expansible yarn cake holder having a base plate, a pair of relatively movable members mounted on the base plate and adapted to jointly support a yarn cake, one being fixed and the other slidable, resilient means urging the slidable member outwardly, means carried by said base plate and coacting with a portion of said slidable member for limiting the outward movement of said slidable member, and means comprising a pivoted catch member mounted in said base plate adapted to retain the movable member in retracted position until positively released.



2,444,781
AXIAL FLOW HELICOPTER
Lloyd H. Leonard, New York, N. Y.
Application December 8, 1943, Serial No. 513,423
4 Claims. (Cl. 244—7)

1. An aircraft capable of both vertical and horizontal flight and comprising an elongated fuselage, a single set only of propeller blades rotatable in a common plane about the longitudinal axis of said fuselage at a point behind the center of gravity, said fuselage having no wings or tail surfaces whatever, said blades, with the fuselage itself, constituting the means for sustaining the craft during flight, and fins projecting radially from the nose portion of the fuselage

and having angularly adjustable control surfaces thereon.

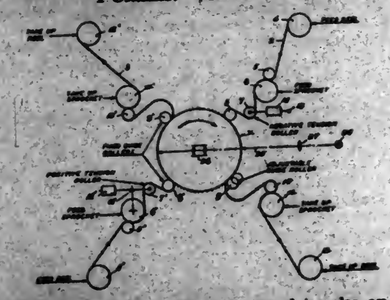


2,444,782
PULSE GENERATING CIRCUITS
Harold W. Lord, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 31, 1942, Serial No. 464,033
9 Claims. (Cl. 250—36)

1. An electric pulse generating apparatus comprising an electric discharge device having an anode, a cathode and a control electrode, a source of unidirectional current supply connected to said anode and cathode in series circuit relation with one winding of a transformer, means for rendering said discharge device conductive, means including a second winding on said transformer regeneratively connected to impress a positive bias potential upon said control electrode in response to increasing current in said anode-cathode circuit, and means for rendering said discharge device non-conductive a predetermined time after initiation of conduction therein including an artificial transmission line section connected in series circuit relation with said second winding between said cathode and said control electrode, said transmission line being energized from said second winding and connected to impress upon said control electrode a delayed negative potential which reduces said positive bias potential abruptly, thereby to render said discharge device non-conductive and to terminate the flow of current therethrough.

2,444,783
HOSIERY DRYING TABLE
Arthur S. Mann and Howard Campbell, Kankakee, Ill., assignors to Paramount Textile Machinery Co., Kankakee, Ill., a corporation of Illinois
Application August 1, 1945, Serial No. 608,136
9 Claims. (Cl. 34—90)

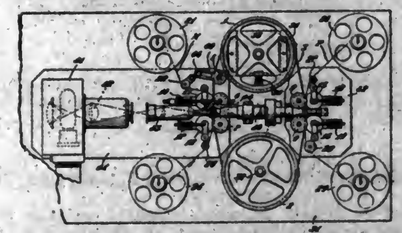
1. A drying table for textile articles comprising, a series of drying forms, means for supplying a heating medium to said drying forms, a housing extending below said forms and enclosing a portion of said supplying means, a container extending alongside said housing for receiving the wet articles to be dried, said container being spaced from said housing to form an elongated slot at the upper edge of said container, a casing carried by said table beneath said housing and forming an



air chamber communicating with said slot, and means for discharging air under pressure into said chamber.

2,444,784
METHOD OF PREPARATION OF ALKYLATED SILANES
Robert N. Meals, Memphis, Tenn., assignor to General Electric Company, a corporation of New York
No Drawing. Application March 1, 1946, Serial No. 651,421
9 Claims. (Cl. 260—448.2)

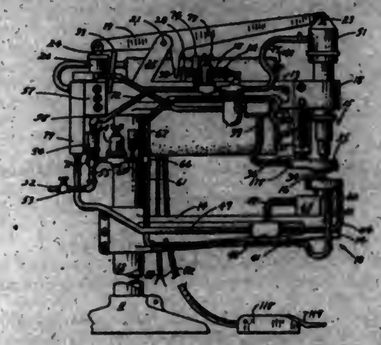
1. The process which comprises effecting reaction under heat, in a liquid polar medium which is essentially inert to the reactants, between (1) a compound represented by the formula LiR and (2) a compound of the general formula $(R')_nSiH_{(4-n)}$ where R and R′ are each a hydrocarbon radical selected from the class consisting of alkyl, aryl, aralkyl and alkaryl radicals, and n is an integer which is at least 1 and not more than 3.



2,444,785
CONTINUOUS DRUM PRINTER FOR MOTION PICTURES
Gerald F. Rackett, Los Angeles, Calif., assignor to Technicolor Motion Picture Corporation, Hollywood, Calif., a corporation of Maine
Application November 2, 1945, Serial No. 626,265
4 Claims. (Cl. 88—24)

1. Apparatus for printing sound tracks on motion picture film comprising a rotary drum having sprocket teeth for positioning the film with one margin projecting beyond the edge of the drum, means for feeding two films in opposite directions along opposite sides of the drum with the films contacting the drum throughout predetermined arcs and with corresponding margins projecting across a diametrical optical

axis, means for adjusting the length of one of said arcs to compensate for film shrinkage, and means for continuously printing a sound track from one film to the other film including a copying lens in said axis between the two films.



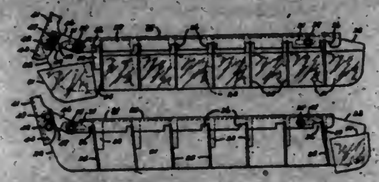
2,444,786
CINEMATOGRAPHIC OPTICAL PRINTER HAVING A TOOTHED REGISTER BELT
Gerald F. Rackett, Los Angeles, Calif., assignor to Technicolor Motion Picture Corporation, Hollywood, Calif., a corporation of Maine
Application November 2, 1945, Serial No. 626,266
11 Claims. (Cl. 88—24)

1. A cinematographic printer comprising an endless belt traveling in a norbital path, the belt having a succession of register teeth projecting outside the orbit for engagement in the sprocket holes of film, spaced drums over which the belt is trained with two opposed portions intermediate the drums, guides engaging said portions to hold them in predetermined spaced relationship, an optical printing system having its optical axis intersecting said path at opposed points in said portions, means for feeding films to the outer side of the belt in advance of said points respectively, and means for feeding said films from the belt beyond said points respectively, whereby images may be printed on one film by projecting records across the orbit from the other film.

2,444,787
MACHINE FOR FORMING MATERIAL
George D. Rechten, Los Angeles, Delbert J. Ward, Sherman Oaks, and Jack H. Watson, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Original application September 7, 1942, Serial No. 457,630. Divided and this application September 20, 1944, Serial No. 555,027
5 Claims. (Cl. 153—21)

1. A sheet metal forming machine comprising: a frame having a work receiving throat and comprising a pair of vertically spaced laterally extending arms; a tool fixed to one of said arms; tool operating means; means for mounting said operating means on the other of said arms for movement toward and away from the fixed tool; a tool carried by said operating means and adapted to be moved by said operating means into working engagement with a sheet of material disposed in said throat; a lever pivotally mounted intermediate the end thereof to the arm carrying said operating means; means interconnecting one end of said lever and said operating means; resilient means normally holding said lever in a position in which the tool carried by said operating means is in an inoperative position; means connected to and adapted to move the other end of said lever in one direction whereby the end connected to said operating means moves in the opposite direction to move said operating means and the tool carried thereby into gradual, unimpacted engagement with a sheet of material disposed in said throat; and means made operative upon the application of a predetermined force resulting from the engagement between the tool carried by said operating means and said sheet

for actuating the latter to cause said tool to percussively impact and angularly form said sheet, with planar and rectilinear surfaces that define a dimple for a flush-type rivet, said resilient means returning said lever to its normal position after the work operation to permit a different area of said sheet to be moved into said throat.



2,444,788
STEEL STRIP TEMPERING
Albert T. Reichenbach, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
No Drawing. Application February 21, 1945, Serial No. 579,152
1 Claim. (Cl. 148—12)

The method of producing steel sheets for tin plating having a surface hardness of at least 61 Rockwell T-30, which comprises the steps of adding nitrogen to open hearth steel in an amount productive of a nitrogen content from 0.006 to 0.011% in the finished steel, the steel otherwise consisting of: 0.05 to 0.12% carbon, 0.25 to 0.60 manganese, maximum of 0.015% phosphorous, maximum of 0.050% sulphur, maximum of 0.010% silicon, maximum of 0.060% copper, maximum of 0.04% nickel, maximum of 0.06% chromium, maximum of 0.02% arsenic, maximum of 0.05% molybdenum, the remainder, iron, hot-rolling the steel to form a strip, cold-rolling the strip to approximately the final gauge thickness of tin plate, annealing the strip whereby its hardness is materially reduced, and temper rolling the strip by only a single pass of the strip through a dry roll temper mill.

2,444,789
ICE CUBE TRAY AND GRID
Donald H. Reeves, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application August 27, 1936, Serial No. 98,213
27 Claims. (Cl. 62—108.5)

1. A freezing apparatus for liquids comprising in combination, a tray having a grid structure removably disposed therein, said grid structure including a longitudinal wall and a plurality of walls extending transversely to said longitudinal wall in spaced apart relation along the length

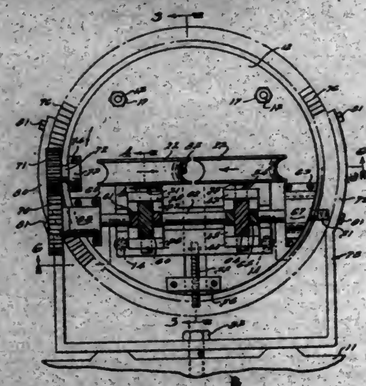
thereof and dividing the interior of the tray into a plurality of ice block compartments, said transverse walls being movably attached to said grid structure, means for elevating said grid structure together with ice blocks adhering

thereto relative to the tray, and means for engaging and applying force to each of said transverse walls to cause movement thereof lengthwise of said longitudinal wall to break the bond between the ice blocks and said grid walls.

2,444,790
TERPENE ISOMERIZATION
Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 13, 1941, Serial No. 393,241
10 Claims. (Cl. 260—677)

7. A method for treating a pinene containing material which comprises passing said pinene containing material through an unfilled tube at a temperature of about 346.5° to 387.6° C., utilizing a time of contact of about 3 to 10 seconds.

2,444,791
FISHING LINE FLOAT
Leslie R. Stahnke, Chicago, and William H. Lannert, Skokie, Ill., assignors to Western Engineering and Tool Design, Chicago, Ill., a corporation of Illinois
Application April 19, 1946, Serial No. 663,498
6 Claims. (Cl. 43—49)



1. A fishing line float embodying therein a buoyant float body having a bore therethrough and a fishing line attaching pin adapted for insertion into said bore from one end thereof, said pin having a portion at one end formed for a relatively snug fit in said end of said bore, and also having a longitudinal line receiving slit therein which divides the remainder of said pin into a relatively long shank part and a shorter shank part permitting a lateral entry of a part of a fishing line into said slit, the free end of said long shank part normally extending beyond the other end of said bore and carrying a lateral projection which is spaced outwardly from and overhangs a part of the body defining said other end of the bore when said pin is in a position in said bore with a portion of said fishing line part clamped between the first mentioned end of said pin and the associated end of the bore.

2,444,792
MOLD FOR FREEZING LIQUIDS AND SEMILIQUIDS
Richard M. Storer, Denver, Colo., assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application March 31, 1936, Serial No. 71,965
18 Claims. (Cl. 62—108.5)

1. In a device of the character described, a mold-element comprising an end-wall member and movable side-wall members, providing a freezing-cell open at one end, and leverage mechanism for effecting a positive tilting movement of the side-wall members independent of the end-wall member, to disrupt their cohesion with ice-blocks in the freezing cell.

2,444,793
APPARATUS FOR GRINDING THE SURFACES OF GROOVED ROLLS
Helmer A. Thorngren, Detroit, Mich.
Application April 26, 1945, Serial No. 590,338
10 Claims. (Cl. 51—105)

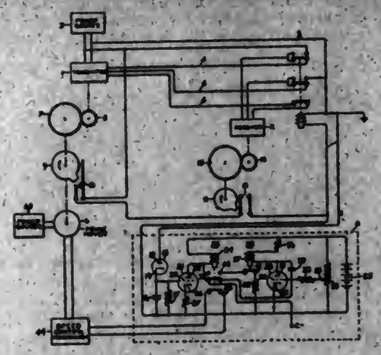
1. In an apparatus for grinding the surfaces of grooved rolls, a support for a pair of rolls to be ground, means for rotating the support about a predetermined axis, means for mounting the rolls on the support so that they will be disposed in planes radial to said axis, means for driving the rolls about their own axes respectively while they are being revolved about the axis of the support, and means for adjusting the rolls radially of the axis of the support.

2,444,794
VOLTAGE STABILIZING SYSTEM
Joseph A. Uttal and Thomas T. Short, Fort Wayne, Ind., assignors to General Electric Company, a corporation of New York
Application February 13, 1945, Serial No. 577,685
2 Claims. (Cl. 323—61)

1. Voltage stabilizing apparatus having, in combination, a linear series effectively inductive reactance through which load current is drawn from a source, said apparatus having an effective non-ohmic shunt capacitive reactance whose current is also effectively drawn through said linear series inductive reactance, the volt-ampere curve

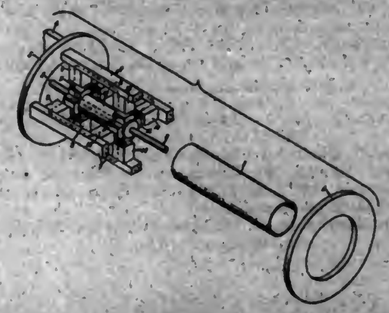
of said shunt reactance being almost parallel to the current axis over its working range and having such a slope that its leading current varies inversely with its voltage, and a linear effectively series capacitive reactance through which said

load current is drawn to the exclusion of the current of said effectively non-linear shunt capacitive reactance, the effective reactance of said series capacitive reactance being of the order of twelve per cent of the reactance of said series inductive reactance.



2,444,795
FACETING HEAD
Leander M. Weir, Hyde Park, N. Y.
Application September 28, 1945, Serial No. 619,225
3 Claims. (Cl. 51—229)

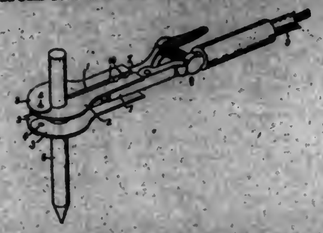
1. A faceting head which includes a vertically adjustable U-shaped yoke the arms of which lie in spaced parallel relation in the same longitudinal plane, a carriage pivotally supported between the arms of the yoke to swing about a horizontal axis, a sectorial plate pivotally supported by the yoke to swing about the horizontal axis, a stop carried by the yoke to limit the pivotal movement of the plate in one direction, a dop stick on the carriage lying along an axis perpendicular to that about which the carriage swings and means adjustably to couple the carriage with the sectorial plate to cause the stop to hold the dop stick at a predetermined angle with relation to the vertical, and means yieldingly to urge the dop stick away from the carriage.



2,444,796
ELECTRICAL SYNCHRONIZING CONTROL SYSTEM
Harry Whalley and George Shand, Sale, England, assignors to General Electric Company, a corporation of New York
Application November 26, 1947, Serial No. 788,100
In Great Britain May 21, 1946
Section 1, Public Law 690, August 8, 1946
5 Claims. (Cl. 318—437)

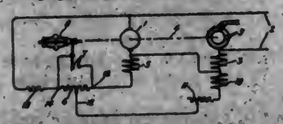
3. In a direct current telemetering system of the step-by-step type, a transmitter, a receiver self-synchronously coupled to said transmitter, means for rotating said transmitter, cam-operated means for deriving a pulse in response to misalignment of said transmitter and said receiver, a synchronizing relay actuated by said pulse for simultaneously decoupling said receiver from said transmitter and arresting said receiver at a reference position for the duration of said pulse, a network comprising a capacitance and a discharge resistance, said network having a time constant long relative to the duration of said pulse, means for charging said capacitance in response to said pulse, and relay means actuated by the discharge of said capacitance for decreasing the speed of said transmitter

for a time interval longer than the duration of said pulse.



2,444,797
MAGNETIC COUPLING
William D. Williams, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application January 28, 1947, Serial No. 724,791
4 Claims. (Cl. 172—284)

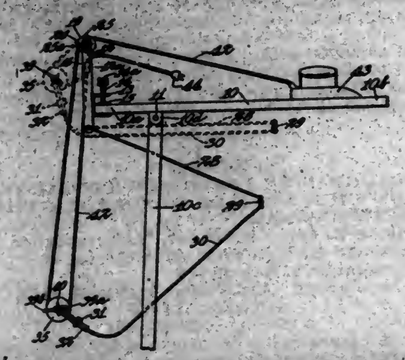
1. A magnetic coupling for transmitting rotary motion through a stationary cylindrical fluid-impervious diaphragm comprising, driving and driven shafts in alignment with the axis of said cylindrical diaphragm, a plurality of substantially U-shaped members permanently magnetized for at least a portion of their length and mounted in angularly spaced relation on one of said shafts with the two legs of each member radially disposed and in axial spaced relation adjacent the exterior of said diaphragm, a pair of axially spaced armatures mounted upon the other of said shafts and positioned within said diaphragm, each said armature comprising a plurality of angularly spaced radially disposed salient poles of magnetizable material, and a yoke of magnetizable material mounted upon said other shaft between said armatures.



2,444,798
ELECTRODE ADAPTER
Wayne E. Wilson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 21, 1946, Serial No. 717,725
5 Claims. (Cl. 219—8)

1. An adapter for carbon electrodes used in arc welding operations with electrode holders having a jaw spread less than that required for holding said carbon electrodes, said adapter comprising cooperating hinged members having, in electrode holding position, overlaying portions provided with internal electrode holding surfaces and external seating surfaces for the jaws of an electrode holder, said external seating surfaces being spaced from one another less than the jaw spread

of said electrode holder when said electrode holding surfaces engage an electrode located and held between said members and at least one of said electrode holding surfaces and one of said external seating surfaces of said members being electrically connected with one another to supply welding current from the jaws of said holder to the electrode clamped between said members.



2,444,799
GENERATION SYSTEM
Winchester R. Wood, Nahant, and Edgar E. Gaudet, West Lynn, Mass., assignors to General Electric Company, a corporation of New York
Application December 14, 1945, Serial No. 634,995
5 Claims. (Cl. 322—16)

1. A regulating system for a motor-generator set including a motor having a shunt connected field exciting winding and a fixed resistance connected in series with said motor field exciting winding, a second resistance connected in series with said motor shunt field exciting winding between said fixed resistance and said motor field exciting winding, means responsive to the speed of said motor for varying said second resistance, a generator, means for driving said generator by said motor, a main field exciting winding for said generator, a second field exciting winding for said generator connected in shunt with said motor shunt field exciting winding through an adjustable connection to said second resistance for regulating the voltage of said generator.

2,444,800
CORD SUPPORTING DEVICE
William Aab, New Ulm, Minn.
Application August 22, 1945, Serial No. 611,992
3 Claims. (Cl. 248—51)

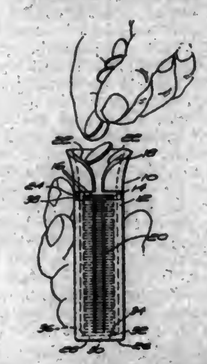
1. A cord-supporting device for an ironing board having in combination, a support constructed and arranged to be clamped to said board, a pulley carried above said board by said support, a link having one end pivoted to said support below said board, an arm having one end secured to the other end of said link, a second pulley carried by said arm adjacent its other end, means on said support for anchoring a conductor cord whereby a conductor cord attached to an iron may pass from said iron over said first mentioned pulley downwardly and around said

second pulley and up to said means, from which it will pass to an electrical socket, said cord being held taut over said first mentioned pulley by the weight of said arm and second pulley.

2,444,801
CREAMING OF SYNTHETIC RUBBER LATICES
Erving Arundale, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 30, 1944, Serial No. 556,659
18 Claims. (Cl. 260—84.5)

1. The process of creaming synthetic latices having a pH of 7–9.5 and containing 20 to 30% solids prepared by the polymerization of a conjugated diolefin of from 4 to 6 carbon atoms per molecule in aqueous emulsion in the presence of a water soluble fatty acid soap emulsifier which comprises adding an aqueous solution containing from 1 to 7 weight per cent of a destabilizing agent selected from the group consisting of inorganic salts of aliphatic amines in which the alkyl group contains 1 to 2 carbon atoms and salts of lithium, sodium, potassium and ammonium to said latices at a temperature of 20–75° C., the total amount of destabilizing agent added being from 1 to 19 parts per 100 parts of latex solids, said amount of destabilizing agent being sufficient to effect a substantial increase in the particle size of the latex but insufficient to cause coagulation thereof, treating the resultant latex with an alkali to render it stable, adding a creaming agent to the treated latex and thereafter effecting a separation between the latex cream and the serum.

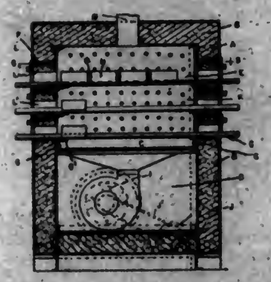
2,444,802
NITROGENOUS RESINS CONTAINING ALKYLENE SULFONATE GROUPS
Robert W. Auten, Jenkintown, and James L. Rainey, Abington, Pa., assignors to The Resinous Products & Chemical Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application July 28, 1945, Serial No. 607,652
6 Claims. (Cl. 260—70)



1. As a new composition of matter, a thermosetting resinous product containing sulfonate groups, obtained by condensing at a pH of 4 to 7, as the essential reactants, (a) urea, (b) an aldehyde from the group consisting of formaldehyde,

acetaldehyde, butyraldehyde, furfuraldehyde, and benzaldehyde, and (c) a water-soluble hydroxyalkane sulfonate having the general formula HO—R—SO_3M, in which R is an alkylene group containing two to four carbon atoms and M is a metal, at a temperature from 60° C. to 105° C., the aldehyde being present in an amount from two to three mols per mol of urea and said hydroxyalkane sulfonate being present in an amount from 0.05 to 0.5 mol per mol of aldehyde.

2,444,803
PHOTOGRAPHIC DEVELOPER CONTAINING DISODIUM SALTS OF MONOHYDRIC PHENOL MONOACIDS
Frederic R. Bean, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application August 27, 1945, Serial No. 613,016
3 Claims. (Cl. 95—88)



1. A photographic developer, in dry form, containing a developing agent and, as an alkali, a disodium salt of a monohydric phenol monoacid selected from the group consisting of salicylic acid, p-phenolsulfonic acid, 2,3-naphthol carboxylic acid, 2-naphthol-7-sulfonic acid, 2,3-cresotic acid (2-hydroxy-3-methyl benzoic acid), and 4-chloro phenol 2-sulfonic acid.

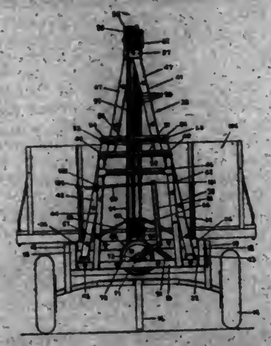
2,444,804
COIN PACKAGING DEVICE
Earl C. Carruthers, Providence, R. I.
Application October 10, 1947, Serial No. 779,175
3 Claims. (Cl. 133—1)

3. A coin packaging device capable of packaging coins of different width and value, comprising a tube, having a side wall of a greater internal diameter than the diameter of the widest coin to be packaged and having a transverse slot of a width greater than that of the widest coin to be packaged at a predetermined spaced distance from the lower end of said device and a flat lower end comprising a wall extending inwardly from said side wall to a center hole of a size to admit a finger and having an annular rim projecting upwardly therefrom at a distance from said hole providing a central recess of a size to contain a coin of less width therein to form a stack of a predetermined number thereof extending upwardly to said slot and a coin of greater width to rest on said rim to form a stack of a different predetermined number thereof extending upwardly to said slot.

2,444,805
FURNACE
Rodney E. Christian, Royal Oak, and Alfred W. Widerstedt, Detroit, Mich., assignors to Kerr Manufacturing Co., a corporation of Michigan
Application June 13, 1945, Serial No. 599,110
1 Claim. (Cl. 34—193)

In a heat treatment apparatus, a casing having aligned apertures in opposite side walls thereof, a trough-shaped member extending through the lower portions of said aligned apertures and the chamber therebetween within said casing, said member constituting a slideway on which molds may be successively placed in alignment with each other, advanced through and in air communication with said chamber and expelled through the aligned aperture in the opposite side wall, means for circulating heated air within said chamber, and perforated spacers adapted to be placed between successive molds for the escape of vapor and liquid therefrom during heat treatment.

2,444,806
SHOULDER STRAP COMBINATION FOR BRASSIÈRES AND FOUNDATION GARMENTS
Ann D. Cleasby, Eau Claire, Wis.
Application June 6, 1946, Serial No. 674,833
1 Claim. (Cl. 2—336)



In a device of the class described, the combination with a garment; of a strap fixedly secured at its ends to said garment, a pair of locker devices on said strap, each locker device having a pair of spaced central bars, pairs of registering lips on said locker device, an elongated shoulder pad, said shoulder pad comprising a pad body provided with reinforced edges, said shoulder pad having its ends threaded over bars in said locker devices with the extreme end under lips in said locker devices, and said strap threaded over the bars of said locker devices and in frictional engagement with said pad.

2,444,807
COPOLYMERS OF VINYL FURANE AND ALPHA-ALKYL ACRYLONITRILE
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application May 20, 1943, Serial No. 487,210
2 Claims. (Cl. 260—84)

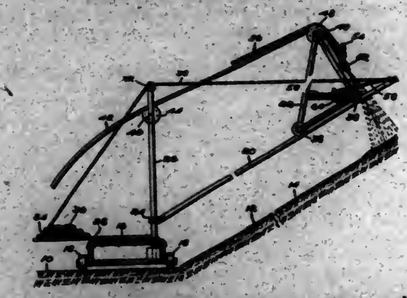
1. A copolymer resulting from the polymerization of a mixture of copolymerizable monomers consisting of 33.33 to 66.66% of vinyl furane, and 66.66 to 33.33% of alpha-alkyl acrylonitrile.

2,444,808
DUMP VEHICLE
Gilbert E. Coats, Fort Dodge, Iowa
Application October 11, 1946, Serial No. 702,766
3 Claims. (Cl. 298—19)

3. A dump wagon assembly including a main frame, a dump frame pivotally mounted at the rear end of said main frame for tiltable movement, means for tilting said dump frame including an upright frame on the forward end of said main frame having a top portion pivotally movable to a first upright position and to a second position inclined forwardly and downwardly, a first pulley means at the upper end of said top portion, a second pulley means on the front end of said dump frame, a winding drum supported on said main frame substantially below said upright frame, a flexible lifting means windable on said drum and movably supported on said first and second pulley means and connected with said upright frame to provide for a lifting of the dump frame on rotation of said winding drum in one direction, means for retaining said flexible means against movement off from said two pulley means when said top portion is in said second position therefor, and means for connecting said winding drum with a source of power supply.

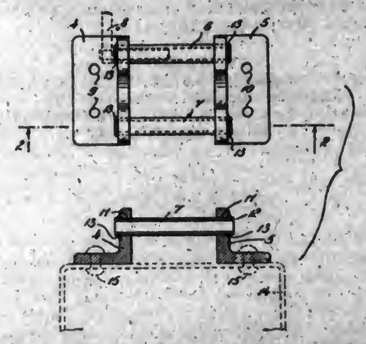
2,444,809
REVERSE FLOW CLEANER
George H. Cranmer, Philadelphia, Pa., assignor to Electrolux Corporation, New York, N. Y., a corporation of Delaware
Application January 11, 1945, Serial No. 572,270
12 Claims. (Cl. 183—37)

1. In a portable domestic suction cleaner the combination of means for producing an air flow, a compartment for removing dust and dirt entrained by air flowing under the influence of said means, means for reversing the flow of air through said compartment, and a pusher mounted within said compartment including an impervious element responsive to reversal of air flow to be moved by such reversal to cause said



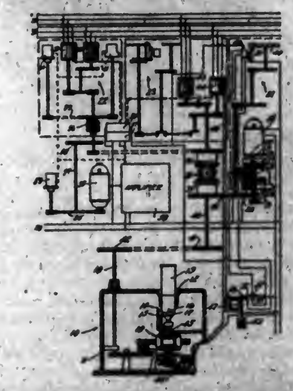
pusher to move in said compartment to eject accumulated dust and dirt therefrom.

2,444,810
SLIDING GAME PIECE
Luther P. Creasy, Catawissa, Pa.
Application October 28, 1946, Serial No. 706,129
1 Claim. (Cl. 273—28)



A game piece comprising a slidable body member including a lower disc and an upper disc removably secured to the lower disc, said discs being substantially of the same thickness and said upper disc being of substantially less diameter than the lower disc and being disposed axially thereof, aligned substantially semispherical pockets in said discs and opening through the upper end lower walls thereof in the provision of opening of substantially less diameter than the pockets, said pockets defining a substantially spherically walled chamber within the discs, and a ball loosely supported in said chamber for projection through the opening in said lower disc and having numbers thereon observable through the opening in the upper disc.

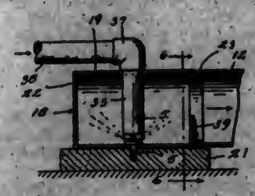
2,444,811
GROUT PROJECTING APPARATUS
John M. Crom, Washington, D. C.
Application June 16, 1944, Serial No. 540,659
6 Claims. (Cl. 61—63)



1. In a grout projecting apparatus, a vehicle adapted for movement along a predetermined path, a track carried by the vehicle and projecting laterally therefrom, a carriage on and movable along the track beyond the vehicle, a platform on the carriage for supporting an operator, a grout conducting conduit including a flexible hose rearwardly of and supporting a nozzle on its free end, and means on the vehicle above the track and platform supporting the hose depending therefrom and longitudinally movable relative thereto and with the nozzle supported solely by the hose and freely movable therewith relative to and independently of the carriage, the nozzle being adapted to be manually guided and directed by an operator on the platform.

2,444,812
CONVEYER CHAIN
John A. Crowley, Jr., Scarsdale, N. Y., and William D. Macgeorge, Drexel Hill, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application September 24, 1943, Serial No. 503,644
1 Claim. (Cl. 198—151)

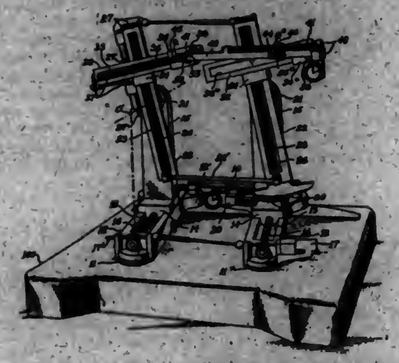
A unitary bucket carrying link for use in a bucket chain conveyor comprising two angular side bars each presenting a bucket-supporting face and an upstanding flange extending away from the bucket-supporting face, and two knuckle pins, one mounted between each end of said side bars, the said knuckle pins being formed of tubes extending through drilled holes in the upstanding flanges of said side bars and slightly beyond the external faces of said flanges and being rigidly attached to said flanges by welds extending substantially completely around the exterior ends of said knuckle-pins.



2,444,813
SERVO CONTROL SYSTEM
Frederick W. Cunningham, Stamford, Conn., assignor to Arma Corporation, Brooklyn, N. Y., a corporation of New York
Application November 2, 1945, Serial No. 626,406
17 Claims. (Cl. 89—6)

1. In an electro-mechanical servo-control system adapted to be actuated in accordance with the movements of remote self-synchronous transmitting means, the combination of a driven member, means for driving said driven member, a transformer having a stator winding energized by said transmitting means and a rotor winding inductively coupled to said stator winding, a servo-motor electrically connected to said rotor winding for energization in accordance with the voltage induced therein, a differential interposed between said driven member and the means for driving the same, and operative connections between said servo-motor and said differential for modifying the drive of said driven member by said driving means in accordance with signals transmitted by said transmitting means.

16. In an electro-mechanical servo-control system for setting fuses on shells equipped with fuse slots or their equivalent in accordance with the movement of a remote self-synchronous fuse-angle transmitting means, the combination of a shell nose receiving pot, relatively rotary pawls thereon for engaging the shell fuse slots, a motor for driving said fuse pawls around the nose of the shell for engagement with the corresponding fuse slots thereon, a switch in the circuit of the motor for energizing the same, means responsive to the insertion of a shell nose in said pot for actuating said switch, timing means driven by said motor for controlling the angle of rotation of said pawls, a high-speed transformer and a low-speed transformer each having a stator winding energized by said fuse angle transmitting means and a rotor winding inductively coupled to the corresponding stator winding, a servo-motor alternatively energized by the voltage induced in one of said stator windings, gearing connecting the rotor windings of said transformers, a two-way switch interposed between the rotor winding and said servo-motor, a relay responsive to asynchronism between one of said transformers and said transmitting means for actuating said switch to shift the connection of said servo-motor from one to the other rotor windings, operative connections between said servo-motor and said gearing for driving the active rotor winding to non-inductive relation with its corresponding stator winding, a differential interposed between said motor and servo-motor and having an output, and operative connections between said differential output and said fuse pawls for setting the fuse slots on said shell in accordance with transmitted fuse angle after said pawls are engaged by said motor with said fuse slots.



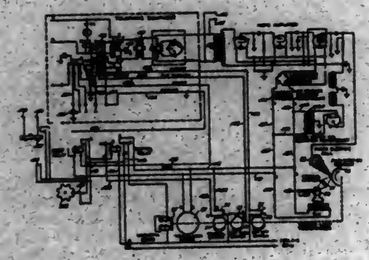
2,444,814
OIL BURNER FOR TOBACCO DRYING AND CURING MEANS
William B. Dewiess, Abbottsburg, N. C.
Application November 19, 1945, Serial No. 629,379
3 Claims. (Cl. 158—91)

1. In a tobacco curing system, a burner comprising a cylindrical housing, a fuel nozzle in the bottom of said housing formed of a hollow body having a plurality of upwardly and outwardly directed jet openings, an air intake tube extending downwardly through one side of said housing

and terminating above said nozzle, a diametrically disposed bar fixedly carried by the lower end of said tube, said bar having a central opening, and a conical pin carried by said nozzle coaxially thereof engaging in said opening for supporting said tube with the lower end thereof spaced above said nozzle and out of the path of the fuel ejected through said jet openings.

2,444,815
STEREOSCOPIC MAPPING INSTRUMENT
Theodore M. Edison, West Orange, N. J., assignor to American Geographical Society of New York, New York, N. Y., a corporation of New York
Application July 29, 1943, Serial No. 496,611
19 Claims. (Cl. 33—1)

1. In a stereoscopic mapping instrument: the combination comprising a pair of picture-holding goniometers mounted for angular movements about two respective fixed points, index-mark means, including two index marks, movable in a plurality of directions respectively parallel to the reference axes of a Cartesian coordinate system, means for indicating the effective position of said index-mark means in said system in terms of coordinate distances measured from said reference axes, means for orienting said system in two degrees of angular freedom relative to a line extending between said fixed points while maintaining constant the effective position of one of said fixed points in said system, and means, effective throughout the operation of said orienting means, for maintaining said index marks always on a line parallel to a straight line passing through both of said fixed points.



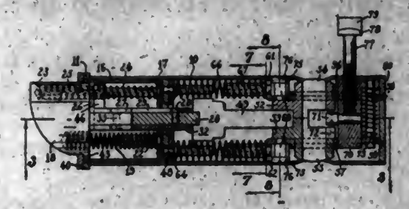
2,444,816
PRODUCTION OF ACETOPHENONE
William S. Emerson and Victor E. Lucas, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application March 14, 1945, Serial No. 582,802
5 Claims. (Cl. 260—592)

1. The process for producing acetophenone which comprises passing an oxygen containing gas through liquid ethylbenzene containing an oxidation catalyst, whereby oxidation products of ethylbenzene are formed, thereupon adding to said ethylbenzene, methylphenyl carbinol and then further oxidizing said ethylbenzene to form acetophenone.

2,444,817
PROCESS FOR POLYMERIZING VINYL COMPOUNDS AND PRODUCTS FORMED THEREBY
Reid G. Ferdyce, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application March 7, 1945, Serial No. 581,554
8 Claims. (Cl. 260—78.5)

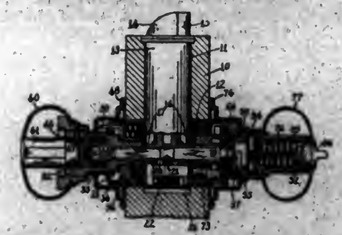
1. The process which comprises polymerizing in mass a mixture consisting of vinyl acetate and an ester selected from the class consisting of the diallyl and dimethallyl esters of maleic, fumaric, succinic and adipic acids and in which mixtures said esters are contained in amount of from 20% to 50% by weight of polymerizable material in said mixture, by heating said mixture in the presence of from 2½% to 4% by weight based on said mixture of benzoyl peroxide.

2,444,818
ANNOUNCING MACHINE AND SYSTEM
John L. Franklin, Atlanta, Ga.
Application February 9, 1945, Serial No. 577,097
11 Claims. (Cl. 177—351)



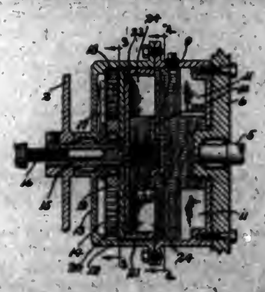
1. In an announcing machine, in combination: a revoluble record carrier; a plurality of rigid record supports each conforming to the surface of a cylinder and slidably mounted on said carrier for selective movement parallel with the axis of the carrier; a plurality of sound records mounted on each said support; the ends of each terminating in a plane through the axis of said carrier whereby selective relative movement between said supports may bring the ends of any two records on adjacent supports into registry for production of a continuous announcement by successive reproduction thereof; sound reproducing means operable over a definite path about the cylindrical surface including said record carriers; and means to cause relative movement between said reproducing means and said carrier to successively reproduce sounds from the records selectively brought into said path.

2,444,819
DOOR LOCK
John B. Freyainger, Hamden, Conn., assignor to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application January 27, 1945, Serial No. 574,920
12 Claims. (Cl. 292—169)



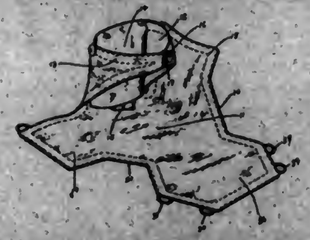
3. A lock comprising a main case open at its forward end and having bolt-retracting mechanism therein, a bolt case slidably received in the open end of the main case and having a bolt

therein, means connecting said bolt with the bolt-retracting mechanism, and a face plate se-



cured to the main case and retaining the bolt case therein.

2,444,820
DOOR LOCK
John B. Freysinger, Hamden, Conn., assignor to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application May 21, 1945, Serial No. 595,020
11 Claims. (Cl. 70—449)

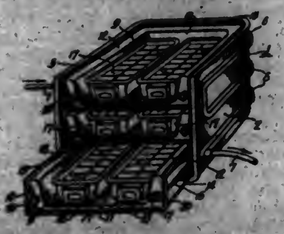


1. A door lock comprising a casing insertable through the edge of the door, a second casing insertable into an opening through the face of the door and extending transversely of said first casing, means for rigidly securing said casings together, both of said casings being of substantially cylindrical shape, a bolt and bolt-actuating mechanism in said first casing, said mechanism including rollbacks rotatably mounted in the first casing, inner and outer knob members having shank portions rotatably carried by the ends of said second casing, and a spindle structure connecting said knob members with the rollbacks.

2,444,821
VARIABLE-SPEED MOTOR
Benedict R. Gerulis and Henry Garvelink, Grand Rapids, Mich.
Application September 23, 1946, Serial No. 698,650
4 Claims. (Cl. 172—36)

2. In an electric motor, a casing having vertical end closures therefor, a rotor having a horizontal shaft extending from both ends thereof, one end portion of the shaft extending through one end of the casing and having a rotatable mounting thereon, a stator within which the rotor is located including a frame having spaced vertical ends one end of which said end portion of the shaft extends therethrough, said stator at said end thereof being rotatably mounted on the shaft, the other end portion of the shaft extending to the opposite end of the stator, means for rotatably mounting the other end of said shaft on said last mentioned end of the stator, a housing having liquid therein secured to the last mentioned end of the stator, said housing at one end and within it having a plurality of spaced radial vanes, a rotatable member having a plurality of spaced radial vanes extending toward the first located within the housing, means for mounting said member for rotation, means for rotatably mounting the housing at its outer end on the casing, means for adjusting said second mentioned vanes toward and away from the first mentioned vanes, and means for driving said last mentioned vanes by said housing in a direction opposite to the rotative movement of the stator and housing, to thereby vary the rotation of the rotor, progressively increasing said rotation as the rotatable vane carrying member and the vanes thereon are moved toward the first mentioned vanes.

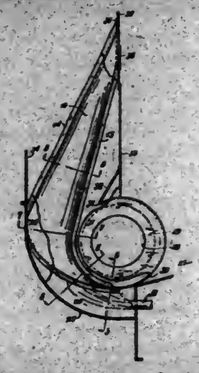
2,444,822
BOOTEE
Emma E. Griffin, New York, N. Y.
Application May 2, 1946, Serial No. 666,696
1 Claim. (Cl. 36—11)



A blank of flexible material for a baby bootee comprising a generally rectangular mid-portion, laterally extending generally right triangular flaps having their bases connected to said blank mid-portion at opposite sides thereof and their right angularly related sides in alignment with one end of said blank, said flaps being adapted to form ankle straps converging upwardly for securement of their corners together at the front of the angle, a rectangular strip connected to said blank between the bases of said triangular flaps and joined to the blank at its sides and at said one end of the blank to form a pocket, cushioning material in said pocket, a second pair of flaps connected on opposite sides of said blank mid-portion substantially contiguous with said triangular flaps, said second pair of flaps having generally rectangular outer end portions and inwardly and forwardly converging edges on the sides farthest from said ankle strap flaps, a substantially hexagonal flap connected to said blank mid-portion adjacent to said converging edges, the end of the blank mid-portion between said converging edges forming one of the sides of said hexagonal flap, means for securing the corners of the triangular ankle flaps together, means for securing the rectangular ends of said second pair of flaps to said angle straps to form the sides of a bootee, and means for securing said hexagonal flap in substantially matching overlapping relationship to the inwardly and forwardly converging edges of said second pair of flaps to form the toe covering portion of said bootee.

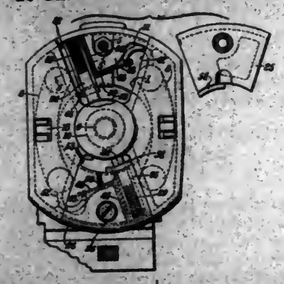
2,444,823
RECOVERY OF PENTOSES AND HEXOSANS FROM WOOD LIQUORS
Horace E. Hall, Lyle, Tenn., and Lester L. Coleman, Wilmington, Del., assignors to Masonite Corporation, Laurel, Miss., a corporation of Delaware
No Drawing. Application March 31, 1944, Serial No. 529,037
6 Claims. (Cl. 195—11)

1. Process of treating acid solutions containing pentosans and hexosans, which comprises inoculating the solution with *Aspergillus niger*, allowing fermentation of the solution to go forward which selectively hydrolyzes the pentosans to pentoses and leaves the hexosans substantially unchanged, incorporating with the solution a water miscible organic solvent selected from the group consisting of acetone, ethers and lower aliphatic alcohols which precipitates the hexosans while the pentoses remain in solution, and removing the hexosans from the solution.



2,444,824
REFRIGERANT EVAPORATOR
Russell M. Hall, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 29, 1944, Serial No. 565,751
9 Claims. (Cl. 62—126)

1. An evaporator comprising a housing structure including refrigerant flow channels, and a plurality of shelves detachably mounted in said housing and acting jointly to shield substantially the entire inner surface of the housing against exposure to moisture and resultant rapid frost accretion.



2,444,825
HEAT EXCHANGE ELEMENT
Frank R. Higley, Cleveland Heights, Ohio, assignor to Bryant Heater Company, a corporation of Ohio
Application November 19, 1943, Serial No. 510,862
3 Claims. (Cl. 257—245)

1. A sheet metal heat exchange element for the purpose described, symmetrical about a central plane, a portion of said element being formed to constitute a tubular conductor with a cross section elongated in the direction of said plane, and a portion extending laterally thereof and transversely therefrom to form an offset base for connection with the bases of similar elements, said base portion comprising a warped surface extending divergently from said tubular conductor and thence transversely beyond the conductor, and comprising also an intermediate portion of substantial area having divergently related walls effecting anticlastic characteristics

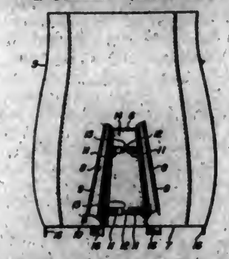
merged with the tubular conductor and said walls having gradually increasing divergence decreasing in height away from said conductor until attaining disposition in a straight laterally extending line.

2,444,826
BRUSH ASSEMBLY FOR DYNAMOELECTRIC MACHINES
Reynold Happe, Pittstown, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application April 23, 1945, Serial No. 589,846
10 Claims. (Cl. 171—252)

1. In a dynamoelectric machine, an end-cover, a brush holder recessed within said end-cover and having an open side, a brush seated within said holder and having an exposed side, and a closure element of insulating material removably secured to said end-cover to close the open side of said brush holder to retain said brush therein, a portion of said closure element being, when in place, spaced from a portion of said end-cover to provide an opening through which air may enter or leave said machine.

2,444,827
NITROMETHANE-ACETONE-ADIPIC ACID CONDENSATION POLYMER
Albin Johnson, Delmar, N. Y., assignor, by mesne assignments, to Tek Hughes, Inc., a corporation of New York
No Drawing. Application August 5, 1946, Serial No. 688,429
6 Claims. (Cl. 260—63)

1. That step in the method of making a synthetic polymer in the form of a flexible filament



which comprises subjecting the following ingredients in about the proportions set forth to a condensation polymerization treatment until filaments can be drawn therefrom:

Ingredient	Gram Molecules
Nitromethane	2
Acetone	1 to 2
Adipic Acid	1

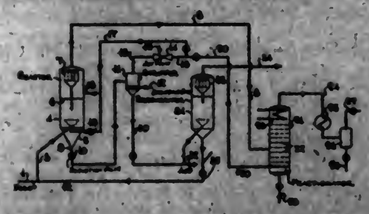
2,444,828
MANUFACTURE OF NITRILES
William Kaplan, Brooklyn, N. Y., assignor to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application February 12, 1946, Serial No. 647,218
15 Claims. (Cl. 260—465.1)

1. A process of making high molecular weight fatty nitriles in substantially 100 per cent yield, which comprises heating cyanuric acid at above 250° C. and below approximately 310° C. with a fatty acid in the ratio of approximately 1–2 mols of cyanuric acid per mol of fatty acid.

2,444,829
FOUNDATION GARMENT
Harriet G. Karcher, Snyder, N. Y.
Application March 6, 1946, Serial No. 652,287
1 Claim. (Cl. 2—38)

In a foundation garment, a back having a substantially horizontal lower edge and provided with a centrally disposed T-shaped slit, the vertical portion of said slit extending upwardly from said lower edge, the transverse portion of said slit being substantially parallel to said lower edge, and rectangular portions of said back bordered on three sides by the transverse and vertical portions of said slit and by said lower edge constituting uniformly rollable flaps.

2,444,830
ADHESIVE SHEET AND METHOD OF MAKING
Waldo Kellgren, St. Paul, Hubert J. Tierney, Mahtomedi, and Richard Gurley Drew, St. Paul, Minn., assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application April 4, 1938, Serial No. 199,942
20 Claims. (Cl. 154—136)

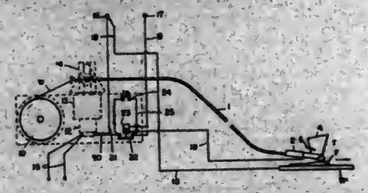


1. As a new article of manufacture, a laminated pressure-sensitive adhesive tape substantially transparent to reflected light when mounted upon a surface, which comprises a pliable, non-fibrous, transparent backing; and an integral multi-layer adhesive coat attached thereto, said coat comprising a first layer of a substantially transparent, pressure-sensitive, adhesive composition; a thin, unsized, unfilled, porous paper overlying said first layer; and a second layer of a substantially transparent, pressure-sensitive, adhesive composition overlying said paper; said adhesive compositions impregnating said paper from both sides and holding said paper in suspension therein as a strengthening bond to form therewith an integral, multi-layer adhesive coat, thereby providing a laminated adhesive tape having an unusually firm bond between the backing and the adhesive coat and being transparent to reflected light when mounted upon a surface.

2,444,831
EXTRUDING APPARATUS
Karl B. Kilbern, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application June 19, 1944, Serial No. 540,953
3 Claims. (Cl. 18—13)

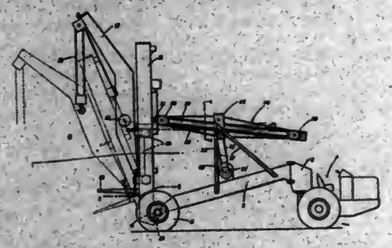
1. An extrusion means for forming a composite strip of plastic material embodying portions having different physical characteristics, said extrusion means comprising a main body member having a generally V-shaped chamber therein defined by plane wall surfaces extending from an opening spanning the V to an opening at the apex thereof; shaping means on the main body member adjacent the apex opening; a removable generally wedge-shaped cavity block, the inclined walls of which contact the plane wall surfaces of the chamber; and a plurality of grooves formed in the inclined walls of the cavity block cooperating with the plane wall surfaces of the main body member to define a series of individual passageways leading to the apex opening in the chamber.

2,444,832
METHOD OF REMOVING VAPOROUS REACTANTS FROM CATALYST USED IN HYDROCARBON CONVERSION
Robert W. Krebs, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 30, 1944, Serial No. 570,731
2 Claims. (Cl. 196—52)



2. In a process for the conversion of hydrocarbon oils wherein finely divided catalyst is continuously circulated through a conversion zone wherein it is contacted with hydrocarbon oil vapors to be converted and thereafter circulated through a regenerating zone wherein carbonaceous deposits contained on said catalyst are burned therefrom and the regenerated catalyst thereafter returned to said conversion zone; the improvement in the method of removing vaporous conversion products from the catalyst passing from said conversion zone to said regeneration zone which comprises maintaining said conversion zone under superatmospheric pressure, passing a stream of said finely divided catalyst from said conversion zone to a separating zone maintained at subatmospheric pressure, releasing pressure on the finely divided catalyst passing from said conversion zone to said separating zone, separating vaporous reaction products from said catalyst in said separating zone, collecting solids so separated in a collecting zone in free and open communication with said separating zone, passing a stripping gas upwardly through said collecting zone to remove additional vaporous reaction products from said finely divided solids in said collecting zone and combining the stripping gas with vaporous reaction products removed from said solids in said separating zone.

2,444,833
METHOD OF ASSEMBLING ZINC-LINED CONTAINERS
Albert J. Lampert, Sparrows Point, Md., assignor to Rheem Manufacturing Company, Richmond, Calif., a company of California
Application March 17, 1944, Serial No. 526,891
3 Claims. (Cl. 29—162)



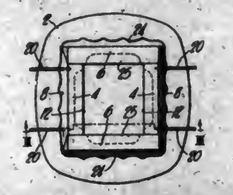
1. The method of making a container of weldable metal which comprises uniting to the body member of the container an end member having a peripheral flange tightly fitting one end of the body member, applying a protective zinc coating to the interior of the body member and said end member, tightly fitting the peripheral flange of another flanged end member, the interior surface of which has a protective zinc coating, into the other end of the body member with the exposed surfaces of the tightly fitting contact between the flange and the body members on the outside of the container, and simultaneously uniting the flange of said other end member to the body member by electric resistance seam welding through the protective zinc coating in the tight-fitting contact between the flange of that end member and the body member and melting the zinc coating in said tight-fitting contact adjacent said weld, whereby on resolidification of such melted zinc a zinc bond and seal will be formed between the body member and the flange of said other end member which will further assure a leakproof joint being formed.

2,444,834
HIGH-SPEED ARC WELDING
George G. Landis, South Euclid, and Norman J. Hoenie, Cleveland Heights, Ohio, assignors to The Lincoln Electric Company, Cleveland, Ohio, a corporation of Ohio
Application June 2, 1944, Serial No. 538,366
7 Claims. (Cl. 219—10)

7. In a method of arc welding wherein an arc is established between a metallic work-piece and the end of a metallic electrode, the steps which comprise striking an arc between the end of such electrode and work-piece and thereupon continuously feeding such electrode to such work-piece while continuously imposing on the terminal portion of such electrode an arc welding current of sufficiently high density to produce more heat by the resistance heating of such terminal portion than is absorbed by such portion from the arc at such electrode end.

2,444,835
POWER-ACTUATED CRANE
Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California
Application September 3, 1946, Serial No. 694,480
7 Claims. (Cl. 212—8)

1. A tilt control assembly for a crane including a longitudinally extending body and an upstanding frame mounted on the body for tilting adjustment in a plane lengthwise thereof; said assembly comprising a tilt control beam connected to the upstanding frame above and extending lengthwise of the body, means on the body supporting the beam for guided longitudinal motion, and power means connected to the beam operative to impart reversible longitudinal motion thereto; said power means including opposed block and tackle cable systems connected between opposite end portions of the beam and said supporting means intermediate said end portions of the beam.



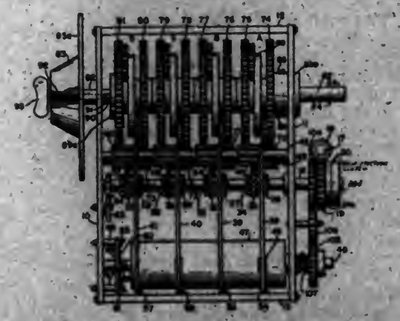
2,444,836
DETERGENT BRIQUETTE
James Douglas MacMahon, Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application March 18, 1948, Serial No. 15,720
9 Claims. (Cl. 252—138)

1. A detergent briquette physically stable, hard, strong and non-deliquescent, consisting of a dense crystalline aggregate consisting essentially of the following constituents in proportions by weight within the respective indicated ranges: total water about 30–50%, at least one detergent of the group consisting of sodium carbonate and trisodium phosphate aggregating from about one-tenth to about one-half the total formula weight, about 1–30% of a sodium borate, up to about 50% of a sodium polyphosphate including not more than about 15% of the polyphosphate of the group consisting of sodium tetraphosphate and sodium hexametaphosphate, and about 0.25–5% of a non-saponaceous alkali-stable organic synthetic detergent.

2,444,837
DETERGENT BRIQUETTE
James Douglas MacMahon, Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application July 21, 1945, Serial No. 606,484
7 Claims. (Cl. 252—135)

1. A detergent briquette physically stable, hard, strong and non-deliquescent, consisting of a dense crystalline aggregate consisting essentially of the following constituents in proportions by weight within the respective indicated ranges: total water about 30–50%, at least one detergent of the group consisting of sodium carbonate and trisodium phosphate aggregating from about one-tenth to about one-half the total formula weight, and about 1–30% of a sodium borate.

2,444,838
SECTIONAL HOT TOP
Edgar Marburg, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application April 3, 1947, Serial No. 739,141
5 Claims. (Cl. 22—147)



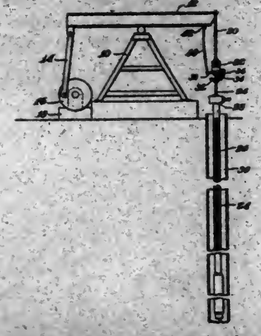
1. A sectional hot top for a mold comprising two side and two end slabs of refractory material, means for supporting the side slabs on opposite sides of the mold, each of said side slabs having a pair of shoulders on each end, one of said shoulders tapering downwardly and inwardly toward the opposite side slab, the second of said shoulders extending downwardly and outwardly toward the adjacent end wall of the mold, the end slabs being located on opposite ends of the mold, each of said end slabs having a pair of wedge surfaces on each end, one of said wedge surfaces being complementary to and in contact with the first of said shoulders of the side slabs, and the second of said wedge surfaces being complementary to and in contact with the second of said shoulders whereby the bottoms of all the slabs are forced into contact with the mold wall.

2,444,839
DROP-FOOT BRACE
Raymond F. Markuis, Los Angeles, Calif., assignor to American Braces, Oakland, Calif., a partnership
Application July 21, 1945, Serial No. 606,351
5 Claims. (Cl. 128—80)

1. A drop-foot brace comprising a heel piece having bottom and back portions angularly disposed to approximately conform to the heel portion of a shoe, means for securing the heel piece to the shoe, a brace pivotally connected to the heel piece and extending upwardly therefrom for engaging a wearer's leg, and a leaf spring secured to one of the pivotally connected parts and extending into slidable engagement with the other part at points upon opposite sides of the pivot and spaced therefrom, said pivot and spring providing a lock against movement about the pivot in one direction and permitting a limited yielding movement in the other.

2,444,840
AUTOMATIC TUNING CONTROL FOR RADIO APPARATUS AND THE LIKE
Richard W. May, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application October 29, 1946, Serial No. 706,453
19 Claims. (Cl. 74—10)

1. An automatic shaft positioning device for radio systems and the like, comprising a shaft to be selectively positioned, a plurality of selectively operable shaft stopping units connected to said shaft each unit including a pair of oppositely rotatable members whose conjoint rotation to a mutual stopping position determines the extent of rotation of said shaft, and means to render a selected one of said units effective, the last-mentioned means comprising a power driven shaft, a cam drum having a series of cam surfaces one for each of said units, and a selectively shiftable pawl one for each cam surface for conveying driving power from said shaft to the selected one of said units.

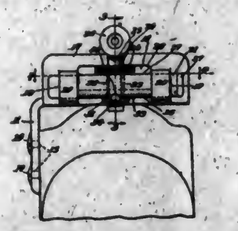


2,444,841
CLOTHESLINE HOLDER
Anthony J. Meronk, Jefferson, Wis.
Application June 25, 1945, Serial No. 601,505
1 Claim. (Cl. 211—119.15)

A clothesline support and tightener comprising a tubular housing of rectangular cross section having a longitudinally extending clothesline-receiving slot through one side, an extension projecting from one end of the side of the housing opposite the slotted side thereof, said extension having a supporting hook-receiving opening therein, a pair of clothesline-engaging clamp jaws mounted in said housing adjacent the end thereof remote from the extension to swing about spaced parallel axes which lie on opposite sides of and in a plane perpendicular to the longitudinal axis of the slot, a slide mounted in said housing to move longitudinally with relation thereto, means connecting the clamp jaws with the slide to cause the clamp jaws to advance toward one another as the slide moves away from the extension, a flange on the end of the slide remote from the extension and said flange having a V-shaped notch therein which registers with the longitudinal slot in the housing for receiving a clothesline whereby, as the load imposed on the clothesline increases, the slide will move and increase the pressure of the clamp jaws on the clothesline.

2,444,842
POLISH ROD HANGER
Theodore De Witte, McConahey and Fredrick Charles Redell, Borger, Tex., assignors to J. M. Huber Corporation, Borger, Tex., a corporation of New Jersey
Application April 10, 1947, Serial No. 740,640
3 Claims. (Cl. 255—14)

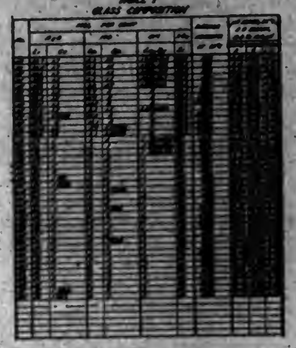
1. A polish rod hanger adapted to support a polish rod and to impart a reciprocating motion to the rod while permitting rotation of the rod, which comprises a housing; means for vertically reciprocating the housing; the housing having an enlarged central vertical cylindrical bore extending downward from the top of the housing and terminated, at a point spaced from the bottom of the housing, by an inturned annular flange; an outer annular thrust bearing race supported on the upper surface of the flange and fitted tightly to the inner surface of the bore of the housing; an inner annular thrust bearing race positioned opposite the outer race; the upper surface of the flange being spaced slightly below the opposing lower surface of the inner race to provide a passage for lubricant between the flange and the inner bearing race; rolling bearing members between the races; a slip bowl supported on and fitted tightly to the inner bearing race and having an outer cylindrical surface slightly smaller than the enlarged bore of the housing so as to provide a space for lubricant between such surface and the housing, and its upper end spaced below the top of the housing, the lower surface of the bowl being spaced slightly above the opposing upper surface of the outer bearing race to provide a passage for lubricant between the lower surface of the bowl and the outer bearing race; a passage for lubricant between the races, communicating with and connecting the lubricant passage above the outer race and the lubricant passage below the inner race; slips for releasably gripping a polish rod, positioned wholly within the slip bowl and fitted therein so as to cause the slip bowl to rotate therewith; closure means at the top of the housing above the slip bowl for retaining the slip bowl and slips within the housing, provided with packing to prevent the passage of water into the housing and the passage of lubricant out of the top of the housing; closure means at the bottom of the housing provided with packing to retain lubricant in the housing; and a normally closed lubricant inlet in a wall of the housing.



2,444,843
ELECTRICAL PLUG AND SOCKET CONNECTOR WITH RETRACTABLE CONTACTS
Henry John Modrey, London, England, assignor to Modrey Patents Corporation, Essex County, N. J., a corporation of New Jersey
Application September 7, 1944, Serial No. 553,848
In Great Britain August 27, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires August 27, 1963
3 Claims. (Cl. 173—328)

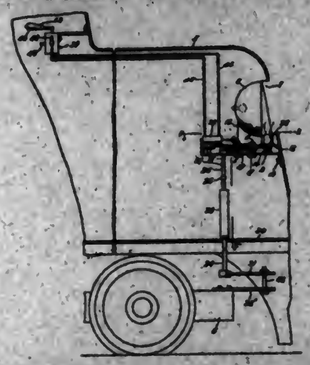
1. An electrical plug and socket connector comprising plug and socket contact elements and casings therefor, the plug element being retractable relative to its casing and held in the retracted position when the elements are out of engagement, said elements being so arranged and constructed that when they are applied one to the other the plug element is projected from its casing into circuit establishing engagement with the socket element, and locking means positioned

within and separated from the plug casing for locking the plug to the socket when the elements are in circuit establishing engagement, said locking means comprising a clamping rod with a clamping head, a wedging stud in slidable engagement with the clamping rod, yieldable means tending to press the wedging stud towards the clamping head, and a co-operating socket plate with an opening substantially of the joint cross-section of the operative portions of the clamping rod and the wedging stud.



2,444,844
GUN SIGHT
Ernest C. Neal, Chicago, Ill., assignor of one-half to George H. Neal and one-half to Carl Jacobsen, Portland, Oreg.
Application January 31, 1944, Serial No. 520,402
11 Claims. (Cl. 33—56)

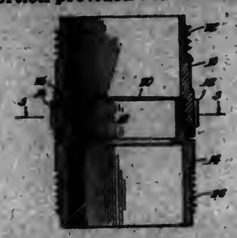
2. A gunsight assembly comprising a supporting frame, a gunsight mounted on the frame for movement in horizontal and vertical directions, means operable adjustably to move the gunsight in one of said directions and including a manually movable member mounted on the frame for slidable movement in generally parallel relation to the frame and operatively connected with the gunsight to cause movement of the gunsight corresponding to the movement of the member, means operable adjustably to move the gunsight in another of the said directions including means adjustably mounted on the frame and the member, and means operable adjustably to secure the gunsight in a selected position of adjustment including a spring member mounted on the frame and arranged to operate normally to engage a portion of the movable member whereby to restrict movement of the member and the gunsight in one of the said directions and to urge the member in the other direction, and means cooperating with said member when moved in the last said direction, to restrict operation of the said member and the correlative movement of the gunsight in the other of the said directions.



2,444,845
pH-RESPONSIVE GLASS ELECTRODE
George A. Perley, Wyncote, Pa., assignor to Leeds and Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 9, 1946, Serial No. 668,393
8 Claims. (Cl. 204—195)

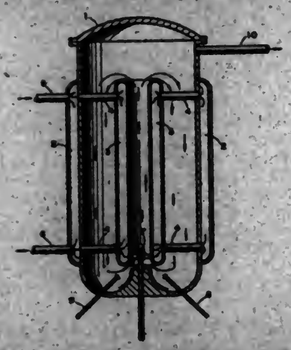
8. A pH-responsive electrode of glass having a sodium error not exceeding 1 pH at 2N sodium at 12.6 pH at temperature 25° C. to 35° C., whose voltage/pH characteristic is reproducible throughout the range 0 pH to 14 pH, and whose composition is represented by a prefusion mixture consisting af silica, lithia, at least one alkaline earth metal oxide, and at least one of the oxygen modifiers of the group consisting of TeO_2,

P_2O_5, TiO_2, ZrO_2, As_2O_5, Cb_2O_5, Ta_2O_5, ThO_2, B_2O_3 and the rare earth metal oxides.



2,444,846
DIRIGIBLE HEADLIGHT DEVICE
Edward J. Potts, Stone Mountain, Ga.
Application April 26, 1945, Serial No. 590,355
4 Claims. (Cl. 240—61.2)

1. In combination with the body, the engineer's cab and the swiveled front truck of a locomotive, a horizontal bracket mounted on the locomotive body, a headlight support mounted on said bracket to turn about a vertical axis, means operatively connecting said truck to said headlight support including a truck-actuated member mounted between said bracket and said support to turn about said vertical axis and a releasable element normally connecting said member to said support, manually controlled power-operated means for releasing said element, and a motor mounted on said bracket, said motor being manually controlled from the engineer's cab and operatively connected to said support for selectively turning said support in either direction.

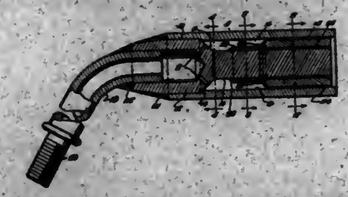


2,444,847
COUPLING THREAD LOCKING MEANS
Ougijena Jules Poupitch, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a corporation of Illinois
Application October 30, 1944, Serial No. 560,966
1 Claim. (Cl. 285—145)

In a pipe coupling for conduits which is to be coupled and uncoupled a considerable number of times during use, the combination of a relatively thin walled short pipe section having adjacent one end exteriorly formed threads for connection to a pipe or conduit and adjacent the other end interiorly formed threads, and a second relatively thin walled short pipe section having adjacent one end exteriorly formed threads for connection to a pipe or conduit and having adjacent the other end portion provided with exteriorly formed

threads for cooperation and engagement with the interiorly formed threads of said first pipe section, said latter threaded portion having adjacent the end a helical slit extending for a fraction of the circumference in the direction of the threads, that portion of the material between said slit and the end of said member having its threads displaced an amount sufficient to provide a resilient tension locking action for the assembled pipe sections whenever coupled together.

2,444,848
CONTINUOUS POLYMERIZATION OF ISOBUTYLENE
Robert L. Purvin, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 13, 1944, Serial No. 544,669
1 Claim. (Cl. 260—94)



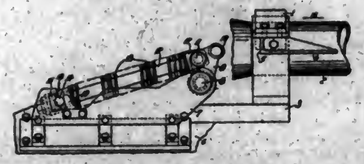
In the catalytic polymerization of isobutylene in the presence of an aluminum halide in which there is employed an isobutylene feed containing impurities which retard the initiation of polymerization and in which, during stable operation, isobutylene feed containing a predetermined content of isobutylene is continuously introduced into a reactor, aluminum halide is continuously fed into the reactor and product is continuously withdrawn, the reactor at all times containing large quantities of inert diluent, the steps of initiating the reaction by introducing into the reactor an isobutylene feed containing between one-fifth and one-half of the amount of isobutylene maintained in the feed during stable operation, feeding aluminum halide to the reactor until polymerization is initiated, as indicated by an abrupt rise in temperature, and then increasing the content of isobutylene in the feed to that predetermined for stable operation.

2,444,849
FLINT
Alfred F. Reilly, North Attleboro, Mass.
No Drawing. Application January 11, 1946, Serial No. 640,667
1 Claim. (Cl. 12—55)

A flint consisting of pyrophoric material set in a plastic binder.

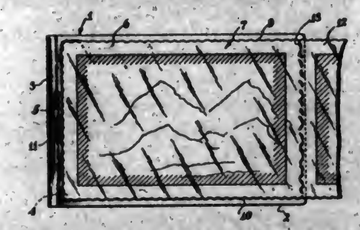
2,444,850
HEATING AND BRAZING TORCH
Malone L. Rogers, Portsmouth, Va.
Application October 28, 1946, Serial No. 706,133
3 Claims. (Cl. 158—27.4)

1. A heating and brazing tip comprising an outer tip member having a main bore and having a counterbefore at its inner end, and an inner tip member having a hollow cylindrical end portion fitted in said counterbore of the outer tip member and a reduced axial outer portion extending through the main bore to define a surrounding large capacity gas chamber about the inner part of said axial outer portion, said inner portion having holes through its outer end leading to said gas chamber, the outer part of said axial portion being enlarged and spaced from the outer tip member to provide an outer annular space between the same and the outer tip member leading from said chamber to the tip end of the torch tip for supplying gas to an outer annular flame, the enlarged outer part of said axial outer portion also having an inner annular space formed therein concentric with the first named annular space and being provided with holes affording communication between said chamber and the inner end of said inner annular space, said second annular space supplying gas for an inner annular heating flame surrounded by said outer annular flame.



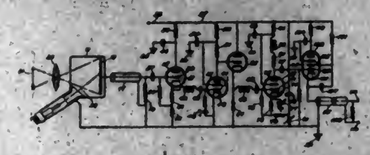
2,444,851
HEATING AND BRAZING TORCH
Malone L. Rogers, Portsmouth, Va.
Application October 29, 1946, Serial No. 706,492
2 Claims. (Cl. 158—27.4)

1. A heating and brazing tip comprising an outer tip member having a main bore intermediate its ends, a counterbore at its inner end, and a central axial opening through its tip end, an integral tubular extension on the tip end of said



outer tip member having a bore aligned with said central opening, said outer tip member further having a circular series of small holes therethrough parallel with and about said central opening, and an inner tip member having a hollow cylindrical inner portion fitted in said counterbore of the outer tip member and a reduced axial outer portion extending through the main bore to define a surrounding large capacity gas chamber, said outer portion having an axial bore aligned with said central opening, the bore of said outer portion and the central opening and the bore of said extension supplying gas to a central heating flame from said hollow inner portion of the inner tip member, said inner portion having holes through its outer end leading to said gas chamber, gas flowing from said gas chamber through said holes supplying a retricted amount of gas from said chamber about said heating flame and keeping the latter forwardly at the forward end of said extension.

2,444,852
GUN COUNTER-RECOIL ASSIST MECHANISM
Félix Frédéric Ruau, Deptford, London, England, assignor to Molins Machine Company, Limited, London, England
Application October 10, 1945, Serial No. 621,619
In Great Britain October 16, 1944
4 Claims. (Cl. 89—44)

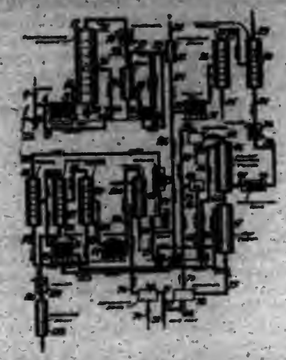


1. In a gun of the type in which the barrel and associated parts recoil during firing against the action of a resilient device which then causes them to counter-recoil to bring the gun to battery, a device for assisting the counter-recoil comprising an auxiliary spring, means actuated by the recoil of the gun to load said spring during recoil, and a cocking device to retain the spring in the loaded condition during the remainder of the recoil and part of the counter-recoil and to release the spring at a desired time to provide an additional force for effecting the counter-recoil.

2,444,853
STRIP PRINT ALBUM
Charles Scharf, Ridgefield, N. J.
Application August 26, 1946, Serial No. 693,136
2 Claims. (Cl. 281—5)

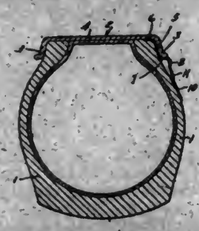
2. In an album of pictures printed on a strip, said strip having two sides deckle-edged, appropriately designated spaces between the pictures, perforations in said spaces for ease in accordion folding, said perforations conforming to a certain odd shaped design, so that when the pictures are separated each edge appears deckle-edged.

2,444,854
TELEVISION AMPLIFIER
Kurt Schlesinger, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 12, 1946, Serial No. 676,190
5 Claims. (Cl. 179—171)



2. In a television circuit, a constant current source of video signalling energy covering a relatively wide predetermined frequency band and across which source an inherent capacity exists, a load resistor connected to the said source and producing an attenuation of the higher range of the signalling frequency energy as compared to the lower frequency range of the said energy, a video signal amplifier tube having at least a cathode, an anode and a control electrode, means to impress the signal output from the said load resistor upon the control electrode of said tube, a degenerative resistor element connected to the cathode of said tube to provide controlled degeneration at the lower frequencies of the said video signal energy range, a by-pass condenser connected in parallel with the said cathode degenerative resistor to pass readily the higher frequencies of the said video signal frequency range, the time constant of the cathode resistor and cathode capacity being made equal to that of the input resistor and the input capacity of the signal source, and the value of the cathode resistor being such that the degeneration factor introduced thereby is equal to the voltage drop at the input due to the load resistor of the signal source at the cutoff frequency, a peaking element and a load resistor element serially connected in the anode circuit of said tube to provide peaking in the higher frequency range, and the ratio of the plate inductance to the plate resistance being equal to the ratio of the time constant of the cathode resistor and cathode capacity combination to the quantity one plus the product of the tube transconductance times the tube cathode resistor.

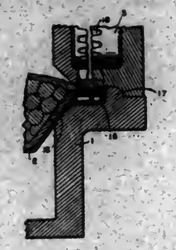
2,444,855
PRODUCTION OF AROMATICS BY THERMAL CRACKING
Robert M. Shepardson, Cranford, and Roy L. Mathiasen, Ferde, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 27, 1940, Serial No. 371,870
4 Claims. (Cl. 260—673.5)



1. A method of producing nitration grade toluene of over 99% purity from paraffinic petroleum gas oil hydrocarbons which comprises heating paraffinic petroleum gas oil hydrocarbons of about 500° to 700° F. boiling range in the presence of a large amount of steam to a temperature of about 1200 to 1400° F. for a period of about ½ to 15 seconds at a pressure of not more than 150 lbs./sq. in., fractionating the reaction products, recovering a fraction boiling within the

range of from about 200° F. to 250° F., condensing said fraction, cooling said condensed fraction in a refrigeration zone, treating said cooled fraction with liquid sulfur dioxide to form an extract,

washing said extract with isopentane, separating sulfur dioxide from said extract, treating said extract with acid to remove olefins, neutralizing the acid-treated extract and fractionating the extract to recover nitration grade toluene.

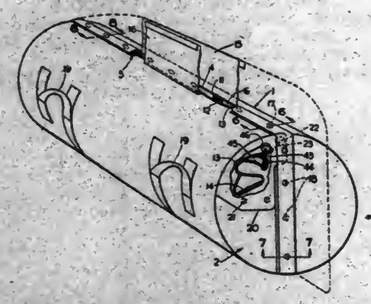


2,444,856
TIRE DEFLATION INDICATOR
Paul Siever, Minneapolis, Minn.
Application May 23, 1947, Serial No. 750,085
2 Claims. (Cl. 116—34)

1. A tire deflation indicator comprising, an anchoring member adapted to be interposed between the bead portion of a tire and the flange of a rim mounting said tire, said member having a laterally offset intermediate portion adjacent the radially outer surface of said flange and terminating in a generally radially outwardly disposed lip, a laterally extended slot in said offset portion adjacent said lip, and a sound producing tongue projecting radially outwardly through said slot with its outer end pressing against the side wall of the tire, said tongue being provided at its radially inner end with an angularly disposed foot adapted to engage the rim flange, and securing said tongue in said slot against accidental removal in a radially outward direction.

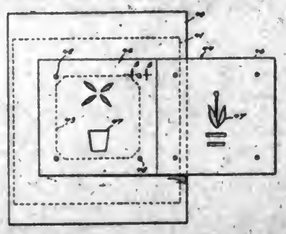
2,444,857
PIE CRIMPING DEVICE
Dennis W. Smith, Chicago, Ill., assignor to Colborne Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application May 4, 1946, Serial No. 667,344
10 Claims. (Cl. 197—49)

6. A piecrust crimping wheel comprising an inner disc and an outer disc mounted face to face and arranged to rotate together, the margins of the inner faces of said discs being formed to provide a connected series of openings in the periph-



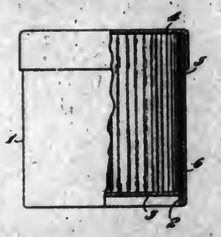
ery of said wheel between said discs, and means to adjust one of said discs relative to the other to vary the pattern of said openings.

2,444,858
ORGANOSILICON COMPOSITION AND METHOD OF PREPARING IT
John L. Speier, Pittsburgh, Pa., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application February 13, 1946, Serial No. 647,423
2 Claims. (Cl. 260—448.2)



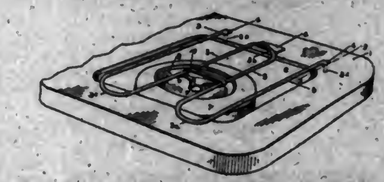
1. Trimethylsilylmethylpentamethyldisiloxane.

2,444,859
INFLATABLE CONTAINER AND PACK THEREFOR
Mark J. Sturtevant, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application January 17, 1946, Serial No. 641,817
15 Claims. (Cl. 9—2)



10. In combination, a pneumatic container embodying a plurality of cooperatively arranged inflatable compartments, a first means for inflating at least one of the compartments of the container, manual means for releasing said first inflating means, additional means for inflating the remaining compartments of the container, and means for automatically releasing the additional inflating means, the operation of said last-mentioned release means being initiated by the inflation of the first of said compartments.

2,444,860
STENCIL AND WORK HOLDER FOR MULTICOLOR PRINTINGS
Harry Summer, Brooklyn, N. Y.
Application March 20, 1946, Serial No. 655,847
1 Claim. (Cl. 101—115)

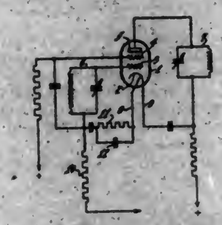


A multicolor stencil comprising a stencil member including a plurality of interconnected stencil elements and a support for the stencil member which holds the stencil elements in registration relative to the work during the color application, each of the stencil elements having openings therein corresponding to portions of the multicolor design to be reproduced, the support comprising front and back cover members which are hinged together and which are arranged to receive the work to be ornamented therebetween, the front cover member having an opening therein to permit the stencil elements to contact the work, and means for successively mounting the stencil elements in registration on the support to permit application of the color to the work, such means comprising a plurality of securing elements mounted in spaced relation on the front cover member, and means on each stencil element cooperating with such securing elements to hold the stencil element on such front cover member in registration with the work, the front and back cover members being also arranged to be opened to lie in a common plane so as to overlay a piece of work to be ornamented of larger dimensions than either cover member.

2,444,861
FROZEN-FOOD CONTAINER
Carleton R. Symmes, Saugus, Mass., assignor to H. P. Hood & Sons, Inc., Charlestown, Mass., a corporation of Massachusetts
Application November 9, 1945, Serial No. 627,590
3 Claims. (Cl. 229—14)

1. A frozen-food container comprising a cylindrical casing having one end margin only turned inwardly to form a ledge, a stiff bottom supported by the ledge throughout substantially the entire circumference thereof and being movable upwardly through the container in response to upward pressure on its under side, and a cylindrical liner resting on the bottom and slidable endwise in the container, the liner having sufficient longitudinal rigidity to be pushed upwardly by said bottom without collapsing, whereby the contents of the container may be ejected from the upper end of the container while still wrapped in the liner by upward pressure on the bottom, the liner being split endwise of the casing throughout its extent so that it may be peeled from the frozen contents after being ejected and having a tab on each edge of the split to facilitate peeling, each tab being confined to a portion of the length of the liner and the two tabs being offset relatively to each other lengthwise of the split, whereby the tabs may extend across the split into overlapping relationship with the margin of the liner on the other side of the split without interfering with each other.

2,444,862
GRID FOR FLUID FUEL STOVES
Edwin J. Thomes, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 23, 1944, Serial No. 564,766
5 Claims. (Cl. 126—214)

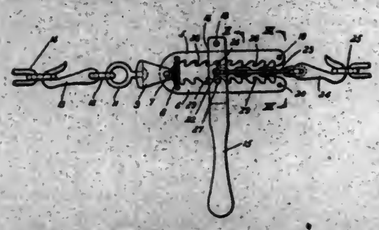


5. In a fluid fuel stove, a cooking top, a burner below said top, said top having a cooking opening above and aligned with the burner, a grid composed of metal of relatively great length and small diameter shaped to form a plurality of bars extending across said opening and having their outer portions resting upon and supported by said top between its edges and said opening and above said opening, the extremities of said metal being turned downwardly so as to be disposed substantially normal to the plane of the top, said top having small openings thereon at one side of said cooking opening through which said downwardly turned extremities are passed downwardly a distance sufficient to form a hinge and to removably connect the grid with the top and enough whereby the same acts as a means to limit backward movement of the grid when raised, said small openings being normally spaced a slightly different distance than the distance between said downwardly turned extremities, so that there is frictional engagement between said extremities and the edges of said small openings.

2,444,863
METHOD FOR MECHANICALLY SIMULATING GENUINE OIL PAINTINGS
Isidor Tornberg, Plainfield, N. J., assignor to Dadson Enterprises, Inc., New York, N. Y., a corporation of New Jersey
No Drawing. Application June 28, 1945, Serial No. 602,151
4 Claims. (Cl. 117—12)

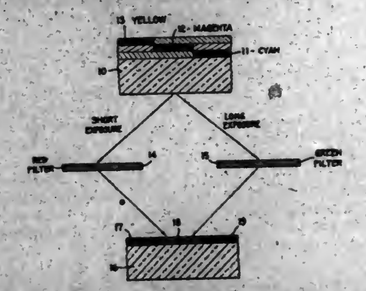
1. The method of enhancing the appearance of previously printed matter, comprising surprinting a substantially transparent adhesive in liquid form upon the previously printed design over certain portions only thereof, applying a fusible, resinous powder to the adhesive, removing excess powder, and solidifying the adhesive and powder, whereby such portions will be formed with raised transparent surfaces.

2,444,864
HIGH-FREQUENCY TUNED AMPLIFYING CIRCUIT
Aldert van der Ziel and Maximiliaan Julius Otto Strutt, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application March 23, 1943, Serial No. 480,199
In the Netherlands December 30, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires December 30, 1960
3 Claims. (Cl. 179—171)



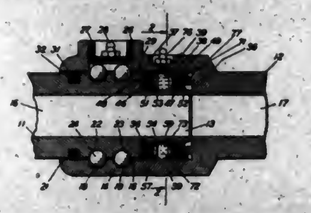
1. In a high frequency transmission system having a multi-electrode electron discharge device whose electrodes include a cathode, a first grid, a second grid and an anode in the order named, and which has associated therewith a circuit for varying the bias voltage on said first grid, means for supplying a positive direct current potential to said second grid, a parallel tuned input circuit and a parallel tuned output circuit, a pair of supply leads for said cathode, a connection from said first grid to one terminal of said input circuit, a connection from one of said cathode supply leads to the other terminal of said input circuit, said last connection including a resistor in series therewith which is unbypassed for high frequencies, a connection from said anode to one terminal of said output circuit, and a connection from the other cathode supply lead to the other terminal of said output circuit.

2,444,865
SPRING HEEL ADAPTER
John P. Warrington, Bellflower, Calif.
Application July 3, 1947, Serial No. 759,632
1 Claim. (Cl. 36—38)



A spring heel adapter including two spaced plates, coil springs between the plates, means associated with the upper plate to secure the adapter to a shoe, means associated with the lower plate to secure thereto a rubber heel, a series of tangs on the upper plate and extending upwardly therefrom to embrace the shoe heel portion, and a series of tangs on the lower plate and extending downwardly therefrom to embrace the rubber heel.

2,444,866
CHAIN JACK AND TIGHTENER
John H. Weed, West Sunbury, Pa., assignor of one-half to Samuel Patten, Butler, Pa.
Application August 13, 1946, Serial No. 690,236
2 Claims. (Cl. 254—72)



1. A jack device comprising a pair of laterally-spaced bars pivotally connected together by a pin at one end of the device and having rows of teeth along their opposed edges, a spring yieldably urging the free ends of the bars toward each other, a block carried by said pin and having means thereon for connecting the pivoted ends of the bars to an element to be pulled, a forked lever partly embracing the bars and extending transversely thereof entirely across them and with the forked extremities closed, a pin carried by the forks of the lever at a point between the said bars, for connection thereto of a second element to be pulled, and other pins carried by the lever forks at opposite sides of the second-named pin, each in position to engage the teeth of the adjacent bar, whereby the said other pins may serve as pawls, the teeth being of hooked form and pointed toward the said pivoted end.

2,444,867
PHOTOGRAPHIC MASKING USING THE CLAYDEN EFFECT
John A. C. Yule, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application July 26, 1945, Serial No. 607,211
7 Claims. (Cl. 95—2)

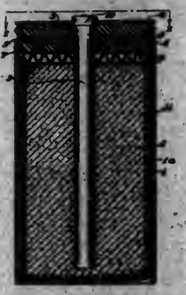
1. The method of photographic masking, which comprises exposing a silver halide emulsion layer to an image of a subject for a period not exceeding 0.001 second, with a high intensity light beam producing an exposure of from 4 to 1000 times the Clayden threshold value of the emulsion, and thereby desensitizing the exposed portions of the layer, then exposing said layer to a second image of the same subject with a low intensity light source having no desensitizing action, for a longer time than 0.001 second to produce a developable image, and developing the emulsion with a silver halide developing agent.

2,444,868
FLEXIBLE PIPE COUPLING WITH FLUID-SUPPORTED PACKING
Frank M. Allen, Azusa, and Clyde B. Taylor, Long Beach, Calif., assignors to The All-Flex Corporation, Los Angeles, Calif., a corporation of California
Application January 9, 1942, Serial No. 426,208
1 Claim. (Cl. 285—97.3)

A swivel pipe coupling comprising a pair of intercommunicating pipe elements mechanically interconnected for rotary movement with respect to each other and having an annular recess therebetween, a plurality of annular packers spaced apart within said recess, and fluid between each two adjacent packers, said packers establishing fluid-tight seal with both circumferential walls of said recess whereby said fluid operates to restrain said packers from lateral movement within said recess, at least one of said packers being immobilized against axial movement by equilibrated fluid pressures on opposite sides thereof.

2,444,869
MANUFACTURE OF SPONGE RUBBER
William J. Clayton, Mishawaka, and Paul V. Butsch, South Bend, Ind., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application April 27, 1945, Serial No. 590,735
12 Claims. (Cl. 260—86.5)

1. The method of making sponge synthetic rubber which comprises preparing a fluid foam of a synthetic rubber latex comprising an aqueous emulsion polymerizate of material selected from the group consisting of butadienes-1,3 and mixtures of butadienes-1,3 with other polymerizable compounds containing a $CH_2=<C$ group and capable of forming copoplymers with butadienes-1,3 and containing 1 to 5 parts of zinc oxide, 0.1 to 2 parts of an alkali salt having a complex ironcyanide anion, 0.25 to 3 parts of an alkylated phenyl monoether of polyethylene glycol, and 0.5 to 2.5 parts of a slightly soluble salt of fluosilicic acid per 100 parts of synthetic rubber, shaping the foam before gelling takes place, permitting the foam to gel and vulcanizing to form sponge synthetic rubber.



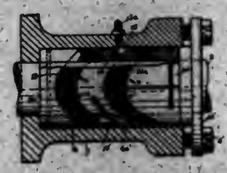
2,444,870
COPOLYMERS OF BUTADIENES-1,3 AND ALPHA ARYL ACRYLONITRILES
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application May 31, 1943, Serial No. 489,193
6 Claims. (Cl. 260—84.5)

1. A copolymer of a mixture of an alpha aromatic acrylonitrile and a conjugated hydrocarbon butadiene, in which monomer mixture each monmer constitutes at least 20% by weight of the total monomers.

2,444,871
CHEWING GUM BASE AND METHOD
Wallace P. Cohoe, New York, N. Y., assignor to American Chicle Company, Long Island City, N. Y., a corporation of New Jersey
No Drawing. Application June 23, 1944, Serial No. 541,839
8 Claims. (Cl. 99—135)

1. A chewing gum base incorporating a thermosetting resin of the group of urea formaldehydes and ketone aldehydes in a final state of polymerization and in such proportion as to form a friable structure.

2,444,872
SEALED DRY CELL WITH THREADED END
Cyril P. Deibel, deceased, late of Lakewood, Ohio, by Marion T. Deibel, Lakewood, and The Cleveland Trust Company, Cleveland, Ohio, co-executors, assignors to General Dry Batteries, Inc., a corporation of Ohio
Application March 14, 1945, Serial No. 582,600
5 Claims. (Cl. 136—133)

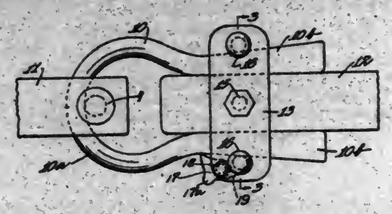


3. A dry cell comprising a zinc container containing a mass of depolarizing mix and a carbon electrode, an externally threaded metal ferrule secured to the upper end of said zinc container and projecting thereabove, and a mass of sealing material in sealing engagement with the upper end of said container, said metal ferrule being exteriorly threaded and having inwardly projecting portions thereon embraced by said mass of sealing material.

2,444,873
SECURING DEVICE
Aaron S. Goldberg, Philadelphia, Pa., assignor to Bunting Glider Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 27, 1947, Serial No. 737,636
1 Claim. (Cl. 155—187)

A furniture structure comprising an open frame of tubular metal having a series of longitudinally spaced openings formed therein, each opening on one side of said frame being paired with an opening on the opposite side of said frame, a plurality of straps extending between opposite sides of the frame, and means for anchoring the opposite ends of each strap to the frame, said means including a channel-shaped clip clamped to the terminal end of each strap, the opposite side walls of each of said clips extending across the full width of the strap and being respectively crimped complementally to each other to securely lock the strap between the walls when the same are clamped together, said clips being each additionally provided with a hook-like element having a terminal end spaced laterally from a wall of the clip and engageable in an opening formed in the metal tubing of the frame aforesaid, the crimp in the clip wall immediately adjacent said hook-like element being in the form of a groove extending the full width of the clip, said groove being adapted to receive therein the external cylindrical surface of the metal tubing aforesaid whereby to maintain the clip securely in position with its axis paralleling that of the metal tubing.

2,444,874
PACKING
Edward Hansen, Cleveland, Ohio, assignor of one-tenth to George B. Pitts, Cleveland Heights, Ohio
Application October 9, 1944, Serial No. 557,921
4 Claims. (Cl. 286—8)



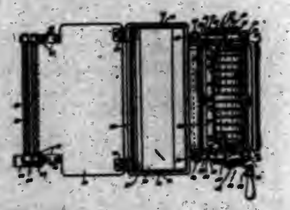
1. In a packing, the combination with a housing having a boss and a driven shaft extending through the boss, of a packing mounted in said boss in surrounding relation to said shaft, said packing comprising a plurality of substantially rigid annular members having opposed end walls diametrical portions of which overlap the shaft longitudinally thereof in opposite directions, and deformable packing material interposed between said members, the overlapping diametrical portions of each member being in alinement, longitudinally of said shaft, with the intermediate diametrical portions of the adjacent member, means for supplying lubricant to said shaft, and means for applying pressure axially of said shaft to the outer annular member for deforming said packing material and forcing the latter into sealing engagement with the walls of the boss and said shaft, whereby the arrangement of the packing material in conjunction with the rotation of the shaft provides a wiping action for distributing the lubricant over the surfaces of the latter.

2,444,875
FOOD PRESERVING
Elsie A. Hayes, South Euclid, Ohio
No Drawing. Application June 26, 1946, Serial No. 679,557
8 Claims. (Cl. 99—156)

1. A preserved food comprising the fruit of a member of the capsicum family cold packed in a solution containing vinegar and saccharine as a preserving and hardening agent.

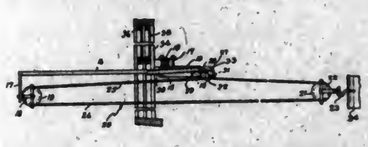
2,444,876
HITCH OR CLEVIS
Gerald L. Kuhl, Chester, Minn.
Application April 30, 1947, Serial No. 745,069
10 Claims. (Cl. 280—33.44)

1. A hitch or clevis having in combination, a member having a portion at one end adapted to be connected to a vehicle to be drawn, said member having spaced arms at its other end, a draw-bar of a tractor disposed between said arms, and means for moving said arms into tight engagement with said draw-bar when said bar is pulled upon.



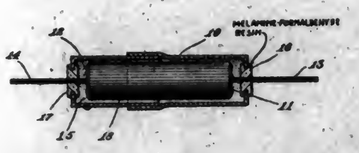
2,444,877
STENCIL PUNCH
Walton C. Marsh and Herbert W. Hempel, Belleville, Ill., assignors to Marsh Stencil Machine Company, Belleville, Ill., a corporation of Illinois
Application October 3, 1944, Serial No. 557,016
3 Claims. (Cl. 164—124)

1. As an article of manufacture, a unitary character punch comprising a character segment and a backing plate from which said segment projects, said segment being configurated to possess shear simultaneously at the time said segment and said backing plate are formed in a unitary structure.



2,444,878
GUMMING MACHINE
Walton C. Marsh, Belleville, Ill., assignor to Marsh Stencil Machine Company, Belleville, Ill., a corporation of Illinois
Application October 30, 1944, Serial No. 561,095
24 Claims. (Cl. 91—51)

24. In a mechanism of the kind described, a main support having an adhesive receptacle and a washing chamber, feed means for applying adhesive from the adhesive chamber to a label or the like, and means supporting the feed means for movement from an operating position relative to the adhesive receptacle to a washing position in the washing chamber, said washing



chamber being of sufficient capacity to receive the feed means in immersed relation therein, said feed means being movable into fully immersed position in said washing chamber.

2,444,879
CLOTHESLINE SUPPORT
Norman L. Petersen, Nichols, Conn.
Application May 1, 1946, Serial No. 666,207
7 Claims. (Cl. 211—119.05)

1. A clothesline support of the character described comprising a support adapted to be mounted outside a window opening, a housing mounted on said support including guide means, a supporting bar mounted in said guide means and slidable therein between a position outside said opening and a position extending through the opening, a pulley mounted adjacent each end of the bar, another pulley adapted to be mounted on an outside support spaced from the first pulleys, a line running over the pulley at the inner end of the bar and the pulley on the outside support, a lever pivoted on the housing, a stop means on the lever adapted to engage the pulley at the outer end of the bar when the bar is in its position through the opening to hold it in this position, and a guide on the lever positioned adjacent said latter pulley and under the upper run of the line when the bar is in the opening and adapted when the lever is swung to release the bar to lift the upper run of the line about the adjacent pulley and retain it above this pulley to permit sliding of the bar and the pulleys thereon to a position outside the opening.

2,444,880
ELECTRICAL SEAL
Preston Robinson, Williamstown, and Paul H. Netherwood, North Adams, Mass., assignors to Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts
Application December 23, 1943, Serial No. 515,382
4 Claims. (Cl. 174—18)

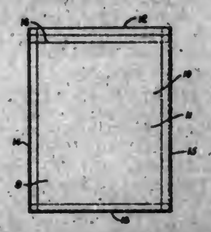
3. An electrical condenser comprising rolled electrodes insulated from each other and connected to separate terminals, said condenser being enclosed in a metallic housing, said housing being insulated from the terminals of said condenser by a molded melamine-formaldehyde resin which has been shrunk on and about said metals and substantially entirely polymerized by the heat treatment to which it was subjected during the molding and sealing operation.

2,444,881
PRESERVATION OF 1,3-DIENE COPOLYMERS WITH MONO-SUBSTITUTED THIOUREAS
Robert R. Sterrett, Totowa, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 1, 1944, Serial No. 566,240
8 Claims. (Cl. 260—84.5)

4. An elastomeric polymerization product of 1,3-butadiene with a compound of the structure

$$CH_2=\overset{X}{\underset{|}{C}}-Y$$

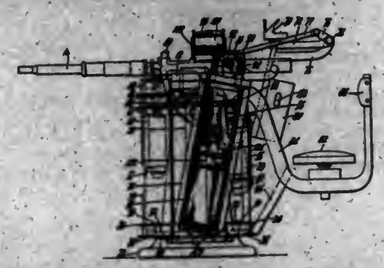
where X is a radical selected from the class consisting of hydrogen and methyl; and Y is a radical selected from the class consisting of CN, phenyl and methyl, in admixture with a compound having the general formula



$$R-\overset{H}{\underset{|}{N}}-\overset{S}{\overset{\|}{C}}-NH_2$$

in which R is an organic radical selected from the group consisting of alkyl, aryl, aralkyl, alkenyl, cycloalkyl, and monovalent heterocyclic radicals, said latter compound being in a small but sufficient amount to preserve the said elastomeric copolymer.

2,444,882
ALPHA BETA DIMETHYLENE SUCCINONITRILE
Pliny O. Tawney, Passaic, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 13, 1947, Serial No. 754,601
3 Claims. (Cl. 260—465.8)

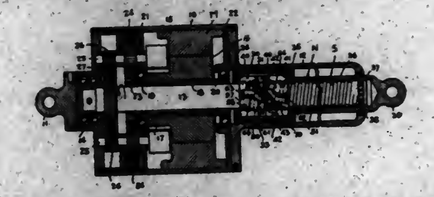


1. α,β-Dimethylenesuccinonitrile.

2,444,883
CURTAIN AND METHOD OF MAKING SAME
Richard S. Temko and Abraham Katz, New York, N. Y., assignors to Home Curtain Corp., Far Rockaway, N. Y., a corporation of New York
Original application March 14, 1944, Serial No. 526,418. Divided and this application April 23, 1946, Serial No. 664,280
2 Claims. (Cl. 2—243)

1. Curtain construction comprising: a curtain base fabric, having a fabric edge; said base fabric being folded inwardly upon itself to form a first fold having a first bight, being folded again to form a second fold having a second bight, being folded again to form a third fold having a third bight; said first and third bights being located next to each other at the outer edge of the curtain to form the curtain edge, said second bight being located inwardly of the curtain edge and positioned oppositely to said first and third bights; said base fabric edge being folded upon itself to form a fourth fold having a fourth bight; and a set of stitches penetrating said first and third folds and securing the same in position.

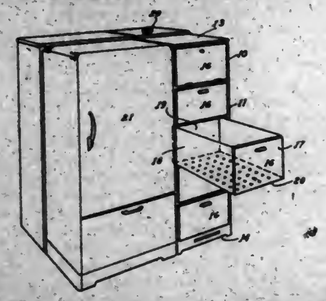
2,444,884
GUN BATTERY WITH AMMUNITION FEED MEANS
John C. Trotter, Williamsville, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application November 26, 1942, Serial No. 467,017
5 Claims. (Cl. 89—33)



1. A gun battery comprising, in combination, a frame, a gun having a vertically arranged ammunition feedway, gun mounting means carried by said frame, horizontally arranged pivot means for said gun carried by said mounting means, said pivot means being mounted rearwardly of said ammunition feedway when said gun is in its substantially horizontal axial position, said pivot means permitting adjustments of said gun in a substantially vertical plane from a substantially horizontal axial position to a substantially vertical axial position, an ammunition belt for said gun, an ammunition belt guide roll fixedly mounted upon said gun in parallel alignment with said feedway, an ammunition belt magazine mounted upon said frame and having its vertical axis inclined backwardly at an angle which substantially bisects the angle between the lines of travel of said belt when the gun is in its extreme positions of adjustment, whereby to reduce the amount of twist in the belt to a minimum when moving the gun to such extreme positions, and said magazine having an ammunition outlet opening in the upper end thereof, said opening being positioned rearwardly of said ammunition feedway when said gun is in its substantially horizontal position.

2,444,885
PROCESS FOR PRODUCING KETOGULONIC ACID AND ITS ESTERS
Pancras J. van der Laan, Utrecht, Netherlands, assignor to Nederlandsche Organisatie voor toegepastnatuurwetenschappelijk onderzoek ten behoeve van de Voeding, The Hague, Netherlands
No Drawing. Application March 22, 1946, Serial No. 656,505. In the Netherlands July 27, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 27, 1962
6 Claims. (Cl. 260—528)

1. In the process of producing ketogulonic acid by oxidation of sorbose with nitric acid, the steps of first decomposing by treatment with hydrogen sulfide the nitric acid compounds formed in the oxidation product during oxidation; and thereafter precipitating by treatment with lead acetate organic impurities contained in the thus treated oxidation product and which hinder crystallization of said ketogulonic acid.

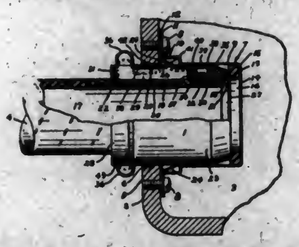


2. In the process of producing ketogulonic acid by oxidation of sorbose with nitric acid, the steps of first precipitating by treatment with lead acetate organic impurities contained in the oxidation product and which hinder crystallization of said ketogulonic acid; and then decomposing the nitric acid compounds formed in the oxidation product during oxidation by treatment with hydrogen sulfide.

2,444,886
SCREW AND NUT ACTUATING MECHANISM
Theodore W. Vickers, Los Angeles, Calif.
Application April 9, 1945, Serial No. 587,246
12 Claims. (Cl. 74—459)

1. In mechanism of the class described, two elements having co-acting helically related grooves; balls in said grooves operatively connecting said elements for relative movement, one by the other; means co-acting with said grooves to provide a continuous circulatory path along which the balls are forced to roll in one direction or the other according as said relative movement of the elements is effected in one direction in opposition to the load, or in the other direction by the load; means co-acting with the balls to prevent circulation thereof in that direction caused by the load, whereby sliding friction of the balls between said elements will be utilized to support the load; and means co-acting with the balls to free them for rolling movement when load-moving force is applied to the elements, so that the rolling friction of the balls between the elements will be present when moving the load.

2,444,887
SUPPLEMENTAL FOOD-STORAGE CABINET FOR USE IN CONJUNCTION WITH REFRIGERATORS
Ralph S. Wyeth, Newark, Ohio
Application February 17, 1945, Serial No. 578,481
3 Claims. (Cl. 62—89)



1. A supplemental food-storage cabinet for use in conjunction with a household refrigerator comprising vertical side and rear walls and hori-

zontal top and bottom walls, a plurality of horizontally movable food-receiving drawers slidably mounted in connection with said walls, the bottom of said drawers being formed with perforations provided for the passage therethrough of air circulating within said cabinet, said drawers being provided with unperforated front walls forming the front of said cabinet when the drawers are closed, an inlet for the admission of relative cool air provided in the said cabinet adjacent to the bottom thereof, an outlet for the discharge of air leading from the upper portion of said cabinet, and a second air inlet provided in the lower part of said cabinet and attached for communication with the interior of the associated refrigerator.

2,444,888
COUPLING

Earl J. Baumgardner, Marion, Iowa, assignor to H. A. Douglas Mfg. Co., Bronson, Mich., a corporation of Michigan

Application December 12, 1944, Serial No. 567,813
17 Claims. (Cl. 285—173)

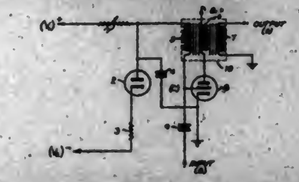
1. In a device of the kind described, a conduit, a tube having one extremity anchored in said conduit and its other extremity extending free beyond the end of said conduit, a stop provided adjacent the free end of said tube, a body rotatably mounted on said tube, said body being provided with a recess at one extremity receiving the end of the conduit and a recess at its other extremity receiving the stop of the tube whereby to hold said body against axial movement with respect to said tube, a ferrule surrounding said body in a manner whereby the space between said tube and said ferrule is substantially taken up by said body, said body being provided with an exposed handle portion and a channel one end of which terminates adjacent said handle portion, an aperture provided in said ferrule, latch means disposed in said channel having a catch projecting through said aperture and a finger portion projecting outwardly through said handle portion for depressing said catch, and resilient means acting on said latch means for normally urging said catch portion outwardly from said channel.

2,444,889
SAFETY GAS COCK

Robert B. Braidwood, Dallas, Tex., assignor of one-half to Bruce N. Spencer, Jr., Dallas, Tex.

Application June 14, 1946, Serial No. 676,693
2 Claims. (Cl. 284—13)

1. A safety gas cock including, a body having a flow passage therethrough and a nozzle having a main bore and a reduced counterbore at its outer end, said nozzle having a valve seat between its bores, a ring bushing at the inner end of the main nozzle bore, a valve ball movable in the main bore of the nozzle engaging the seat, a coiled spring confined between the bushing and the ball, and an angular lever having one arm extending into the nozzle counterbore and pivoted



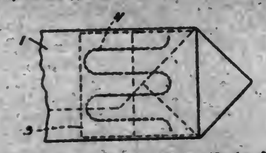
adjacent the ball and its other arm exterior of the nozzle and extending laterally beyond the end of the nozzle.

2,444,890
SELF-SYNCHRONOUS FREQUENCY DIVIDER

George Hite, Dorchester, and Glenn E. Whitham, Wollaston, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy

Application December 4, 1943, Serial No. 512,930
4 Claims. (Cl. 250—36)

3. In self-synchronous electronic apparatus for dividing the frequency of a repeated voltage wave form, a blocking oscillator including an electron tube having at least an anode, a control grid and a cathode, means for applying said repeated wave form to said control grid, means for applying a bias voltage to said control grid, said biasing means comprising a potential dividing circuit including a first resistor, a rectifying means and a second resistor connected in series between the positive and negative terminals of a potential source, said control grid being connected through an inductance to the junction of said first resistor and said rectifying means, and thence through a condenser to the cathode of said electron tube, said bias voltage being of such magnitude as to cause said electron tube to conduct with the first cycle of a series of cycles of said wave form, said first resistor and said condenser functioning as a time constant circuit to prevent said electron tube from conducting during a predetermined time interval following a conduction period, an anode inductance mutually coupled to said grid inductance, and an output circuit coupled to said anode inductance, whereby a synchronous frequency division in the form of a second repeating wave form of sub-multiple frequency of said first-mentioned repeating wave form is obtained.



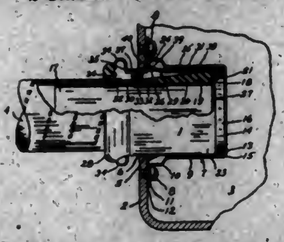
2,444,891
BAG

John Johnsson, Saffle, Sweden, assignor to Billeruds Aktiebolag, Saffle, Sweden, a corporation of Sweden

Application March 20, 1946, Serial No. 655,656
In Sweden April 28, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 28, 1961
1 Claim. (Cl. 229—62.5)

In a bag structure of the type comprising a multi-ply paper bag sealed at both ends, a filling

valve in one corner of said bag formed by folding in a portion of said corner, a filling tube attached to said filling valve, the said tube extending beyond said filling valve into said bag, a stiffening insert attached to the top wall of said filling tube, said stiffening insert comprising a

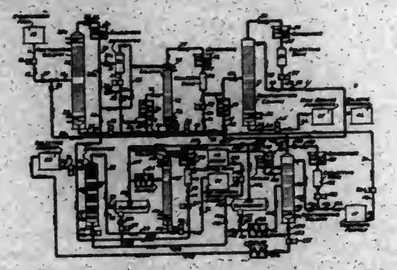


length of wire bent back and forth to form stems interconnected by bends, the said insert being positioned in said tube to place said stem portions substantially in the longitudinal direction of said tube, whereby upon filling said bag through said tube the said tube may be bent to seal the said valve and hold said valve in sealed position.

2,444,892
COUPLING

George M. Kelly, Sturgis, Mich., assignor to H. A. Douglas Mfg. Co., Bronson, Mich., a corporation of Michigan

Application July 9, 1945, Serial No. 603,779
2 Claims. (Cl. 285—174)



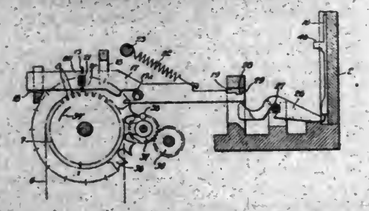
1. A plug device comprising, a body member, a pocket provided in said body, an apertured ferrule surrounding at least a portion of said body and covering a part of said pocket, an axial opening in said body, a tubular member extending through said axial opening, a hole in the bottom wall of said pocket intersecting said axial opening, said pocket, said tubular member and said ferrule forming a chamber, latch means in said chamber having a catch portion projecting through the aperture in the ferrule and a finger operated portion projecting outwardly from the uncovered part of the pocket, and resilient means disposed in the hole engaging the tubular member and acting on said latch means for urging its projecting portions to predetermined positions.

2,444,893
RECOVERY OF METHYL ETHYL KETONE FROM AZEOTROPIC DISTILLATES BY EXTRACTION WITH TETRAETHYLENE GLYCOL

George B. Lake, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

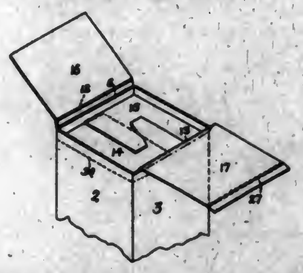
Application October 18, 1941, Serial No. 415,567
2 Claims. (Cl. 202—42)

1. In a process for the treatment of a hydrocarbon fraction containing toluene and non-aromatic hydrocarbons to separate toluene from the non-aromatic hydrocarbons contained therein which ordinarily distill from said hydrocarbon fraction in the same temperature range as toluene distills therefrom which comprises azeotropically distilling said hydrocarbon fraction in the presence of a sufficient amount of methyl ethyl ketone to vaporize the non-aromatic hydrocarbons together with the methyl ethyl ketone thereby leaving toluene in the residue substantially completely separated from the hydrocarbons other



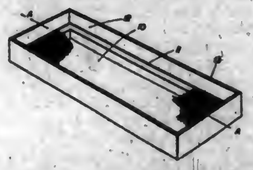
than toluene, the steps of extracting by solution of the methyl ethyl ketone in said vaporized mixture in an extraction zone in countercurrent with an amount of tetra ethylene glycol sufficient to dissolve said methyl ethyl ketone and separating a solution of said tetra ethylene glycol and methyl ethyl ketone from said non-aromatic hydrocarbons.

2,444,894
MULTIPLE SELECTION PATTERN MECHANISM



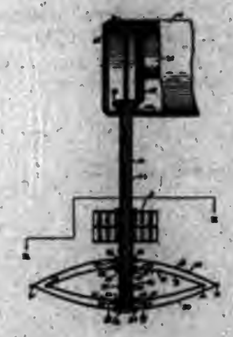
Charles F. Miller, Philadelphia, Pa., assignor to Jacquard Knitting Machine Co., Inc., Philadelphia, Pa., a corporation of New York

Application September 27, 1945, Serial No. 618,897
10 Claims. (Cl. 66—50)



6. In a pattern mechanism controllable by a pattern, a feeler and an associated call-transmitting coupler, a coupler actuator to actuate said coupler to transmit pattern calls onward from the coupler, said actuator and coupler being so related that the actuator actuates the coupler differently when the coupler occupies different positions in its path, and pattern-advancing means to advance the pattern to bring successive pattern-calling agencies of the pattern to said feeler successively, said feeler having a rest position through which the pattern passes in engagement with the feeler as the pattern is advanced to advance its pattern-calling agencies, and being movable with the pattern advancing through the rest position when encountered by at least some of the pattern-calling agencies to cause its associated coupler to move within the path of the coupler actuator, and said coupler actuator being actable on said coupler only once for each period in which said pattern advancing means advances through said rest position a sufficient portion of the pattern to contain at least two pattern-calling agencies for said feeler.

2,444,895
SEALED BOX
William A. Ringler, Wayne, Pa., assignor to The Gardner-Richardson Company, Middletown, Ohio, a corporation of Ohio
Application June 2, 1944, Serial No. 538,429
10 Claims. (Cl. 229—39)

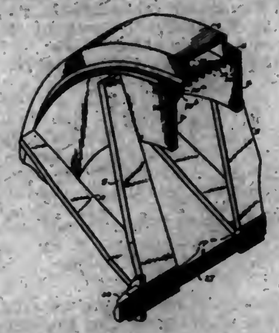


1. A knock-down one-piece carton capable of being sealed at an end by a cast body of initially liquid sealing substance, said carton comprising four enclosing body walls in articulation and a glue flap articulated to one of said body walls, said glue flap being adhesively secured to the body wall at the opposite side of the blank from said glue flap to form a tubular body open at both ends, and integral closure flaps at an end of each of said body walls, said closure flaps being articulated to the ends of the respective body walls by spacing portions adapted to parallel the respective body walls within the tubular portion when the flaps are in closure position, whereby to inset the flaps from the ends of the body walls, two at least of said closure flaps being shaped and dimensioned to extend entirely across the transverse section of said tubular body and to require to be forced into position to engage the inturned spacing portions tightly, said spacing portions being rectangular in shape and of full length, so that by the combined action of the said flaps and the abutment of the ends of the spacing portions against each other an inset closure of tray-like shape may be formed from said closure flaps and spacing portions, said closure being characterized by a fold at the end of said body walls and capable of holding a setable liquid sealing substance poured therein to form a cast seal, covering said flaps and sealing by capillarity the meeting lines at the ends of said spacing portions.

2,444,896
METHOD OF PRODUCING A CATALYST OF FIBROUS ASBESTOS
Louis Lionel Shrein, London, England, assignor to Baker & Company, Incorporated, Newark, N. J.
Application April 21, 1943, Serial No. 483,975
In Great Britain April 21, 1942
4 Claims. (Cl. 92—55)

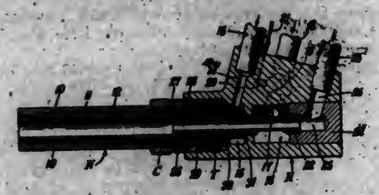
1. The method of producing a catalyst of fibrous asbestos impregnated with metal of the platinum group formed as a coherent pad of self-sustaining shape, comprising impregnating fibrous asbestos with metal of the platinum group, forming a sludge of the impregnated asbestos with water, depositing the sludge on a screen constituting the bottom of a trough, forming the sludge into a suspension by the admission of water into the trough, removing surplus water from said suspension by drainage through said screen and allowing the suspended impregnated asbestos fibers to settle to form a homogeneous layer and drying said layer to produce a coherent pad of self-sustaining shape pervious to the free flow of the medium to be catalyzed.

2,444,897
CREAM WHIPPER
Eugene C. Brull, Forest Park, Ill.; Eugene E. Brull administrator of said Eugene C. Brull, deceased
Application November 3, 1945, Serial No. 626,541
1 Claim. (Cl. 259—132)



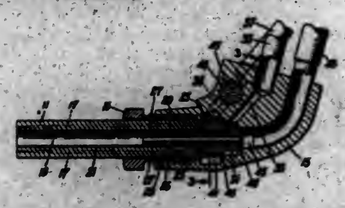
A cream whipper including a drive shaft, means for rotating it, a dasher secured to an end of said shaft, said dasher comprising two rectangular thin flat sheets of bendable material permanently fastened together at their ends and arranged with their central portions immovably secured to said shaft in separated relation axially of said shaft and defining an ellipse in side elevation; said dasher being attached to said shaft with its major axis at right angles to the length of the shaft; the immovable connection of said sheets to said shaft preventing any deformation of the sheets as the dasher is rotated with the shaft.

2,444,898
TIRE RECAPPING MACHINE
Melvin Dwight Butterfield, Wichita, Kans.
Application April 27, 1945, Serial No. 590,659
2 Claims. (Cl. 18—18)



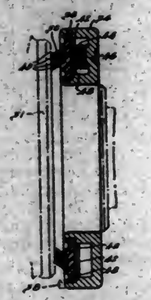
3. A tire capping machine comprising a supporting frame, semi-circular mold sections supported from said frame and being disposed in a vertical plane, said lower section being canted forwardly for the ready insertion and removal of a tire casing therefrom, means providing both a hinge and a swivel connection between the sections, whereby the upper section may be moved vertically and swung laterally relatively to the lower section, said mold sections having tread-confining side flanges terminating in outwardly offset, inner knife edges and full-circular bead

locking flanges supported from said frame for swinging movement on a vertical axis and being



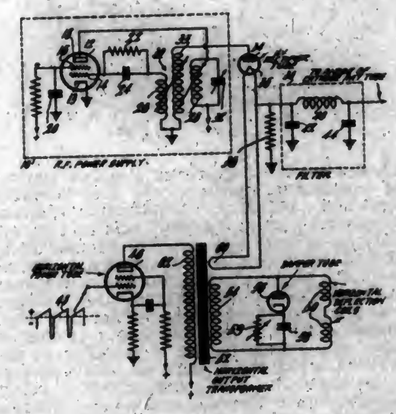
adapted for movement into line contact with the offset knife edges of the mold-section side flanges.

2,444,899
BLOWPIPE APPARATUS FOR THERMO-CHEMICALLY REMOVING METAL
Edward Meincke, Scotch Plains, and Joseph M. Eisman, Maplewood, N. J., assignors to The Linde Air Products Company, a corporation of Ohio
Application April 21, 1943, Serial No. 483,873
5 Claims. (Cl. 110—22)



1. Blowpipe apparatus comprising a nozzle having a front end surface, an oxygen passage having a discharge orifice in said front end surface for discharging a jet of oxygen laden with adjuvant powder, and preheat passage means having outlet means adjacent to but spaced from said discharge orifice for discharging combustible fluid; said apparatus also comprising a tube extending forwardly into said oxygen passage and having a front end located within said passage at a position spaced rearwardly from said discharge orifice, at least a forward portion of said tube being spaced from the wall of said oxygen passage to provide an annular conduit around said tube, said tube being adapted to discharge a stream of oxygen centrally into said oxygen passage, partition means dividing a portion of said annular conduit into a plurality of small longitudinally extending ducts spaced from one another circumferentially adjacent the discharge end of said tube, said partition means being carried by said tube and being arranged closely adjacent said wall, oxygen and combustible fluid supply conduits in communication with said tube and said passage means, respectively, and an adjuvant powder supply conduit in communication with said annular conduit in back of said partition means, said small ducts acting to distribute adjuvant powder uniformly into said oxygen stream in a plurality of small streams, and to minimize flashbacks into said annular conduit.

2,444,900
BLOWPIPE APPARATUS
Edward Meincke, Scotch Plains, and Hugh T. Smith, East Orange, N. J., assignors to The Linde Air Products Company, a corporation of Ohio
Application April 21, 1943, Serial No. 483,874
19 Claims. (Cl. 110—22)



10. A blowpipe comprising a nozzle having a first longitudinal passage for metal-removing oxygen and a plurality of longitudinal preheating gas passages arranged around said first passage; an oxygen injector tube extending forwardly into said first passage in spaced relation to the wall thereof but terminating at a position within said first passage spaced from the discharge end thereof; and means providing a powder distributing chamber outside of and extending around said nozzle; said nozzle having a plurality of ports extending transversely between said preheating gas passages in non-communicative relation therewith and connecting said powder distributing chamber with the space in said first passage around said oxygen injector tube.

2,444,901
OIL SEAL
Philip W. Sloan, Grosse Pointe, Mich.
Application May 31, 1945, Serial No. 596,863
13 Claims. (Cl. 286—11)

1. A sealing device comprising an annular cage of generally channel section with the channel thereof opening axially outwardly thereof, a ring of readily yieldable material closing the open side of the channel and sealed thereto, a plurality of concentric and relatively rigid rings mounted on the outer face of said yieldable ring in concentric relation with respect thereto, in radially spaced relation with respect to each other, and radially spaced relation with respect to the radially outer and inner edges of said yieldable ring, and spring means cooperating between said yieldable ring member and the opposed inner face of said cage constantly urging the central portion of said resilient ring member axially outwardly with respect to said cage.

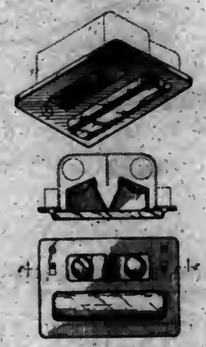
2,444,902
PROTECTIVE CIRCUIT
Charles Edward Tersch, Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application February 27, 1946, Serial No. 650,712
4 Claims. (315—20)

1. In a television system of the type having a cathode ray tube wherein an electron beam is developed and then deflected to scan a luminescent screen, and in which the value of the potential applied to said cathode ray tube for accelerating the electron beam is normally independent of the operating status of the means for deflecting said electron beam, the combination of a source of relatively high voltage which alternates in polarity, means, including an electron discharge tube having at least a filament and a plate, for rectifying the bi-directional voltage output of said source so that a substantially smooth D.-C. potential may be obtained for accelerating said electron beam, means, including a transformer, for developing energy of substantially sawtooth waveform for deflecting said electron beam, and means for deriving from said transformer energy for heating the filament of said electron discharge tube, so that said filament is heated to render said tube conductive only during operation of said deflecting means.

2,444,903
PROCESS OF VULCANIZING
Walter H. Van Buren, Philadelphia, Pa., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 22, 1945, Serial No. 584,202
2 Claims. (Cl. 18—53)

1. The method of vulcanizing material upon an annular form which comprises the steps of providing a pressure-applying wrapper having warp threads of nylon and weft threads of cotton, winding the wrapper about the material upon the form with said warp threads extending circumferentially of the form, and then contracting the nylon warp threads of the wrapper upon the material on the form by subjecting the same to the heat of vulcanization.

2,444,904
BONDED RUBBER JOINT FOR COUPLINGS AND THE LIKE AND METHOD OF MAKING THE SAME
James D. Worley, Burbank, Calif., assignor to Lord Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application December 4, 1943, Serial No. 512,944
9 Claims. (Cl. 64—13)



9. In a coupling, two face plates with opposed surfaces and interfitting parts at the inner periphery of the surfaces, a rubber member molded between and bonded to said surfaces, and a spacing ring surrounding the interfitting parts and in contact with the rubber to block the flow of rubber to said parts during molding, the spacing ring being capable of being rendered ineffective to hold the plates apart.

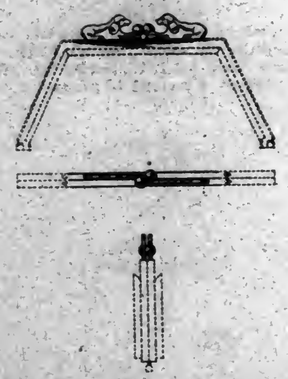
DESIGNS

JULY 6, 1948

150,104
DESIGN FOR A LIGHTING FIXTURE
Albert L. Arenberg, Highland Park, and Edward C. Zimmerman, Winnetka, Ill., assignors to Patent License Corporation, Chicago, Ill., a corporation of Illinois
Application January 10, 1947, Serial No. 136,050
Term of patent 14 years
(Cl. D48—23)

The ornamental design for a lighting fixture, substantially as shown and described.

150,105
DESIGN FOR A HAIR CURLER
John H. Atwood, Sterling, Ill.
Application March 19, 1947, Serial No. 137,745
Term of patent 7 years
(Cl. D86—10)

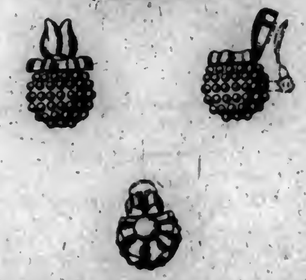


The ornamental design for a hair curler, substantially as shown.

150,106
DESIGN FOR A DOUBLE SEATED VEHICLE FOR CHILDREN
Joseph L. Baker, Wichita, Kans.
Application December 30, 1946, Serial No. 135,849
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a double seated vehicle for children, as shown.

150,107
DESIGN FOR A BAG FRAME OR SIMILAR ARTICLE
Benjamin Blacher, Providence, R. I., assignor to Blacher Brothers, Inc., a corporation of Rhode Island
Application February 11, 1948, Serial No. 144,399
Term of patent 3½ years
(Cl. D87—2)

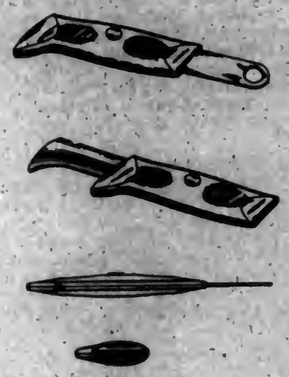


The ornamental design for a bag frame or similar article, substantially as shown and described.

150,108
DESIGN FOR A RADIO CABINET OR THE LIKE
Frank C. Burton, Grand Rapids, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 24, 1946, Serial No. 133,537
Term of patent 3½ years
(Cl. D56—4)

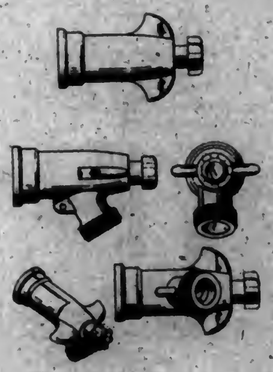
The ornamental design for a radio cabinet or the like, as shown.

150,109
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application October 28, 1946, Serial No. 134,307
Term of patent 3½ years
(Cl. D45—9)



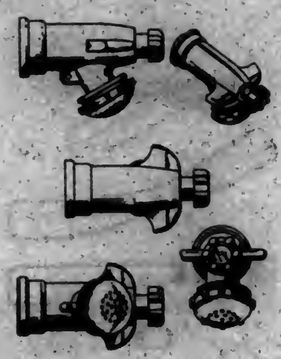
The ornamental design for an earring or similar article, substantially as shown.

150,110
DESIGN FOR A FISH LURE
Josephine M. Cole, Detroit, Mich.
Application April 11, 1946, Serial No. 128,476
Term of patent 14 years
(Cl. D31—4)



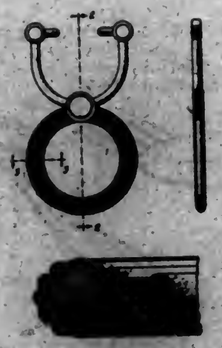
The ornamental design for a fish lure, as shown.

150,111
DESIGN FOR A SAFETY KNIFE
Harvey E. Crum, Santa Monica, Calif.
Application January 13, 1947, Serial No. 136,136
Term of patent 14 years
(Cl. D22—3)



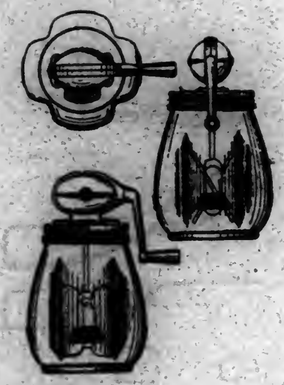
The ornamental design for a safety knife, substantially as shown.

150,112
DESIGN FOR A FAUCET OR SIMILAR ARTICLE
Walt W. Cushman, Webb City, Mo.
Application February 17, 1947, Serial No. 136,963
Term of patent 3½ years
(Cl. D91—3)



The ornamental design for a faucet or similar article, as shown and described.

150,113
DESIGN FOR A SHOWER HEAD OR SIMILAR ARTICLE
Walt W. Cushman, Webb City, Mo., and Robert H. Hansen, East Greenbush, N. Y.
Application February 17, 1947, Serial No. 136,962
Term of patent 3½ years
(Cl. D91—3)

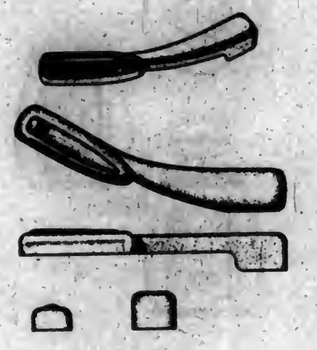


The ornamental design for a shower head or similar article, as shown.

150,114
DESIGN FOR A COMBINED HANDLE AND TEETHING RING OR SIMILAR ARTICLE
Merton Davis, South Orange, N. J., assignor to Joseph Davis Plastics Co., Arlington, N. J., a corporation of New Jersey
Application February 15, 1947, Serial No. 136,930
Term of patent 14 years
(Cl. D62—1)

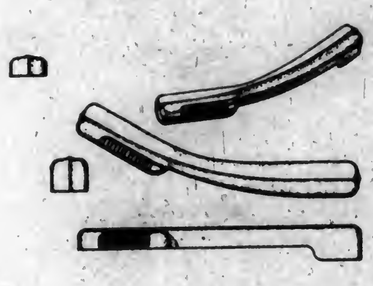
The ornamental design for a combined handle and teething ring or similar article, as shown.

150,115
DESIGN FOR A CHURN
Jack P. Dacey, St. Louis, Mo.
Application August 21, 1946, Serial No. 133,004
Term of patent 7 years
(Cl. D23—1)



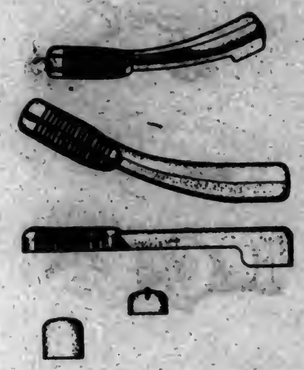
The ornamental design for a churn, substantially as shown.

150,116
DESIGN FOR A HOLDING PIN
Ben Elkins, Brooklyn, N. Y.
Application December 5, 1946, Serial No. 135,272
Term of patent 3½ years
(Cl. D54—9)



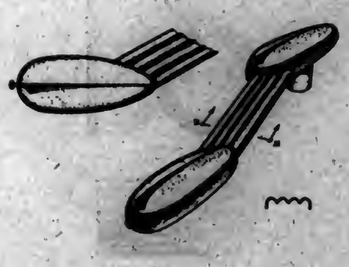
The ornamental design for a holding pin, substantially as shown.

150,117
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application December 12, 1946, Serial No. 135,453
Term of patent 7 years
(Cl. D26—14)



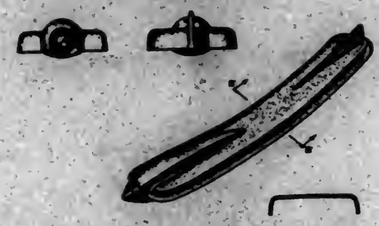
The ornamental design for a phonograph tone arm or the like, as shown.

150,118
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application December 12, 1946, Serial No. 135,454
Term of patent 7 years
(Cl. D26—14)



The ornmental design for a phonograph tone arm or the like, as shown.

150,119
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application December 12, 1946, Serial No. 135,455
Term of patent 7 years
(Cl. D26—14)



The ornamental design for a phonograph tone arm or the like, as shown.

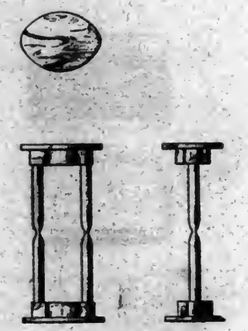
150,120
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,982
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like as shown.

150,121
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,987
Term of patent 7 years
(Cl. D26—14)

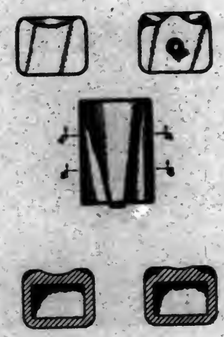
The ornamental design for a phonograph tone arm or the like, as shown.

150,122
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,988
Term of patent 7 years
(Cl. D26—14)



The ornamental design for a phonograph tone arm or the like, as shown.

150,123
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,992
Term of patent 7 years
(Cl. D26—14)

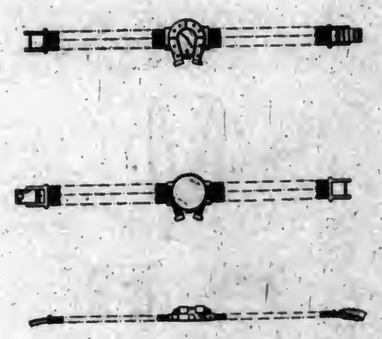


The ornamental design for a phonograph tone arm or the like, as shown.

150,124
DESIGN FOR AN HOURGLASS FRAME OR SIMILAR ARTICLE
Charles Fischett, South Ozone Park, N. Y.
Application February 28, 1947, Serial No. 137,225
Term of patent 14 years
(Cl. D42—7)

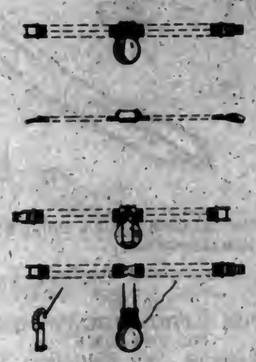
The ornamental design for an hourglass frame or similar article, substantially as shown.

150,125
DESIGN FOR A HEAT APPLICATOR FOR HUMAN USE
James W. Gardner, Bremerton, Wash.
Application March 11, 1946, Serial No. 127,256
Term of patent 14 years
(Cl. D83—1)



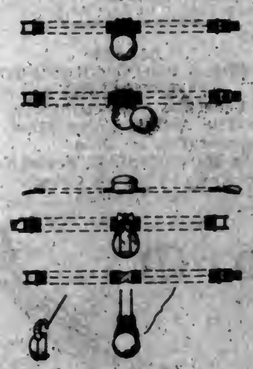
The ornamental design for a heat applicator for human use, as shown.

150,126
DESIGN FOR A RADIO RECEIVER CABINET
Norman Bel Geddes, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application December 6, 1946, Serial No. 135,301
Term of patent 7 years
(Cl. D56—4)



The ornamental design for a radio receiver cabinet, substantially as shown and described.

150,127
DESIGN FOR COMBINED BRACELET AND WATCH CASING
Markus Geduldig, New York, N. Y.
Application January 18, 1947, Serial No. 136,225
Term of patent 3½ years
(Cl. D42—8)

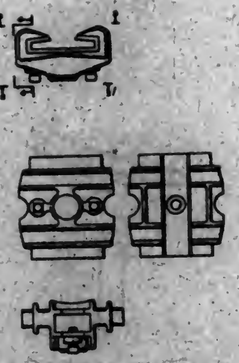


The ornamental design for a combined bracelet and watch casing, substantially as shown and described.

150,128
DESIGN FOR A COMBINED BRACELET AND DETACHABLE WATCH CASING
Markus Geduldig, New York, N. Y.
Application January 18, 1947, Serial No. 136,226
Term of patent 3½ years
(Cl. D42—8)

The ornamental design for a combined bracelet and detachable watch casing, substantially as shown and described.

150,129
DESIGN FOR A COMBINED BRACELET AND CLOSABLE WATCH CASING
Markus Geduldig, New York, N. Y.
Application January 18, 1947, Serial No. 136,227
Term of patent 3½ years
(Cl. D42—8)

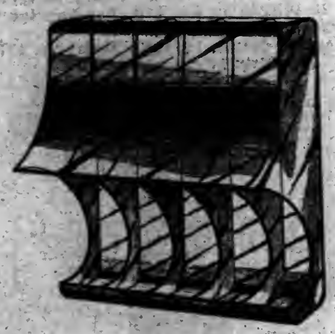


The ornamental design for a combined bracelet and closable watch casing, substantially as shown and described.

150,130
DESIGN FOR A WALL PLAQUE
Peggy T. Gordon, Los Angeles, Calif.
Application June 5, 1946, Serial No. 130,417
Term of patent 3½ years
(Cl. D32—3)

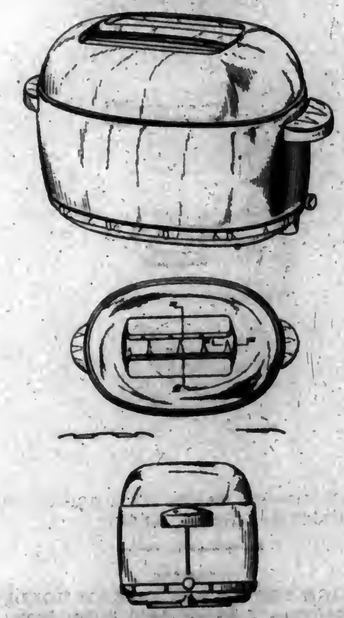
The ornamental design for a wall plaque, substantially as shown and described.

150,131
DESIGN FOR AN I-BEAM CLAMP
William T. Graham, Amarillo, Tex.
Application June 14, 1946, Serial No. 136,724
Term of patent 14 years
(Cl. D54—2)



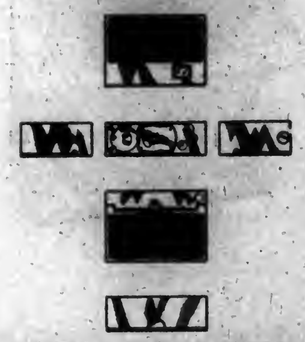
The ornamental design for an I-beam clamp, substantially as shown.

150,132
DESIGN FOR A MUSICAL INSTRUMENT OR SIMILAR ARTICLE
Joseph Green, New York, N. Y.
Application May 17, 1946, Serial No. 129,784
Term of patent 3½ years
(Cl. D56—1)



The ornamental design for a musical instrument or similar article, as shown.

150,133
DESIGN FOR A TOOTHBRUSH HOLDER
Lawrence D. Greenawald, Solon, Iowa
Application October 15, 1946, Serial No. 133,966
Term of patent 7 years
(Cl. D4—3)

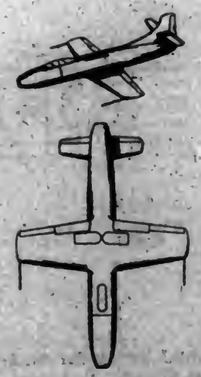


The ornamental design for a toothbrush holder, as shown.

150,124
DESIGN FOR A TOASTER
Lurelle Guild, Nereton, Conn., assignor to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application April 5, 1947, Serial No. 138,181
Term of patent 14 years
(Cl. D61—10)

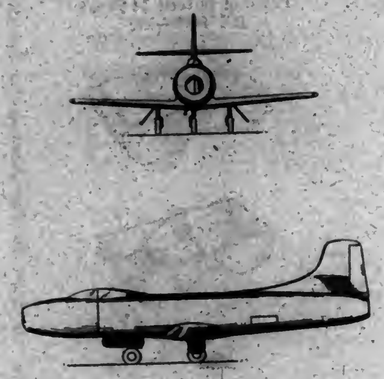
The ornamental design for a toaster substantially as shown and described.

150,135
DESIGN FOR A CAMERA
Douglas F. Hawkins, Los Angeles, and William A. Moore, West Hollywood, Calif., assignors to Wm. R. Whittaker Co., Ltd., Los Angeles, Calif., a corporation of California
Application March 10, 1947, Serial No. 137,476
Term of patent 14 years
(Cl. D61—1)



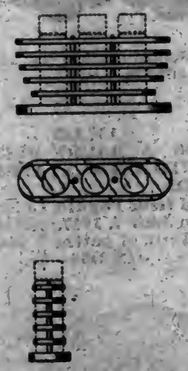
The ornamental design for a camera, as shown.

150,126
DESIGN FOR A COMBINATION TELEVISION LENS AND MOUNTING MEANS THEREFOR
Jack F. Hecht, Chicago, Ill.
Application December 2, 1947, Serial No. 142,918
Term of patent 14 years
(Cl. D61—1)

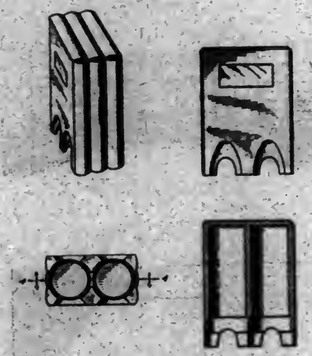


The ornamental design for a combination television lens and mounting means therefor, as shown and described.

150,127
DESIGN FOR AN AIRPLANE
Edward H. Heinemann and Leo J. Devlin, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application May 5, 1947, Serial No. 138,822
Term of patent 7 years
(Cl. D71—1)

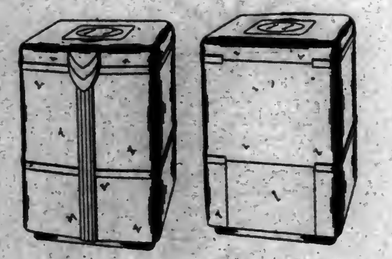


150,127—Continued



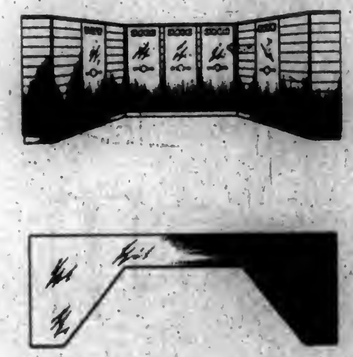
The ornamental design for an airplane, substantially as shown.

150,128
DESIGN FOR A COMBINED STAND AND PERFUME BOTTLES
Lloyd Mallett, Chicago, Ill.
Application September 16, 1946, Serial No. 133,336
Term of patent 7 years
(Cl. D60—9)



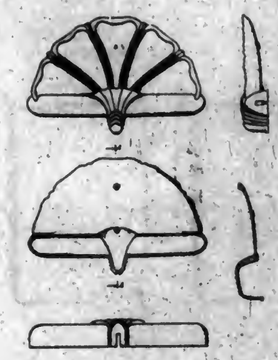
The ornamental design for a combined stand and perfume bottles, as shown and described.

150,129
DESIGN FOR A CAP FOR A TWIN LIPSTICK
Walter S. Jackson, Passaic, N. J., assignor to Twayne Cosmetic Co., Passaic, N. J., a copartnership composed of Walter S. Jackson and William Brooks
Application May 7, 1947, Serial No. 138,334
Term of patent 14 years
(Cl. D38—10)



The ornamental design for a cap for a twin lipstick, as shown.

150,140
DESIGN FOR A CASING FOR A WASHING MACHINE OR THE LIKE
Robert K. Kinoshita, Milwaukee, Wis., assignor to Appliance Corporation of America, Milwaukee, Wis., a corporation of Wisconsin
Application June 26, 1946, Serial No. 132,002
Term of patent 14 years
(Cl. D49—1)



The ornamental design for a casing for a washing machine or the like, substantially as shown.

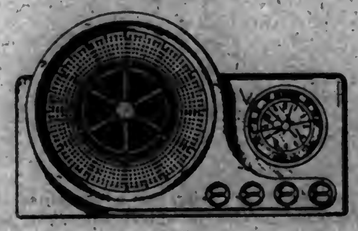
150,141
DESIGN FOR A CABINET FOR RADIO TRANSMITTER
Louis Knicp, Jr., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 16, 1946, Serial No. 129,841
Term of patent 14 years
(Cl. D36—5)

The ornamental design for a cabinet for radio transmitter, substantially as shown and described.

150,142
DESIGN FOR A BED LAMP BRACKET
Michael Henry Kruger, Malden, Mass., assignor to A. L. Smith Iron Company, Chelsea, Mass., a corporation of Massachusetts
Application May 2, 1947, Serial No. 138,784
Term of patent 3½ years
(Cl. D42—4)

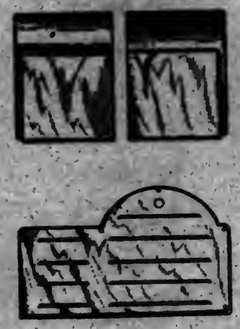
The ornamental design for a bed lamp bracket, as shown.

150,143
DESIGN FOR A COVERED COMBINED BEAUTY TRAY AND COMB HOLDER
George A. Lemke and Eleanor L. Lemke, Hollydale, Calif.
Application August 28, 1946, Serial No. 132,914
Term of patent 14 years
(Cl. D36—10)



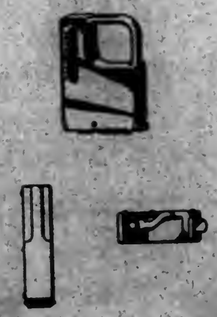
The ornamental design for a covered combined beauty tray and comb holder, as shown.

150,144
DESIGN FOR AN EMBROIDERED TRIMMING
Marianne S. Loeb, Jenkintown, Pa.
Application July 1, 1947, Serial No. 140,031
Term of patent 3½ years
(Cl. D28—1)

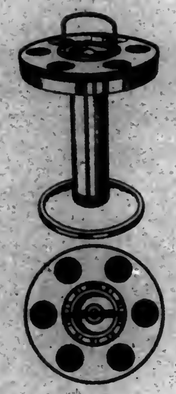


The ornamental design for an embroidered trimming, as shown.

150,145
DESIGN FOR A RADIO RECEIVER WITH TIMED AUTOMATIC STATION SELECTOR AND TUNER
John Lolli and Gene Papitto, Chicago Heights, Ill.
Application June 7, 1947, Serial No. 139,514
Term of patent 7 years
(Cl. D56—4)

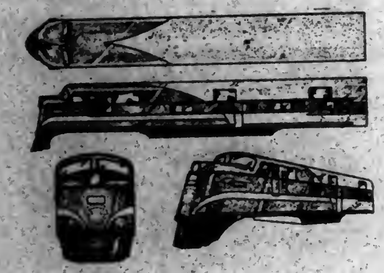


150,145—Continued



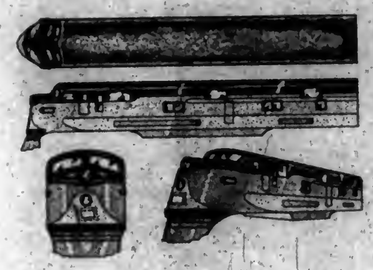
The ornamental design for a radio receiver with timed automatic station selector and tuner, as shown.

150,146
DESIGN FOR A COMBINED WEIGHING AND MEASURING DEVICE
Henry I. Mandolf and John B. Morrow, San Diego, Calif., assignors to Langley Corporation, San Diego, Calif., a corporation of California
Application August 19, 1946, Serial No. 132,642
Term of patent 14 years
(Cl. D52—6)



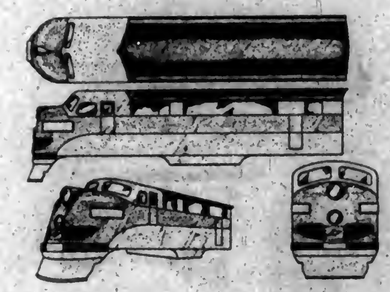
The ornamental design for a combined weighing and measuring device, substantially as shown and described.

150,147
DESIGN FOR A SMOKING STAND
Onnie Mankki, Cleveland, Ohio, assignor to Smokador Manufacturing Co., Inc., Bloomfield, N. J., a corporation of Delaware
Application July 17, 1946, Serial No. 131,655
Term of patent 14 years
(Cl. D85—2)



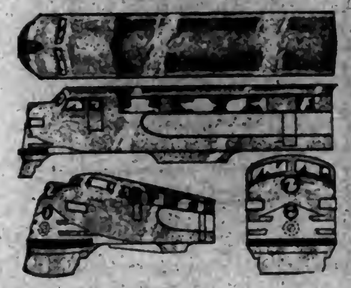
The ornamental design for a smoking stand, substantially as shown.

150,148
DESIGN FOR A LOCOMOTIVE BODY
John Markestein, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 12, 1946, Serial No. 135,419
Term of patent 14 years
(Cl. D66—1)



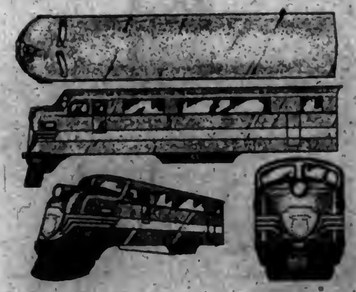
The ornamental design for a locomotive body, substantially as shown and described.

150,149
DESIGN FOR A LOCOMOTIVE BODY
John Markestein, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 12, 1946, Serial No. 135,420
Term of patent 14 years
(Cl. D66—1)



The ornamental design for a locomotive body, substantially as shown and described.

150,150
DESIGN FOR A LOCOMOTIVE BODY
John Markestein, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 12, 1946, Serial No. 135,421
Term of patent 14 years
(Cl. D66—1)



The ornamental design for a locomotive body, substantially as shown and described.

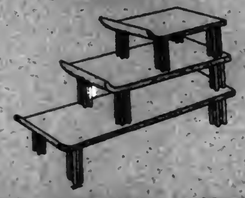
150,151
DESIGN FOR A LOCOMOTIVE BODY
John Markestein, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 12, 1946, Serial No. 135,423
Term of patent 14 years
(Cl. D66—1)

The ornamental design for a locomotive body, substantially as shown and described.

150,152
DESIGN FOR A LOCOMOTIVE BODY
John Markestein, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 12, 1946, Serial No. 135,424
Term of patent 14 years
(Cl. D66—1)

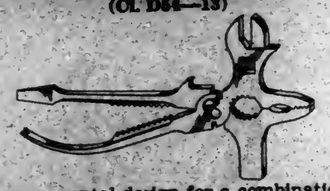
The ornamental design for a locomotive body, substantially as shown and described.

150,153
DESIGN FOR A LOCOMOTIVE BODY
John Markestein, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 12, 1946, Serial No. 135,426
Term of patent 14 years
(Cl. D66—1)



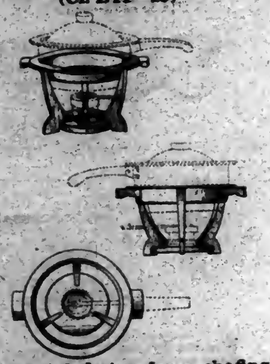
The ornamental design for a locomotive body, substantially as shown and described.

150,154
DESIGN FOR A MACHINE FOR VENDING CIGARETTES OR THE LIKE
Fred L. Meagher, Syosset, N. Y., assignor to Mills Industries, Incorporated, Chicago, Ill., a corporation of Illinois
Application March 9, 1946, Serial No. 127,303
Term of patent 7 years
(Cl. D52—3)



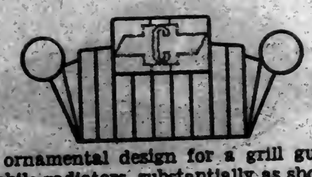
The ornamental design for a machine for vending cigarettes or the like, as shown and described.

150,155
DESIGN FOR A TABLE
James Mont, New York, N. Y.
Application February 5, 1947, Serial No. 136,712
Term of patent 7 years
(Cl. D32—14)



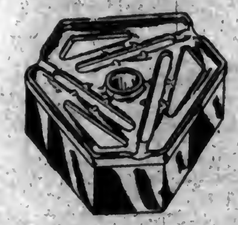
The ornamental design for a table, substantially as shown and described.

150,156
DESIGN FOR A COMBINATION TOOL
Milton C. Neil, Los Angeles, Calif.
Application March 26, 1946, Serial No. 127,962
Term of patent 3½ years
(Cl. D54—13)



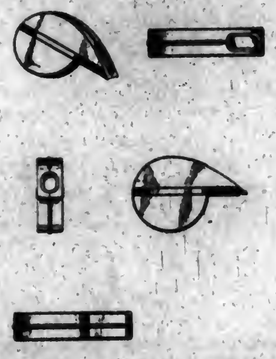
The ornamental design for a combination tool, as shown.

150,157
DESIGN FOR A CHAFING DISH
Daniel C. O'Connell, New York, N. Y., assignor to Sterno, Inc., New York, N. Y., a corporation of New York
Original design application January 16, 1946, Serial No. 125,616. Divided and this application July 5, 1947, Serial No. 140,109
Term of patent 14 years
(Cl. D44—15)



The ornamental design for a chafing dish, as shown and described.

150,158
DESIGN FOR A GRILL GUARD FOR AUTOMOBILE RADIATORS
Harry Phillips, New York, N. Y., assignor to State Welding Works, Inc., New York, N. Y.
Application April 14, 1947, Serial No. 138,347
Term of patent 3½ years
(Cl. D14—6)



The ornamental design for a grill guard for automobile radiators, substantially as shown and described.

150,159
DESIGN FOR AN ASH TRAY
Philip Reynolds, Forest Hills, N. Y.
Application February 24, 1947, Serial No. 137,136
Term of patent 3½ years
(Cl. D85—2)

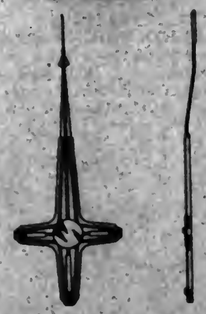
The ornamental design for an ash tray, as shown.

150,160
DESIGN FOR A CONTAINER FOR ADHESIVE TAPE OR THE LIKE
Hubert I. Salsbury, Los Angeles, Calif.
Application September 30, 1946, Serial No. 133,651
Term of patent 14 years
(Cl. D58—13)

The ornamental design for a container for adhesive tape or the like, as shown.

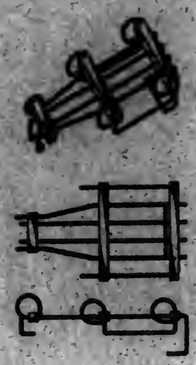
150,161
DESIGN FOR A MOTOR CAR
Roger Laurent Jean Baptiste Sanmori, Monaco, Monaco
Application June 1, 1946, Serial No. 130,312
In France March 12, 1945
Term of patent 14 years
(Cl. D14—3)

150,161—Continued



The ornamental design for a motor car, as shown.

150,162
DESIGN FOR A DISPLAY DEVICE
Howard Seaman, Chicago, Ill.
Application July 31, 1946, Serial No. 132,120
Term of patent 3½ years
(Cl. D60—9)

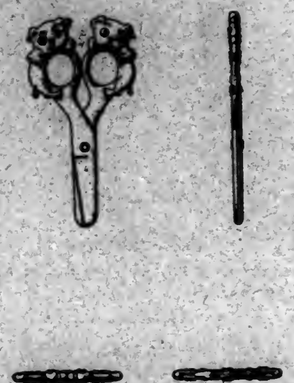


The ornamental design for a display device, as shown.

150,163
DESIGN FOR A SCALE INDICATOR
Lester D. Singleton, Rutland, Vt., assignor to The Howe Scale Company, a corporation of Vermont
Application June 3, 1946, Serial No. 130,358
Term of patent 14 years
(Cl. D62—10)

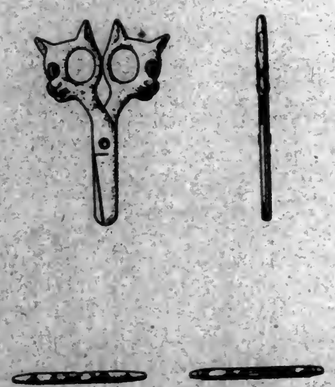
The ornamental design for a scale indicator, substantially as shown.

150,164
DESIGN FOR A FLATIRON CRADLE
Nikolai N. Skaredoff, New York, N. Y.
Application October 19, 1946, Serial No. 134,166
Term of patent 7 years
(Cl. D49—6)



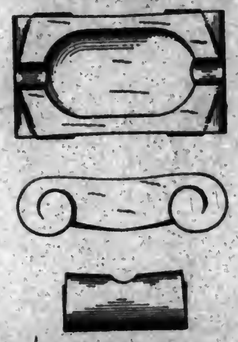
The ornamental design for a flatiron cradle, substantially as shown.

150,165
DESIGN FOR A TABLECLOTH OR SIMILAR ARTICLE
George Sklar, Philadelphia, Pa.
Application August 15, 1947, Serial No. 140,882
Term of patent 3½ years
(Cl. D92—26)



The ornamental design for a tablecloth or similar article, substantially as shown.

150,166
DESIGN FOR SCISSORS
George J. Staab, Springfield, N. J.
Application March 25, 1947, Serial No. 137,845
Term of patent 3½ years
(Cl. D22—5)

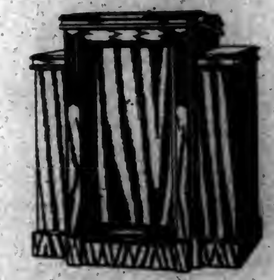


The ornamental design for scissors, as shown.

150,167
DESIGN FOR SCISSORS
George J. Staab, Springfield, N. J.
Application March 25, 1947, Serial No. 137,846
Term of patent 3½ years
(Cl. D22—5)

The ornamental design for scissors, as shown.

150,168
DESIGN FOR AN ASH TRAY
Joseph B. Stier, New York, N. Y.
Application March 15, 1947, Serial No. 137,637
Term of patent 14 years
(Cl. D85—2)

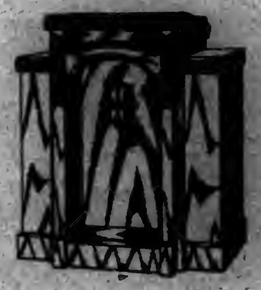


The ornamental design for an ash tray, substantially as shown.

150,169
DESIGN FOR A MATCH BOX HOLDER
Charles E. Stockton, Manteca, Calif.
Application June 7, 1946, Serial No. 130,498
Term of patent 3½ years
(Cl. D48—28)

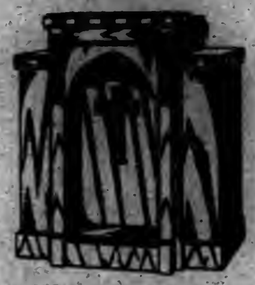
The ornamental design for a match box holder, as shown and described.

150,170
DESIGN FOR A PULPIT
Henry J. Taselaar, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application January 25, 1947, Serial No. 136,408
Term of patent 14 years
(Cl. D32—10)



The ornamental design for a pulpit, substantially as shown and described.

150,171
DESIGN FOR A PULPIT
Henry J. Taselaar, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application January 25, 1947, Serial No. 136,409
Term of patent 14 years
(Cl. D32—10)

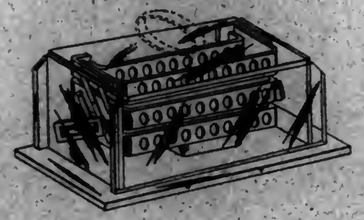


The ornamental design for a pulpit, substantially as shown and described.

150,172
DESIGN FOR A PULPIT
Henry J. Taselaar, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application January 25, 1947, Serial No. 136,410
Term of patent 14 years
(Cl. D32—10)

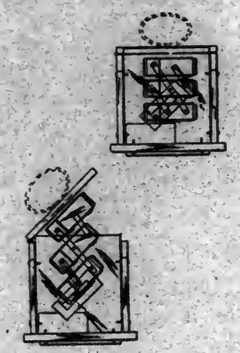
The ornamental design for a pulpit, substantially as shown and described.

150,173
DESIGN FOR A PULPIT
Henry J. Taselaar, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application January 25, 1947, Serial No. 136,411
Term of patent 14 years
(Cl. D32—10)



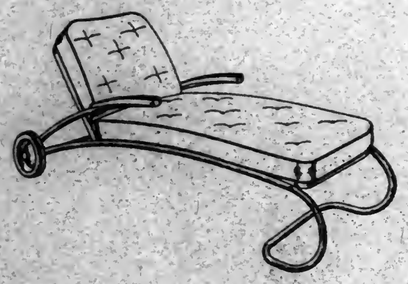
The ornamental design for a pulpit, substantially as shown and described.

150,174
DESIGN FOR A PULPIT
Henry J. Taselaar, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application January 25, 1947, Serial No. 136,412
Term of patent 14 years
(Cl. D32—10)

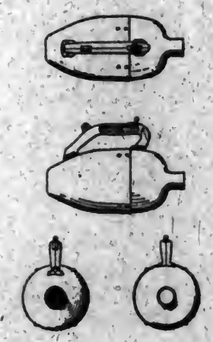


The ornamental design for a pulpit, substantially as shown and described.

150,175
DESIGN FOR A CIGARETTE RACK
Haywood Thomas, New York, N. Y.
Application August 31, 1946, Serial No. 133,007
Term of patent 3½ years
(Cl. D85—2)



150,175—Continued

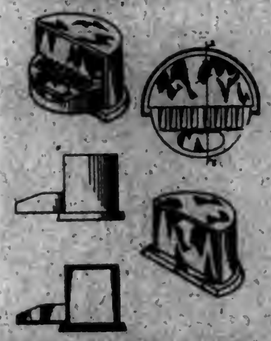


The ornamental design for a cigarette rack, substantially as shown and described.

150,176
DESIGN FOR A CHAISE LONGUE
William W. Vincent, Jr., Kenosha, Wis., assignor to The Vincent-McCall Company, Kenosha, Wis., a corporation of Wisconsin
Application November 22, 1946, Serial No. 135,024
Term of patent 14 years
(Cl. D15—11)

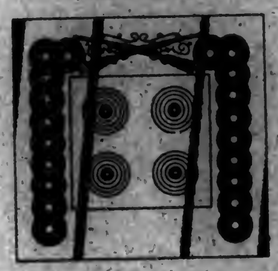
The ornamental design for a chaise longue, substantially as shown and described.

150,177
DESIGN FOR A MOTOR DRIVEN BLOWER FOR CLEANING, DRYING, AND SPRAYING PURPOSES
Edwin W. Vose, Orange, N. J., assignor to Spray Process Co. Inc., a corporation of New York
Application August 27, 1946, Serial No. 132,897
Term of patent 14 years
(Cl. D62—2)



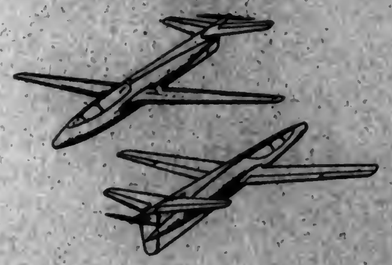
The ornamental design for a motor driven blower for cleaning, drying, and spraying purposes, as shown.

150,178
DESIGN FOR A BEDROOM SLIPPER OR SIMILAR ARTICLE
John Nugent Walters, New York, N. Y.
Application June 18, 1947, Serial No. 139,793
Term of patent 14 years
(Cl. D7—7)



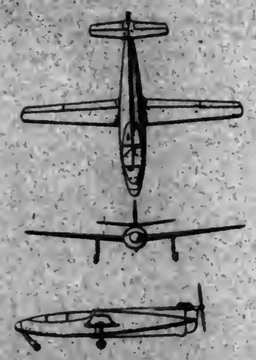
The ornamental design for a bedroom slipper or similar article, substantially as shown.

150,179
DESIGN FOR A CIGARETTE HUMIDOR OR THE LIKE
Pauline B. Walters, Los Angeles, Calif.
Application July 21, 1947, Serial No. 140,423
Term of patent 14 years
(Cl. D85—2)



The ornamental design for a cigarette humidor or the like, substantially as shown.

150,180
DESIGN FOR A TARGET
Burnley Weaver, Asheville, N. C.
Application December 30, 1946, Serial No. 135,845
Term of patent 3½ years
(Cl. D30—1)



The ornamental design for a target, as shown and described.

150,181
DESIGN FOR AN AIRPLANE
Michel Wibault, New York, N. Y.
Application September 21, 1946, Serial No. 133,494
Term of patent 14 years
(Cl. D71—1)

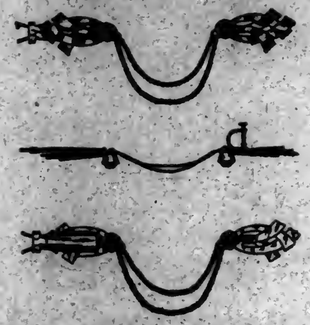
150,181—Continued

The ornamental design for an airplane, as shown.

150,182
DESIGN FOR A SWEATER
Berté A. Wiechmann and Fay W. Robson, Portland, Oreg., assignors to Jantzen Knitting Mills, a corporation of Oregon
Application March 7, 1947, Serial No. 137,450
Term of patent 3½ years
(Cl. D2—4)

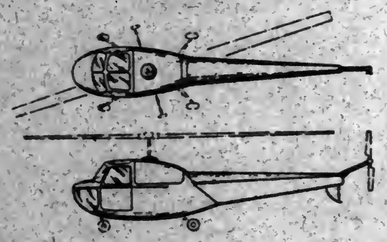
The ornamental design for a sweater, substantially as shown and described.

150,183
DESIGN FOR A SWEATER
Berté A. Wiechmann and Fay W. Robson, Portland, Oreg., assignors to Jantzen Knitting Mills, a corporation of Oregon
Application March 7, 1947, Serial No. 137,451
Term of patent 3½ years
(Cl. D2—4)



The ornamental design for a sweater, substantially as shown and described.

150,184
DESIGN FOR A SWEATER
Berté A. Wiechmann and Fay W. Robson, Portland, Oreg., assignors to Jantzen Knitting Mills, a corporation of Oregon
Application March 7, 1947, Serial No. 137,453
Term of patent 3½ years
(Cl. D2—4)

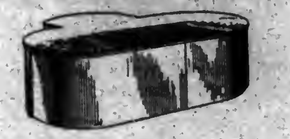


The ornamental design for a sweater, substantially as shown and described.

150,185
DESIGN FOR A COMBINED EARRING AND BARRETTE
Arno Wraslowsky, New York, N. Y.
Application May 22, 1947, Serial No. 139,217
Term of patent 3½ years
(Cl. D45—9)

The ornamental design for a combined earring and barrette, substantially as shown.

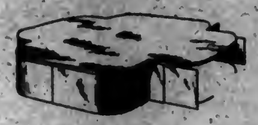
150,186
DESIGN FOR A HELICOPTER
Arthur M. Young, Buffalo, N. Y., assignor to Bell Aircraft Corporation, Wheatfield, N. Y.
Application November 14, 1946, Serial No. 134,773
Term of patent 14 years
(Cl. D71—1)



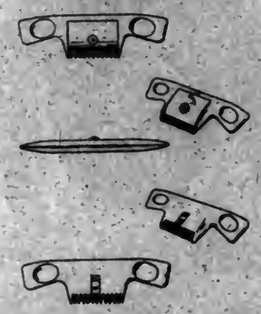
150,186—Continued

The ornamental design for a helicopter, as shown and described.

150,187
DESIGN FOR AN AIRPLANE HANGAR
Dwen R. Younger, San Francisco, Calif.
Application January 2, 1947, Serial No. 135,892
Term of patent 14 years
(Cl. D12—1)



The ornamental design for an airplane hangar, substantially as shown.



150,188
DESIGN FOR AN AIRPLANE HANGAR
Dwen R. Younger, San Francisco, Calif.
Application January 23, 1947, Serial No. 136,343
Term of patent 14 years
(Cl. D12—1)

The ornamental design for an airplane hangar, substantially as shown and described.

150,189
DESIGN FOR A HAIR TRIMMER
Cyril P. Zurlinden, Rocky River, Ohio
Application January 13, 1947, Serial No. 136,114
Term of patent 14 years
(Cl. D22—3)

The ornamental design for a hair trimmer, as shown.

Gasoline. Transcontinental Oil Company. 244,901. renewed July 21, 1948. O. G. July 6.
Gasoline and lubricating oils. Capitol Tire and Rubber Co., Inc. 380,904, Aug. 26, 1941. Republished July 6.
Gasoline and lubricating oils. Capitol Tire and Rubber Co., Inc. 400,207, Mar. 2, 1943. Republished July 6.
Lubricants, consisting of oils and greases. A. C. Busby. 09,330, re-renewed June 9, 1948. O. G. July 6.
Lubricants containing graphite. Acheson Oildag Company. 240,027, renewed Mar. 20, 1948. O. G. July 6.
Lubricants containing graphite and water. E. G. Acheson. 68,738, re-renewed Apr. 28, 1948. O. G. July 6.
Oils and greases, Lubricating. Inter-State Oil Company. 239,014, renewed Feb. 21, 1948. O. G. July 6.
Oils for gas engines and motors, Lubricating. New York & New Jersey Lubricants Co. 100,872, Oct. 27, 1914. Republished July 6.
Oils, Range and furnace fuel. Bay Oil Company, Inc. 347,996, July 13, 1937. New certificate. O. G. July 6.
Petroleum products. Standard Oil Company. 235,800, renewed Nov. 29, 1947. O. G. July 6.
Petroleum products. Sunset Oil Company. 392,717, Jan. 13, 1942. Republished July 6.

CLASS 16

Carbon black. Godfrey L. Cabot, Inc. 170,779, July 24, 1923. Republished July 6.
Carbon black. Godfrey L. Cabot, Inc. 174,488, Oct. 16, 1923. Republished July 6.
Carbon black. Godfrey L. Cabot, Inc. 290,573, Dec. 13, 1932. Republished July 6.
Carbon black. Godfrey L. Cabot, Inc. 302,707, Apr. 25, 1933. Republished July 6.
Colors and pigments, ground and powdered white paints, oils, and essences for paints, etc., Ground and powdered. Les Fils de m. Haguenauer Aine. 218,640, renewed Sept. 28, 1946. O. G. July 6.
Enamels, paste paints, japans, etc. Patek Brothers. 146,505, Nov. 15, 1921. Republished July 6.
Finish for wood floors, Liquid oil-based. Hillyard Chemical Company. 439,646, July 6; Serial No. 501,966.
Paint, bonding coat paints, etc., Liquid asphalt asbestos fibre roof. G. G. Walters. 286,042, Mar. 25, 1941. Republished July 6.
Paint, Disinfecting. Carbola Chemical Co., Inc. 414,315-16, June 5, 1945. Republished July 6.
Paint, Mixed aluminum. Crescent Bronze Powder Co. 419,906, Mar. 12, 1946. Republished July 6.
Paint pigments, bronze powder, Metallic. Crescent Bronze Powder Co. 411,721, Jan. 30, 1945. Republished July 6.
Paints and paint enamels, Ready-mixed. C. Drabek. 176,060, Nov. 13, 1923. Republished July 6.
Paints, and reducing oil for paints, Ready-mixed. Poweraire Corporation. 439,647, July 6; Serial No. 502,326.
Paints and varnishes, Ready-mixed. Patek Brothers. 119,109, Oct. 23, 1917. Published July 6.
Paints in dry pastes or ready-mixed form. John Lucas & Company, Incorporated. 500,935, July 6; Serial No. 504,191.
Paints, paint enamels, and varnish, Ready-mixed oil. Harrison Paint & Varnish Company. 371,933, Oct. 17, 1939. Republished July 6.
Paints, varnishes, and paint enamels, Ready-mixed. C. Drabek. 174,377, Oct. 16, 1923. Republished July 6.
Paints, varnishes, etc., Dry, paste, and ready-mixed. S. C. Wagenman Paint Stores Company. 195,137, Feb. 17, 1925. Republished July 6.
Paints, varnishes, paint colors, etc. Ball Chemical Company. 62,503, May 14, 1907. Republished July 6.
Paints, varnishes, paint enamels, etc., Dry, paste, and ready-mixed. S. C. Wagenman Paint Stores Company. 221,711, Dec. 7, 1926. Republished July 6.
Paints, varnishes, paint enamels, etc., Ready-mixed. C. Drabek. 175,956, Nov. 13, 1923. Republished July 6.
Pigments, vehicles for metallic pigments, and mixed metallic pigment paints, Metallic. Oroline Products Co. 411,885, Feb. 6, 1945. Republished July 6.
Polish, Furniture. J. W. Smith. 439,645, July 6; Serial 500,900.
Priming coat material, Protective. Flood Company. 331,671, Jan. 14, 1936. Republished July 6.
Varnishes, surfaces, and fillers, Exterior, interior, and floor-finishing. O'Brien Varnish Co. 32,677, Apr. 4, 1899. Republished July 6.
Wax floor dressing, Liquid. Hillyard Chemical Company. 439,652, July 6; Serial No. 500,092.

CLASS 17

Cigars, cigarettes, smoking tobacco, etc. De Nobili Cigar Company. 241,071, renewed Apr. 17, 1948. O. G. July 6.
Tobacco, Pipe. Brooks Brothers. 378,603, June 11, 1940. Republished July 6.
Tobacco, Smoking. Brooks Brothers. 407,895, July 4, 1944. Republished July 6.
Tobacco, Smoking. Brooks Brothers. 431,448, July 22, 1947. Republished July 6.

CLASS 19

Bicycles. Cleveland Welding Company. 332,192, Feb. 4, 1936. Republished July 6.
Bicycles. Cleveland Welding Company. 341,490, Dec. 8, 1936. Republished July 6.
Bicycles. Cleveland Welding Company. 341,762, Dec. 22, 1936. Republished July 6.
Bicycles. Cleveland Welding Company. 345,937, May 11, 1937. Republished July 6.
Bicycles. Excelsior Cycle Company. 229,406, renewed June 28, 1947. O. G. July 6.
Bicycles. Monark Silver King, Inc. 500,929, July 6; Serial No. 539,821, published Mar. 30, 1948.
Covers, Auto seat. Atlas Auto Seat Cover Co. 439,641, July 6; Serial No. 484,658.
Motorcycles, bicycles, side cars, and parcel cars. Harley-Davidson Motor Company. 135,864, renewed Jan. 5, 1948. O. G. July 6.
Vehicles, Motor-driven. General Motors Corporation. 202,413, renewed Jan. 5, 1948. O. G. July 6.
Wheels and parts thereof, etc., Vehicle. Cleveland Welding Company. 261,180, Sept 10, 1929. Republished July 6.

CLASS 21

Annunciators. Elevator Supplies Co., Inc. 210,391, Mar. 16, 1926. Republished July 6.
Antennas, Rotatable. Gordon Specialties Company. 439,534, July 6; Serial No. 505,748, published Apr. 6, 1948.
Apparatus for remotely indicating and controlling the position of rotatable antennas. Gordon Specialties Company. 439,533, July 6; Serial No. 505,747, published Apr. 6, 1948.

Arresters and parts thereof, Electrical surge. James R. Kearney Corporation. 358,745, July 26, 1938. Republished July 6.

Articles composed wholly or in part of natural and/or synthetic rubber. Radio Corporation of America. 439,637, July 6; Serial No. 525,949, published Apr. 6, 1948.

Batteries and storage-battery plates, Storage. General Storage Battery Co. 66,510, re-renewed Dec. 10, 1947. O. G. July 6.

Batteries, Storage. Goodyear Tire & Rubber Company, Inc. 325,443, June 25, 1935. Republished July 6.

Batteries, Storage. Pep Boys—Manny, Moe & Jack. 265,054, Dec. 10, 1929. Republished July 6.

Batteries, Storage. United States Rubber Company. 500,869–71, July 6; Serial Nos. 531,396–8, published Apr. 6, 1948.

Bottle warmer, Electrically heated baby. Aut-O-Tot Company. 439,594, July 6; Serial No. 517,690, published Mar. 30, 1948.

Cabinets. Cutler-Hammer, Inc. 383,648, Dec. 17, 1940. Republished July 6.

Casings, Moisture proof protective. Fusite Corporation. 439,615, July 6; Serial No. 523,203, published Apr. 6, 1948.

Ceramic capacitors. Globe-Union Inc. 500,842, July 6; Serial No. 529,632, published Mar. 23, 1948.

Circuit-controlling devices and switches, etc., Pressure, vacuum, thermostatic and temperature. Federal Gauge Company. 156,660, July 11, 1922. Republished July 6.

Coffee makers, Electric. Chicago Electric Manufacturing Company. 500,837, July 6; Serial No. 529,863, published Apr. 6, 1948.

Conductors, wires, and cables, Insulated electrical. Rome Cable Corporation. 500,843, July 6; Serial No. 529,709, published Mar. 30, 1948.

Connectors, Electrical. James R. Kearney Corporation. 333,427, Mar. 24, 1936. Republished July 6.

Connectors, lightning and surge arresters, electrical clamps, etc., Electrical. James R. Kearney Corporation. 358,778, July 26, 1938. Republished July 6.

Electric controls. Mercoid Corporation. 364,094, Feb. 1, 1938. Republished July 6.

Electric controls. Mercoid Corporation. 356,608, May 3, 1938. Republished July 6.

Electrical equipment. International Brotherhood of Electrical Workers. 439,507, July 6; Serial No. 491,324, published Mar. 18, 1947.

Fans, Electric. Chicago Electric Manufacturing Company. 500,836, July 6; Serial No. 529,362, published Apr. 6, 1948.

Fans, Electric. Torrington Manufacturing Company. 337,040, July 26, 1936. Republished July 6.

Flashers, Thermostatic. Reynolds Electric Co. 500,821, July 6; Serial No. 527,920, published Mar. 23, 1948.

Flashlights. Floodbeem Flashlight Company. 439,545, July 6; Serial No. 508,844, published Apr. 6, 1948.

Flashlights, Pocket electric. V. Lebow. 439,501, July 6; Serial No. 484,348, published Dec. 11, 1945.

Furnaces, Electric. Ajax Electric Company, Inc. 500,794, July 6; Serial No. 499,186, published Apr. 6, 1948.

Fuses, plug fuses, mica-top plug fuses, etc., Nonrenewable enclosed. Chicago Fuse Mfg. Co. 239,189, Feb. 21, 1928. Republished July 6.

Generators, Electronic high frequency. J. B. Cunningham. 439,569, July 6; Serial No. 514,578, published Mar. 30, 1948.

Heaters, Electric space. Swartzbaugh Manufacturing Company. 439,650, July 6; Serial No. 504,458.

Heating jackets for laboratory flasks, Electrical. Gyco Instruments, Inc. 439,525, July 6; Serial No. 503,726, published Feb. 18, 1947.

Insulating material. Cutler-Hammer Mfg. Co. 97,127, May 19, 1914. Republished July 6.

Lamps, Electric portable. Sandel Manufacturing Co. 309,664, Jan. 28, 1934. Republished July 6.

Lighting equipment, Ultraviolet. Switzer Brothers. 439,522, July 6; Serial No. 503,480, published Mar. 23, 1948.

Lights, Electric stop. Teleoptic Company. 500,808, July 6; Serial No. 518,631, published Apr. 6, 1948.

Lights for automobiles, Electric driving. Teleoptic Company. 500,806, July 6; Serial No. 517,876, published Apr. 6, 1948.

Metal depositing apparatus, Metallising Company of America. 439,500, July 6; Serial No. 470,836, published Mar. 30, 1948.

Mixers and electrical fans, Electrically driven liquid. United Electrical Manufacturing Company. 238,519, Oct. 14, 1927. Republished July 6.

Motors, Electrical. Hansen Manufacturing Company, Incorporated. 500,804, July 6; Serial No. 511,811, published Mar. 30, 1948.

Motors, Electrical hollow shaft. U. S. Electrical Motors, Inc. 439,601, July 6; Serial No. 519,385, published Mar. 30, 1948.

Motors, Vertical hollow shaft electrical. U. S. Electrical Motors, Inc. 439,602, July 6; Serial No. 519,388, published Mar. 30, 1948.

Ovens heated by electrostatic and magnetic fields, Industrial. Federal Telephone and Radio Corporation. 439,538, July 6; Serial No. 506,748, published Mar. 30, 1948.

Phonographs, Electrical. Waters Conley Company. 500,852, July 6; Serial No. 530,789, published Mar. 30, 1948.

Photo-electric eye actuated electrical apparatus. Electronic Advertising, Inc. 439,508, July 6; Serial No. 496,900, published Mar. 30, 1948.

Radio receiving sets. Hallicrafters Co. 500,934, July 6; Serial No. 501,384.

Radio receiving sets and parts thereof, radio antenna, and transmission lines. E. Medell. 439,654, July 6; Serial No. 515,576.

Radio receiving sets and radio phonograph combination sets. Magnavox Company. 500,877–8, July 6; Serial Nos. 532,040–1, published Apr. 6, 1948.

Resistances and resistance units, Electric. Cutler-Hammer, Inc. 282,404, Apr. 21, 1931. Republished July 6.

Switches and phasing transformers, Combined meter test. Superior Switchboard & Devices Company. 270,360, May 6, 1930. Republished July 6.

Switches, Electric. James R. Kearney Corporation. 313,893, May 29, 1934. Republished July 6.

Switches, Fuse. James R. Kearney Corporation. 341,349, Dec. 8, 1936. Republished July 6.

Telephone annunciators, residence annunciators, etc. Graybar Electric Company, Inc. 242,338–9, renewed May 22, 1948. O. G. July 6.

Trimmers, Electrical hedge. J. L. Kaufman Manufacturing Company. 415,333, Aug. 1, 1945. Republished July 6.

Tube amplifying units for amplifying music, Electron. Crystal Research Laboratories, Incorporated. 439,592, July 6; Serial No. 517,185, published Apr. 6, 1948.

Unitary control system. Cutler-Hammer, Inc. 278,665, Dec. 23, 1930. Republished July 6.

Wire, Insulated. Carolina Industrial Plastics Corp. 500,859, July 6; Serial No. 531,094, published Apr. 6, 1948.

Wires, Lead. Federal Gauge Co. 208,852, Feb. 9, 1926. Republished July 6.

CLASS 22

Baits, Artificial. James Heddon's and Sons. 227,405, May 3, 1927. Republished July 6.

Baits, Artificial. James Heddon's Sons. 340,269, Nov. 2, 1936. Republished July 6.

Building-blocks, play-blocks, and blocks for games. Halsam Products Company. 134,675, Sept. 14, 1920. Republished July 6.

Fish lures. James Heddon's Sons. 373,519, Dec. 12, 1939. Republished July 6.

Fish lures. James Heddon's Sons. 376,003, Mar. 12, 1940. Republished July 6.

Fish lures. James Heddon's Sons. 389,057–8, July 22, 1941. Republished July 6.

Fishing rods. James Heddon's Sons. 305,165, Aug. 5, 1933. Republished July 6.

Fishing rods. James Heddon's Sons. 418,307, Dec. 11, 1945. Republished July 6.

Fishing rods. James Heddon's Sons. 428,563, Mar. 25, 1947. Republished July 6.

Golf bags, golf sticks, playing cards, etc. Brooks Brothers. 404,791, Dec. 21, 1943. Republished July 6.

Gymnasium and playground apparatus. Fred Medart Manufacturing Company. 280,236, Feb. 10, 1931. Republished July 6.

Shafts for golf clubs, Steel. James Heddon's Sons. 366,877, May 2, 1939. Republished July 6.

Toy blocks. Halsam Products Company. 247,844, July 6, 1937. Republished July 6.

Toy building blocks. Elgo Plastics, Inc. 391,878, Nov. 25, 1941. Republished July 6.

Toy play houses, theaters, wayside stores, etc. Rochester Folding Box Co. 272,994, July 15, 1930. Republished July 6.

Velocipedes for children. Metal Specialties Co., Inc. 439,642, July 6; Serial No. 493,795.

CLASS 23

Automobile accessories. Jambor Tool & Stamping Company. 239,770, renewed Mar. 13, 1948. O. G. July 6.

Bearings, Engine. McQuay-Norris Manufacturing Company. 424,458, Oct. 8, 1946. Republished July 6.

Conveyors, Vibratory. Ajax Flexible Coupling Co. Inc. 406,288, Mar. 21, 1944. Republished July 6.

Crushers for crushing coal, corn, and cobs, etc. C. O. Bartlett & Snow Company. 150,723, Jan. 10, 1922. Republished July 6.

Cutters, Feed and ensilage. J. Dick. 68,214, re-renewed Mar. 17, 1948. O. G. July 6.

Extractors. Crescent Belt Fastener Company. 180,292, Feb. 26, 1924. Republished July 6.

Grips for electric cable. James R. Kearney Corporation. 374,549, Jan. 16, 1940. Republished July 6.

Hoists and trolleys. Wright Mfg. Co. 128,906, Jan. 13, 1920. Republished July 6.

India-rubber, ink-erasers, pencil erasers. L. & C. Hardtmuth. 31,572, re-renewed May 24, 1948. O. G. July 6.

Knives, forks, and other table flatware, etc. American Art Alloys Inc. 401,616–18, May 25, 1943. Republished July 6.

Lawn mowers. Cushman Motor Works. 221,002, renewed Nov. 23, 1946. O. G. July 6.

Lawn mowers and parts thereof. Pennsylvania Lawn Motor Works. 357,795, June 14, 1938. Republished July 6.

Lawn mowers, Hand and motor-propelled. Yard-Man, Inc. 378,647, June 11, 1940. Republished July 6.

Machines for applying price marking indicia to merchandise. Monarch Marking System Co. 385,843–4, Mar. 18, 1941. Republished July 6.

Mirrors, clamps, pole grips, sale grip extensions, etc. Inspection. James R. Kearney Corporation. 369,580, Aug. 1, 1939. Republished July 6.

Motors and outboard motors, Marine. Chris-Craft Corporation. 426,837, Jan. 14, 1947. Republished July 6.

Power presses and parts thereof. Ferracute Machine Company. 386,550, Apr. 15, 1941. Republished July 6.

Pressure lubricating equipment, Portable. Aro Equipment Corporation. 284,656, July 7, 1931. Republished July 6.

Razors and knives. Kinfolks, Incorporated. 237,876, renewed Jan. 17, 1948. O. G. July 6.

Replacement units for oil-refining devices. Luber-Finer Inc. 388,837, July 15, 1941. Republished July 6.

Saws. Ohlen-Bishop Manufacturing Company. 410,219, Nov. 14, 1944. Republished July 6.

Saws. Ohlen-Bishop Manufacturing Company. 411,236. Jan. 9, 1945. Republished July 6.

Sewing machine. Union Special Machine Company. 243,570, renewed June 26, 1948. O. G. July 6.

Sewing machine parts and attachments. Willcox & Gibbs Sewing Machine Company. 439,530, July 6; Serial No. 504,523, published Apr. 13, 1948.

Sewing machines. Willcox & Gibbs Sewing Machine Company. 439,529, July 6; Serial No. 504,522, published Apr. 13, 1948.

Soldering irons; linemen's tools and materials. Graybar Electric Company, Inc. 240,944, renewed Apr. 10, 1948. O. G. July 6.

Soldering irons; linemen's tools and materials. Graybar Electric Company, Inc. 241,570, renewed May 1, 1948. O. G. July 6.

Soldering irons; linemen's tools and materials. Graybar Electric Company, Inc. 241,572, renewed May 1, 1948. O. G. July 6.

Stitcher for attaching to sewing machines for the purpose of changing the stitching mechanism, Reverse. L. Seaman. 439,603, July 6; Serial No. 520,189, published Apr. 6, 1948.

Tapping machines for water and gas mains. H. Mueller Manufacturing Company. 68,337, re-renewed Mar. 31, 1948. O. G. July 6.

Taps, thread-cutting dies, screw and bolt-heading dies, etc. Hy-Pro Tool Co., Inc. 399,496, Jan. 12, 1943. Republished July 6.

Tools, Calking. H. Mueller Manufacturing Company. 68,335, re-renewed Mar. 31, 1948. O. G. July 6.

Tools, Pneumatic. Aro Equipment Corporation. 374,249, Jan. 2, 1940. Republished July 6.

Trucks and portable elevators, Lift. Barrett-Cravens Company. 206,624, renewed Jan. 5, 1948. O. G. July 6.

CLASS 24

Appliances, Identification. American Laundry Machinery Company. 390,919, Oct. 14, 1941. Republished July 6.

Dry-cleaning plants or systems. American Laundry Machinery Company. 275,594, Sept. 23, 1930. Republished July 6.

Drying machines. American Laundry Machinery Company. 274,725, Sept. 2, 1930. Republished July 6.

Drying machines. American Laundry Machinery Company. 370,781, Sept. 5, 1939. Republished July 6.

Drying machines. American Laundry Machinery Company. 390,176, Sept. 9, 1941. Republished July 6.

Drying machines, etc. American Laundry Machinery Company. 370,748, Sept. 5, 1939. Republished July 6.

Extractors for removing moisture or cleaning fluids from fabrics, clothing. American Laundry Machinery Company. 270,575, May 6, 1930. Republished July 6.

Ironing machines, Electric. Graybar Electric Company, Inc. 240,917–8, renewed Apr. 10, 1948. O. G. July 6.

Pressing machines. American Laundry Machinery Company. 332,582, Feb. 18, 1936. Republished July 6.

Pressing machines. American Laundry Machinery Company. 356,490, Apr. 26, 1938. Republished July 6.

Washing machines, Laundry. American Laundry Machinery Company. 219,749, Oct. 26, 1926. Republished July 6.

Washing machines, Laundry. American Laundry Machinery Company. 253,131, Feb. 19, 1929. Republished July 6.

CLASS 25

Bolts and fasteners, Latches, door and window. McKinney Manufacturing Company. 255,101, Apr. 16, 1929. Republished July 6.

Locks. Wilson, Bohannan, Inc. 144,175–6, June 28, 1921. Republished July 6.

CLASS 26

Ammeters, current meters, voltammeters, etc. Graybar Electric Company, Inc. 240,945, renewed Apr. 10, 1948. O. G. July 6.

Ammeters, current meters, voltammeters, etc. Graybar Electric Company, Inc. 240,946–7, renewed Apr. 10, 1948. O. G. July 6.

Automatic machine for weighing and sacking free-flowing merchandise. Tru-Weight Manufacturing Company. 439,655, July 6; Serial No. 513,955.

Brackets for synchronizers. Kalart Company Inc 439,596, July 6; Serial No. 518,463, published Apr. 6, 1948.

Controls and control systems, Electric. Mercoid Corporation. 332,143, Feb. 4, 1936. Republished July 6.

Controls for gas hot water heaters, etc., Electric. G. T. Kopp. 439,532, July 6; Serial No. 504,849, published Mar. 30, 1948.

Film, Sensitized photographic. G. G. Waltz. 439,651, July 6; Serial No. 507,445.

Gages, Bore. Standard Gage Company, Inc. 421,199, May 21, 1946. Republished July 6.

Gauges, Pressure. Certified Gauge & Instrument Corp. 416,540, Sept. 18, 1945. Republished July 6.

Hydrometer; automobile thermostats; pneumatic tire gauges; etc., Storage battery. Sun Oil Company 439,634, July 6; Serial No. 525,423, published Apr. 6.

India-rubber, ink-erasers, pencil erasers. L. & C. Hardtmuth. 31,572, re-renewed May 24, 1948. O. G. July 6.

Indicators, Dial. Standard Gage Company, Inc. 416,404, Sept. 11, 1945. Republished July 6.

Instruments, and scientific instruments, Philosophical. Thermex S. A. 236,120, renewed Feb. 21, 1948. O. G. July 6.

Instruments for measuring and controlling temperature, pressure, etc. Taylor Instrument Companies. 439,573, July 6; Serial No. 514,857, published Mar. 30, 1948.

Instruments for measuring capillary fragility. Rexall Drug Company. 439,610, July 6; Serial No. 521,467, published Mar. 30, 1948.

Lenses, Eye glass and spectacle. E. W. Laisne. 439,644, July 6; Serial No. 495,889.

Measuring and dispensing apparatus. S. F. Bowser & Company, Incorporated. 391,051, Oct. 21, 1941. Republished July 6.

Markestein, John, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich. Locomotive body. 150,152, July 6.
Markestein, John, North Riverside, Ill., assignor to General Motors Corporation, Detroit, Mich. Locomotive body. 150,153, July 6.
Meagher, Fred L., Syosset, N. Y., assignor to Mills Industries, Incorporated, Chicago, Ill. Machine for vending cigarettes or the like. 150,154, July 6.
Mills Industries, Incorporated, assignee: *See*—
Meagher, Fred L.
Mont, James, New York, N. Y. Table. 150,155, July 6.
Moore, William A.: *See*—
Hawkins, Douglas F., and Moore.
Morrow, John B.: *See*—
Mandolf, Henry I., and Morrow.
Neil, Milton C., Los Angeles, Calif. Combination tool. 150,156, July 6.
O'Connell, Daniel C., assignor to Sterno, Inc., New York, N. Y. Chafing dish. 150,157, July 6.
Papitto, Gene: *See*—
Lolli, John, and Papitto.
Patent License Corporation, assignee: *See*—
Arenberg, Albert L., and Zimmerman.
Phillips, Harry, assignor to State Welding Works, Inc., New York, N. Y. Grill guard for automobile radiators. 150,158, July 6.
Reynolds, Philip, Forest Hills, N. Y. Ash tray. 150,159, July 6.
Robson, Fay W.: *See*—
Wiechmann, Bertè A., and Robson.
Salsbury, Hubert I., Los Angeles, Calif. Container for adhesive tape or the like. 150,160, July 6.
Sanmori, Roger L. J.-B., Monaco, Monaco. Motor car. 150,161, July 6.
Scaman, Howard, Chicago, Ill. Display device. 150,162, July 6.
Singleton, Lester D., Rutland, Vt., assignor to The Howe Scale Company. Scale indicator. 150,163, July 6.
Skaredoff, Nikolai N., New York, N. Y. Flatiron cradle. 150,164, July 6.
Sklar, George, Philadelphia, Pa. Tablecloth or similar article. 150,165, July 6.
Smith, A. L., Iron Company, assignee: *See*—
Kruger, Michael H.
Smokador Manufacturing Co., Inc., assignee: *See*—
Mankki, Onnie.
Spray Process Co., Inc., assignee: *See*—
Vose, Edwin W.
Staab, George J., Springfield, N. J. Scissors. 150,166, July 6.
Staab, George J., Springfield, N. J. Scissors. 150,167, July 6.
State Welding Works, Inc., assignee: *See*—
Phillips, Harry.
Sterno, Inc., assignee: *See*—
O'Connell, Daniel C.
Stier, Joseph B., New York, N. Y. Ash tray. 150,168, July 6.
Stockton, Charles E., Manteca, Calif. Match box holder. 150,169, July 6.
Taselaar, Henry J., assignor to American Seating Company, Grand Rapids, Mich. Pulpit. 150,170, July 6.
Taselaar, Henry J., assignor to American Seating Company, Grand Rapids, Mich. Pulpit. 150,171, July 6.
Taselaar, Henry J., assignor to American Seating Company, Grand Rapids, Mich. Pulpit. 150,172, July 6.
Taselaar, Henry J., assignor to American Seating Company, Grand Rapids, Mich. Pulpit. 150,173, July 6.
Taselaar, Henry J., assignor to American Seating Company, Grand Rapids, Mich. Pulpit. 150,174, July 6.
Thomas, Haywood, New York, N. Y. Cigarette rack. 150,175, July 6.
Twayne Cosmetic Co., assignee: *See*—
Jackson, Walter S.
Vincent-McCall Company, The, assignee: *See*—
Vincent, William W., Jr.
Vincent, William W., Jr., assignor to The Vincent-McCall Company, Kenosha, Wis. Chaise longue. 150,176, July 6.
Vose, Edwin W., Orange, N. J., assignor to Spray Process Co., Inc. Motor driven blower for cleaning, drying, and spraying purposes. 150,177, July 6.
Walters, John N., New York, N. Y. Bedroom slipper or similar article. 150,178, July 6.
Walters, Pauline B., Los Angeles, Calif. Cigarette humidor or the like. 150,179, July 6.
Weaver, Burnley, Asheville, N. C. Target. 150,180, July 6.
Westinghouse Electric Corporation, assignee: *See*—
Guild, Lurelle.
Whittaker, Wm. R., Co., Ltd., assignee: *See*—
Hawkins, Douglas F., and Moore.
Wibault, Michel, New York, N. Y. Airplane. 150,181, July 6.
Wiechmann, Bertè A., and F. W. Robson, Portland, Oreg., assignors to Jantzen Knitting Mills. Sweater. 150,182, July 6.
Wiechmann, Bertè A., and F. W. Robson, Portland, Oreg., assignors to Jantzen Knitting Mills. Sweater. 150,183, July 6.
Wiechmann, Bertè A., and F. W. Robson, Portland, Oreg., assignors to Jantzen Knitting Mills. Sweater. 150,184, July 6.
Wraslowsky, Arno, New York, N. Y. Combined earring and barrette. 150,185, July 6.
Young, Arthur M., Buffalo, assignor to Bell Aircraft Corporation, Wheatfield, N. Y. Helicopter. 150,186, July 6.
Younger, Dwen R., San Francisco, Calif. Airplane hangar. 150,187, July 6.
Younger, Dwen R., San Francisco, Calif. Airplane hangar. 150,188, July 6.
Zimmerman, Edward C.: *See*—
Arenberg, Albert L., and Zimmerman.
Zurlinden, Cyril P., Rocky River, Ohio. Hair trimmer. 150,189, July 6.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 6TH DAY OF JULY, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Aab, William, New Ulm, Minn. Cord supporting device. 2,444,800, July 6.
Abraham, Herbert, assignor to The Ruberoid Co., New York, N. Y. Shingle. 2,444,623, July 6.
Aitcheson, Thomas G., Kenmore, N. Y., assignor to American Optical Company, Southbridge, Mass. Control knob and associated structure. 2,444,485, July 6.
Alexander, Paul, Berkhamsted, England. Process and apparatus for depositing metals on a support by thermal evaporation in a vacuum. 2,444,763, July 6.
Albeit, Henry A., Milton, Mass. Ice-cream cutting and discharging device. 2,444,486, July 6.
Allen, Frank B., Verona, assignor to C-O-Two Fire Equipment Company, Newark, N. J. Inflation. 2,444,717, July 6.
Allen, Frank M., Azusa, and C. B. Taylor, Long Beach, assignors to The All-Flex Corporation, Los Angeles, Calif. Flexible pipe coupling with fluid-supported packing. 2,444,868, July 6.
All-Flex Corporation, The, assignee: *See*—
Allen, Frank M., and Taylor.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Ferguson, Rector C.
Almendinger, Charles E., and E. L. Behrens, Prospect, Ohio. Burial vault transporting and lowering apparatus. 2,444,690, July 6.
American Arch Company, Inc., assignee: *See*—
Hasen, Frank D.
American Brace, assignee: *See*—
Markkula, Raymond F.
American Can Company, assignee: *See*—
Nordquist, Ronald E. J.
Peters, John F.
American Car and Foundry Company, assignee: *See*—
Dietrichson, William F., and Christiansen.
American Chicle Company, assignee: *See*—
Cohoe, Wallace P.
American Cyanamid Company, assignee: *See*—
Blann, William A.
Day, Harold M., and Jayne.
American Geographical Society of New York, assignee: *See*—
Edison, Theodore M.
American Optical Company, assignee: *See*—
Aitcheson, Thomas G.
American Steel and Wire Company, The, assignee: *See*—
Elder, Flint C.
Amon, William F., Jr.: *See*—
Blout, Elkan R., and Amon.
Anderson, Clare, Kisneion, N. J. Electrical bridge and galvanometer circuits. 2,444,624, July 6.
Anderson, Eric M., Westbrook, B. O. Kelso, and C. M. Glan, Portland, Maine, assignors to Utilities Distributors, Inc. Fluid coupling. 2,444,414, July 6.
Anderson, John M., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Polynomial equation computer. 2,444,549, July 6.
Anderson, Karl V.: *See*—
Grieshaber, Emil, and Anderson.
Arma Corporation, assignee: *See*—
Cunningham, Frederick W.
Armstrong Cork Company, assignee: *See*—
Powers, Paul O.
Aronson, Peter B., Pelham, N. Y., assignor to Union Carbide and Carbon Corporation. Blowpipe nozzle. 2,444,487, July 6.
Arundale, Erving, Westfield, N. J., assignor to Standard Oil Development Company. Creaming of synthetic rubber latices. 2,444,801, July 6.
Aschemeier, Bradley F., Plant City, Fla. Tooth paste and brush case. 2,444,488, July 6.
Ashton, Benjamin N., assignor to Electrol Incorporated, Kingston, N. Y. Hydraulic power pack unit. 2,444,550, July 6.
Atomic Energy Commission, United States of America, as represented by the, assignee: *See*—
McCombie, Horace R., and Wilder.
Attorney General of the United States: *See*—
Carrier, Marcel.
Auten, Robert W., Jenkintown, and J. L. Rainey, Abington, assignors to The Resinous Products & Chemical Company, Philadelphia, Pa. Nitrogenous resins containing alkylene sulfonate groups. 2,444,802, July 6.
Baldwood, Robert B., assignor of one-half to B. N. Spencer, Jr., Dallas, Tex. Safety gas cock. 2,444,889, July 6.
Baker, Chester A., Glen Ridge, N. J., assignor to Baker Ice Machine Company, Incorporated, Omaha, Nebr. Apparatus for freezing and storing foods. 2,444,489, July 6.
Baker & Company, Incorporated, assignee: *See*—
Shrein, Louis L.
Baker, Erwin G., Indianapolis, Ind. Heat engine. 2,444,764, July 6.
Baker Ice Machine Company, Incorporated, assignee: *See*—
Baker, Chester A.
Barford, Norman C.: *See*—
Pearce, Albert F., and Barford.
Barnes Motor Developments Company, assignee: *See*—
Barnes, William B.
Barnes, William B., assignor to Barnes Motor Developments Company, Muncie, Ind., a partnership consisting of W. B. and F. A. Barnes. Change-speed mechanism. 2,444,691, July 6.
Bassinger, Ross, and O. A. Wright, Houston, Tex.; said Bassinger assignor to said Wright. Drying method. 2,444,588, July 6.
Bath, Cyril J., Chagrin Falls, assignor to The Cyril Bath Company, Cleveland, Ohio. Contour forming machine having a pivoted bender with metal-blank attached. 2,444,718, July 6.
Bath, Cyril J., Cleveland, Ohio. Method and apparatus for contouring elongated metal stock while under tension. 2,444,719, July 6.
Batten, Percy H., assignee, trustee, et al.: *See*—
Lysholm, Alf.
Baner, Oliver F., East Rochester, assignor to Gleason Works, Rochester, N. Y. Gear-cutting machine. 2,444,551, July 6.
Bauer, Oscar W.: *See*—
Teter, John W., and Bauer.
Baumgardner, Earl J., Marion, Iowa, assignor to H. A. Douglas Mfg. Co., Bronson, Mich. Coupling. 2,444,888, July 6.
Beall, Benjamin S.: *See*—
Boisseau, Alexander C., and Beall.
Bean, Frederic R., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic developer containing disodium salts of monohydric phenol monoacids. 2,444,803, July 6.
Beauty Research, Incorporated, assignee: *See*—
Watkins, Thomas W.
Beeson, Coleman A., Baltimore, Md. Emergency electrical generating unit. 2,444,415, July 6.
Behrens, Edward L.: *See*—
Almendinger, Charles E., and Behrens.
Bell Aircraft Corporation, assignee: *See*—
Trotter, John C.
Bell, James A., Fetcham, Leatherhead, England, assignor to Shell Development Company, San Francisco, Calif. Manufacture of lithium base greases. 2,444,720, July 6.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Fiek, James B.
Kennenberg, Walter F.
Bellgruda Aktiebolag, assignee: *See*—
Johnsson, John.
Bellinger, George B., Chicago, Ill. Safety gas burner. 2,444,490, July 6.
Bendix Aviation Corporation, assignee: *See*—
Bevins, James E.
Bergman, Eugene E., Red Bank, N. J. Control means for maintaining constant temperature of liquids. 2,444,416, July 6.
Berkley, Carl: *See*—
Feldt, Rudolf, and Berkley.
Berry, Clifton V., New Haven, Conn. Clothes washing implement. 2,444,491, July 6.
Bevins, James E., Hackensack, assignor to Bendix Aviation Corporation, Bendix, N. J. Rate of turn indicator. 2,444,625, July 6.
Beyerstedt, Ralph L., assignor to The Frank G. Hough Co., Libertyville, Ill. Tractor shovel. 2,444,892, July 6.
Bierman, Howard R., United States Navy. Oxygen mask. 2,444,417, July 6.
Bixby, Willard F., Cleveland, Ohio, assignor to The B. F. Goodrich Company New York, N Y. Method and apparatus for continuously transforming a dispersion of a rubbery material into a sheet. 2,444,626, July 6.
Blaisdell, Harold L., Little Rock, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Wave-signal translating system. 2,444,721, July 6.
Blann, William A. Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Purification of organic nitriles. 2,444,589, July 6.
Blaw-Knox Company, assignee: *See*—
Smith, Allen S.

Blout, Elkan R., Cambridge, and W. F. Amon, Jr., Boston, assignors to Polaroid Corporation, Cambridge, Mass. Infrared radiation filter. 2,444,492, July 6.

Begoslowsky, Boris, Jackson Heights, N. Y. End closures for tubular containers. 2,444,722, July 6.

Boisseau, Alexander C., Lansdowne, and B. S. Beall, Upper Darby, Pa., assignors to General Electric Company. Electric circuit breaker. 2,444,765, July 6.

Bokeny, Geza J., assignor to The Brush Development Company, Cleveland, Ohio. Crystal plate and fabricating same. 2,444,590, July 6.

Bondley, Ralph J., Scotia, N. Y., assignor to General Electric Company. High-frequency electronic device. 2,444,418, July 6.

Bondley, Ralph J., Scotia, N. Y., assignor to General Electric Company. Magnetron. 2,444,419, July 6.

Borkland, Gustave W., Marion, Ind. Drawing and tempering plastic material. 2,444,420, July 6.

Bostock, Ian, Stafford, England. Making shoes with a wedge heel and stiffener. 2,444,493, July 6.

Boston, John P., United States Navy. Temperature measuring system with maximum or minimum selector. 2,444,421, July 6.

Bowen, Everette F., Cedar Rapids, Iowa, assignor to Eastman Kodak Company, Rochester, N. Y. Means for illuminating and trimming paper. 2,444,723, July 6.

Bradford, Victor H., Upper Montclair, assignor to Specialties Development Corporation, Bloomfield, N. J. Producing aluminum-coated iron or steel. 2,444,422, July 6.

Brantingson, Sigurd, Maplewood, N. J., assignor of one-half to B. Martinuzzi, New York, N. Y. Push button. 2,444,552, July 6.

Braun, Ralph L. P., Ann Arbor, and S. Urbant, Inkster, Mich. Electrical heater for liquid-cooled engines. 2,444,627, July 6.

Braunsdorff, Reginald K., East Orange, assignor to Tung-Sol Lamp Works, Inc., Newark, N. J. Incandescent lamp and the like. 2,444,423, July 6.

Breese Burners, Inc., assignee: *See*—
Breese, James L.

Breese, James L., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Hydroxylating pot type hydrocarbon burner. 2,444,494, July 6.

Briggs Filtration Company, The, assignee: *See*—
Briggs, Southwick W., and Porter.
Porter, Roscoe C.

Briggs, Southwick W., Washington, D. C., and R. C. Porter, Arlington, Va., assignor to The Briggs Filtration Company, Bethesda, Md. Internal-combustion engine. 2,444,628, July 6.

Bristol Company, The, assignee: *See*—
Bussey, William H.
Chase, Alvin.

Bromberg, Benjamin, Berkeley, Calif. Placer mining. 2,444,629, July 6.

Brown, Robinson W., Oklahoma City, Okla., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Bearing for rock bits. 2,444,724, July 6.

Brown, Thomas W., Framingham, assignor to Lombard Governor Corporation, Ashland, Mass. Combined tachometer and accelerometer. 2,444,630, July 6.

Brown, William A., Mount Lebanon, Pa., and F. S. Kleeman, Lakewood, Ohio, assignors to The Carborundum Company, Niagara Falls, N. Y. Steel metallurgy. 2,444,424, July 6.

Brull, Eugene C., Forest Park, Ill., deceased; E. E. Brull, administrator. Cream whipper. 2,444,897, July 6.

Brull, Eugene E., administrator: *See*—
Brull, Eugene C.

Brush Development Company, The, assignee: *See*—
Bokeny, Geza J.
Williams, Alfred L. W., and Christian.

Bryant Heater Company, assignee: *See*—
Higley, Frank R.

Buchi, Alfred, assignee: *See*—
Fullemann, Johann.

Bunting Glider Company, assignee: *See*—
Goldberg, Aaron S.

Burlington Mills Corporation, assignee: *See*—
Lathan, James R., and Comer.

Burnham, John, Williamstown, assignor to Sprague Electric Company, North Adams, Mass. Electrolytic condenser. 2,444,725, July 6.

Burroughs Adding Machine Company, assignee: *See*—
Fettig, Arthur J.

Bush, Paine L., Dallas, Tex. Unitary clamp for frictionally held multiple surfaces. 2,444,727, July 6.

Busignies, Henri, G., Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Antenna array. 2,444,425, July 6.

Busignies, Henri G., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Repeater control system. 2,444,426, July 6.

Busignies, Henri G., Forest Hills, and L. A. de Rosa, West Brighton, Staten Island, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Gas filled tube. 2,444,427, July 6.

Bussey, William H., Chicago, Ill., assignor to The Bristol Company, Waterbury, Conn. Method and apparatus for determining the magnitude of a condition. 2,444,726, July 6.

Butsch, Paul V.: *See*—
Clayton, William J., and Butsch.

Butterfield, Melvin D., Wichita, Kans. Tire recapping machine. 2,444,896, July 6.

C-O-Two Fire Equipment Company, assignee: *See*—
Allen, Frank B.

Campbell, Howard: *See*—
Mann, Arthur S., and Campbell.

Carborundum Company, The, assignee: *See*—
Brown, William A., and Kleeman.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Marburg, Edgar.
Reichenbach, Albert T.

Carrier, Marcel, Sillans, France; vested in the Attorney General of the United States. Shoe for sports and the like. 2,444,428, July 6.

Carruthers, Earl C., Providence, R. I. Coin packaging device. 2,444,804, July 6.

Castoe, Floyd H., Dallas, Tex. Spot removing machine. 2,444,728, July 6.

Celanese Corporation of America, assignee: *See*—
Seymour, George W., and Fortess.

Chace, Thomas B., assignor to The Dole Valve Company, Chicago, Ill. Mixer valve and control. 2,444,631, July 6.

Chase, Alvin, assignor to The Bristol Company, Waterbury, Conn. Tappet-actuating member. 2,444,495, July 6.

Chenault, Odie W., assignee: *See*—
Samuels, Joseph Y.

Chicago Pneumatic Tool Company, assignee: *See*—
Brown, Robinson W.

Chick, Foster D., Kenosha, Wis. Lock for holding table legs. 2,444,632, July 6.

Christian, Dean R.: *See*—
Williams, Alfred L. W., and Christian.

Christian, Rodney E., Royal Oak, and A. W. Widerstedt, Detroit, Mich., assignors to Kerr Manufacturing Co. Furnace. 2,444,805, July 6.

Christiansen, Christian, Swampscott, assignor to Rotary Machine Company, Inc., Lynn, Mass. Box sealing machine. 2,444,496, July 6.

Christiansen, John: *See*—
Dietrichson, William F., and Christiansen.

Clark, Frank M., Pittsfield, Mass., assignor to General Electric Company. Method of preparing insulating and dielectric materials. 2,444,766, July 6.

Clark, Robert H.: *See*—
Helmbach, Newton, and Clark.
Wilson, Harry C.

Clarke, John D., Downers Grove, assignor to Morris Paper Mills, Chicago, Ill. Hollow-walled carton structure. 2,444,497, July 6.

Clayton, William J., Mishawaka, and P. V. Butsch, South Bend, Ind., assignors to United States Rubber Company, New York, N. Y. Manufacture of sponge rubber. 2,444,869, July 6.

Cleasby, Ann D., Eau Claire, Wis. Shoulder strap combination for brassières and foundation garments. 2,444,806, July 6.

Cleeton, Claud E., Washington, D. C. Pulse type telegraph transmitter and receiver. 2,444,429, July 6.

Cleveland Trust Company, The, executor, et al.: *See*—
Deibel, Cyril P.

Clifford, Albert M., Stow, assignor to Wingfoot Corporation, Akron, Ohio. Copolymers of vinyl furane and alpha-alkyl acrylonitrile. 2,444,807, July 6.

Clifford, Albert M., Stow, assignor to Wingfoot Corporation, Akron, Ohio. Copolymers of butadienes-1,3 and alpha aryl acrylonitriles. 2,444,870, July 6.

Coats, Gilbert E., Fort Dodge, Iowa. Dump vehicle. 2,444,808, July 6.

Cobean, Richard W., Schenectady, N. Y., assignor to General Electric Company. Gas-arc welding apparatus. 2,444,767, July 6.

Cochran, Clarence W., Belmont, assignor to Polaroid Corporation, Cambridge, Mass. Goggle with detachable lens. 2,444,498, July 6.

Cocup, George A.: *See*—
Goodbar, Mayo A., and Cocup.

Coboc, Wallace P., New York, assignor to American Chicle Company, Long Island City, N. Y. Chewing gum base. 2,444,871, July 6.

Colborne Manufacturing Company, assignee: *See*—
Smith, Dennis W.

Coleman, Lester L.: *See*—
Hall, Horace E., and Coleman.

Collins Radio Company, assignee: *See*—
May, Richard W.

Comer, Marvin H.: *See*—
Lathan, James R., and Comer.

Comstock, Charles F., Hagerstown, Md. Aircraft load calculator. 2,444,693, July 6.

Cone, Richard R., assignor to Threads, Incorporated, Gastonia, N. C. Singeing apparatus and method. 2,444,553, July 6.

Continental Can Company, Inc., assignee: *See*—
Coyle, John.

Continental Oil Company, assignee: *See*—
Jones, Harry R.

Coons, Curtis C., assignor to The Hoover Company, North Canton, Ohio. Absorption type portable air conditioning unit. 2,444,694, July 6.

Corey, Flournoy, assignee: *See*—
Drews, Harry E.

Corning Glass Works, assignee: *See*—
Daudt, William H.
Speier, John L.

Cossey, Frank: *See*—
Marks, Graham W., Cossey, and Mills.

Coyle, John, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y. Easy opening metal container. 2,444,501, July 6.

Crammer, George H., Philadelphia, Pa., assignor to Electrolux Corporation, New York, N. Y. Reverse flow cleaner. 2,444,809, July 6.

Crane, Carl J.: *See*—
Stout, Raymond K., Muller, Crane, and Holloman.

Crane Packing Company, assignee: *See*—
Hastings, Shirrel A., and Voytech.
Sohrl, Archie J.
Voytech, Charles F.

Creary, Luther P., Catawissa, Pa. Sliding game piece. 2,444,810, July 6.

Creson, William K., assignor to Ross Gear & Tool Co., Lafayette, Ind. Reverse brake. 2,444,592, July 6.

Crites, Nelson A., Columbus, Ohio. Playhouse. 2,444,695, July 6.

Crockett, Frank L., Tenants Harbor, Maine, assignor to Whitin Machine Works, Whitinsville, Mass. Detaching system. 2,444,554, July 6.

Crockwell, Douglass, Glens Falls, N. Y. Method of producing animated motion pictures. 2,444,720, July 6.

Crom, John M., Washington, D. C. Grout projecting apparatus. 2,444,811, July 6.

Crossley, Arthur, Bolton, England. Obturator for ordnance. 2,444,633, July 6.

Crowley, John A., Jr., Scarsdale, N. Y., and W. D. Macgeorge, Drexel Hill, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Conveyer chain. 2,444,812, July 6.

Crown Can Company, assignee: *See*—
Fromer, Walter C.

Croxall, Willard J.: *See*—
Kroeker, Edwin H., and Croxall.

Cummings, Lowell O., and H. A. Vogel, Milwaukee, Wis., assignors to Pittsburgh Plate Glass Company. Solvent fractionation of tall oil. 2,444,730, July 6.

Cunningham, Frederick W., Stamford, Conn., assignor to Arma Corporation, Brooklyn, N. Y. Servo control system. 2,444,813, July 6.

Curtis, Roger C.: *See*—
Roberts, Frederick W., and Curtis.

Cyril Bath Company, The, assignee: *See*—
Bath, Cyril J.

Dadson Enterprises, Inc., assignee: *See*—
Tornberg, Isidor.

Daniel, Elias I., Los Angeles, Calif. Hand operated nut cracker with reciprocating jaw. 2,444,634, July 6.

Daudt, William H., assignor to Corning Glass Works, Corning, N. Y. Heat transfer media. 2,444,555, July 6.

Davis, Russell E., St. Louis, Mo., assignor to Hussmann Refrigerator Co. Automatic temperature control for refrigerated open-top display cases. 2,444,593, July 6.

Day, Harold M., Cos Cob, and D. W. Jayne, Jr., Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Isopropylidene-*p*-phenoxy-2-ethanol-*p*-phenoxyacetic acid. 2,444,594, July 6.

Deibel, Cyril P., deceased, by M. T. Deibel, Lakewood, and The Cleveland Trust Company, Cleveland, Ohio, co-executors, assignors to General Dry Batteries, Inc. Sealed dry cell with threaded end. 2,444,872, July 6.

Deibel, Marion T., executor, et al.: *See*—
Deibel, Cyril P.

De la Riestra, Juan C. and M. A., and W. F. Nixon, Rosario, Argentina. Rotary valve for internal-combustion engines. 2,444,696, July 6.

De la Riestra, Martin A.: *See*—
De la Riestra, Juan C. and M. A., and Nixon.

Denmark, Hyman S., assignor to Federal Telephone & Radio Corporation, New York, N. Y. Metal rectifier element. 2,444,430, July 6.

Dennis, Thomas H., Jr., Tarrytown-on-Hudson, N. Y. Truck warning device. 2,444,635, July 6.

Derbyshire Machine & Tool Company, assignee: *See*—
Reinhardt, Albrecht E.

De Rosa, Louis A.: *See*—
Busignies, Henri G., and de Rosa.

Devol, Manson L., Wilkinsburg, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Rolling of glass to form sheets. 2,444,731, July 6.

Dickerson, Leary, Jamaica, Va. Oyster punching machine. 2,444,636, July 6.

Dictaphone Corporation, assignee: *See*—
Roberts, Frederick W., and Curtis.

Dietrichson, William F., and J. Christiansen, Berwick, Pa., assignors to American Car and Foundry Company, New York, N. Y. Plate metal sill brace and draft gear stop. 2,444,637, July 6.

Dobbins, Albert L., Kansas City, Mo. Teeth cleaning device. 2,444,638, July 6.

Doerr, Keith: *See*—
Doerr, Raymond S. and K.

Doerr, Raymond S. and K., assignors to H. B. Sherman Manufacturing Co., Battle Creek, Mich. Washer assembly unit. 2,444,595, July 6.

Dole Valve Company, The, assignee: *See*—
Chace, Thomas B.
Rosenblum, Robert A.

Doucette, John J., Malden, Mass. Reversible pipe bender with detachable side abutment member. 2,444,596, July 6.

Douglas Aircraft Company, Inc., assignee: *See*—
Rechton, George D., Ward, and Watson.

Douglas, H. A., Mfg. Co., assignee: *See*—
Baumgardner, Earl J.
Kelly, George M.

Dowless, William B., Abbottsburg, N. C. Oil burner for tobacco drying and curing means. 2,444,814, July 6.

Drews, Harry E., Ottumwa, assignor of one-half to Flournoy Corey, Cedar Rapids, Iowa. Plucking poultry. 2,444,556, July 6.

Dubin, Lester: *See*—
Grieg, Donald D., Frum, and Dubin.

Dubin, Lester, Brooklyn, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Radio beacon transmitter. 2,444,431, July 6.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Feldt, Rudolf, and Berkley.
Leet, Harold A., and Sectish.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Pavlic, Albert A.
Searle, Norman R.
Signaigo, Frank K.
Walsh, Robert H.

Durant Manufacturing Co., assignee: *See*—
Hennessy, Mark M., and Lawrence.
Lawrence, Harold J., and Henenssy.

E. Z. Paintr Corporation, assignee: *See*—
Touchett, Lawrence P.

Eastman Kodak Company, assignee: *See*—
Bean, Frederic R.
Bowen, Everette F.
Fitch, Harold L.
Hagemeyer, Hugh J., Jr.
Yule, John A. C.

Eaton, Edwin D., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Propeller anti-icer. 2,444,557, July 6.

Eby, Herbert O., Pittsburgh, Pa. Educational game device. 2,444,768, July 6.

Eckert, William F., Rochelle, Ill. Two-way roller guide. 2,444,432, July 6.

Edison, Theodore M., West Orange, N. J., assignor to American Geographical Society of New York, New York, N. Y. Stereoscopic mapping instrument. 2,444,815, July 6.

Elder, Flint C., Cleveland Heights, Ohio, assignor to The American Steel and Wire Company of New Jersey. Projection method for measuring the inner contours of wire drawing dies. 2,444,639, July 6.

Electric & Musical Industries Limited, assignee: *See*—
Pearce, Albert F., and Barford.

Electrol Incorporated, assignee: *See*—
Ashton, Benjamin N.

Electrolux Corporation, assignee: *See*—
Cranmer, George H.

Electromaster, Inc., assignee: *See*—
Scofield, Donald W.

Elkhart Brass Manufacturing Company, Inc., assignee: *See*—
Hansen, Edward H.

Elliott, Artemus E., Pasadena, Calif. Service handle. 2,444,558, July 6.

Elliott, Fred H., Big Rapids, Mich. Heat-conserving air-heating furnace with flue cleaner. 2,444,499, July 6.

Elsman, Joseph M.: *See*—
Meincke, Edward, and Elsman.

Emerson, William S., and V. E. Lucas, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Production of acetophenone. 2,444,816, July 6.

Endless Belt Corporation, assignee: *See*—
Goepfert, Otto F.

Epstein, William H., Brooklyn, N. Y. Blucher type shoe with removable plug. 2,444,640, July 6.

Erb, George H., South Orange, assignor to Federal Telephone and Radio Corporation, Newark, N. J. Electrical connector. 2,444,433, July 6.

Erickson, George W., Rice Lake, Wis. Duck retriever. 2,444,597, July 6.

Escott, William: *See*—
Macpherson, Duncan J., Lefebvre, and Escott.

Eyles, Wilfred C., Bayfield, Colo., and Carl E. Hyatt, East San Diego, Calif. Tile-sawing machine. 2,444,598, July 6.

F. & V. Manufacturing Co, Inc., assignee: *See*—
Vastano, Joseph J.

Farnsworth Research Corporation, assignee: *See*—
Salinger, Hans W. G.

Fay, Robert H., Wilbraham, Mass. Centering device. 2,444,559, July 6.

Federal Telephone and Radio Corporation, assignee: *See*—
Busignies, Henri G.
Busignies, Henri G., and de Rosa.
Denmark, Hyman S.
Dubin, Lester.
Erb, George H.
Grieg, Donald D.
Grieg, Donald D., Frum, and Dubin.
Labin, Emile.
Labin, Emile, and Hoffman.
Master, Warren S.
Skinker, Murray F., Haigh, and Hall.
Stearn, Franklin A.
Wallace, Fred C.
Wing, Arthur K., Jr.

Feenberg, Eugene, New York, N. Y., assignor to The Sperry Corporation. Velocity modulation discharge tube apparatus. 2,444,434, July 6.

Feldt, Rudolf, and C. Berkley, New York, N. Y., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Cathode-ray tube spectrograph. 2,444,500, July 6.

Fergason, Rector C., La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Corn harvester. 2,444,561, July 6.

Ferguson, Leonard D., Wallowa, Oreg. Track brake for kiln cars and the like. 2,444,500, July 6.

Fettig, Arthur J., assignor to Burroughs Adding Machine Company, Detroit, Mich. Adjustable paper stop for business machines. 2,444,641, July 6.

Finken, Walter S.: *See*—
Frieder, Leonard P., and Finken.

Fisher, Albert T., Hartford, Conn. Closure fastener. 2,444,501, July 6.

Fisher, Alec, Lynn, Mass., assignor to General Electric Company. Regulating system for inverted rotary converters. 2,444,769, July 6.

Fisk, James B., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Frequency control of magnetron oscillators. 2,444,435, July 6.

Fitch, Harold L., assignor to Eastman Kodak Company, Rochester, N. Y. Film punch. 2,444,732, July 6.

Fordyce, Reid G., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Process for polymerizing vinyl compounds and products formed thereby. 2,444,817, July 6.

Fortess, Fred: *See*—
Seymour, George W., and Fortess.

Franklin, John L., Atlanta, Ga. Announcing machine and system. 2,444,818, July 6.

Freyre, Daniel V., Buenos Aires, Argentina. Thread-holding pincers for the cleansing of interdental and intermolar spaces. 2,444,697, July 6.

Freysinger, John B., Hamden, assignor to Sargent & Company, New Haven, Conn. Door lock. 2,444,819, July 6.

Freysinger, John B., Hamden, assignor to Sargent & Company, New Haven, Conn. Door lock. 2,444,820, July 6.

Fried, Joseph W., Los Angeles, Calif. Foot control accessory for drill presses. 2,444,502, July 6.

Frieder, Leonard P., Great Neck, Long Island, and W. S. Finken, Brooklyn, N. Y., said Finken assignor to said Frieder. Balloon apparatus and parachute associated therewith. 2,444,642, July 6.

Fromer, Walter C., assignor to Crown Can Company, Philadelphia, Pa. Head spacing apparatus for container closing machines. 2,444,502, July 6.

Frum, Alexander: *See*—
Grieg, Donald D., Frum, and Dubin.

Fryling, Charles F., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Polymerization of butadiene-1,3 hydrocarbons in acidic aqueous emulsion in the presence of a persulfate and aluminum chloride. 2,444,643, July 6.

Füllemann, Johann, Washington, D. C., assignor to Alfred Buchi, Winterthur, Switzerland. Speed responsive regulation of turbosupercharged engines. 2,444,644, July 6.

Furlong, Ralph: *See*—
Mulkey, Stanley A., and Furlong.

Fyler, George W., Stratford, Conn., assignor to General Electric Company. Height computing apparatus. 2,444,770, July 6.

Fyler, George W., Stratford, Conn., assignor to General Electric Company. Height computing apparatus. 2,444,771, July 6.

Gardner-Richardson Company, The, assignee: *See*—
Ringler, William A.

Garvelink, Henry: *See*—
Gerulis, Benedict R., and Garvelink.

Gates Rubber Company, assignee: *See*—
Kennedy, Grosvenor A., and Moore.

Gaudet, Edgar E.: *See*—
Wood, Winchester R., and Gaudet.

Gebauer, Adam H., Short Hills, assignor to Tide Water Associated Oil Company, Bayonne, N. J. Regulating apparatus. 2,444,563, July 6.

Geldhof, Peter E., and L. Ringer, assignors to Nineteen Hundred Corporation, St. Joseph, Mich. Fluid handling system for automatic cleansing apparatus. 2,444,645, July 6.

General Aniline & Film Corporation, assignee: *See*—
Heimbach, Newton.
Heimbach, Newton, and Clark.
Heimbach, Newton, and Kelley.

General Dry Batteries, Inc., assignee: *See*—
Deibel, Cyril P.
Rock, Arthur F.

General Electric Company, assignee: *See*—
Boisseau, Alexander C., and Beall.
Bondley, Ralph J.
Clark, Frank M.
Cobean, Richard W.
Fisher, Alec.
Fyler, George W.
Lord, Harold W.
Meals, Robert N.
Uttal, Joseph A., and Short.
Whalley, Harry, and Shand.
Williams, William D.
Wilson, Wayne E.
Wood, Winchester R., and Gaudet.

General Motors Corporation, assignee: *See*—
Reeves, Donald H.
Storer, Richard M.

Genter, Albert H., Mount Lebanon, Pa. Rail flange clamp. 2,444,599, July 6.

Gerulis, Benedict R., and H. Garvelink, Grand Rapids, Mich. Variable-speed motor. 2,444,821, July 6.

Getaz, James L., New York, N. Y. Reverse plating of knitting fabrics. 2,444,503, July 6.

Gibbes, Ronald E., Weedon, England. Drinking appliance for birds and animals. 2,444,772, July 6.

Giles, Dee, Farmington, N. Mex. Smelting furnace. 2,444,646, July 6.

Gillie, Willis H., St. Paul, and J. V. Sigford, assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Impedance bridge. 2,444,733, July 6.

Gillett, Glenn D., New London, Conn., assignor to the United States of America as represented by the Secretary of the Navy. Backlash eliminator for planetary gears. 2,444,734, July 6.

Ginn, Clarence M.: *See*—
Anderson, Eric M., Kelso, and Ginn.

Gleason Works, assignee: *See*—
Bauer, Oliver F.

Goepfert, Otto F., Brevard, N. C., assignor to Endless Belt Corporation. Braiding machine. 2,444,436, July 6.

Goldberg, Aaron S., assignor to Bunting Glider Company, Philadelphia, Pa. Securing device. 2,444,573, July 6.

Gondek, John T., assignor, by mesne assignments, to The Northern Pump Company, Minneapolis, Minn. Adjustable gearing. 2,444,773, July 6.

Goodbar, Mayo A., and G. A. Cocup, assignor to The National Cash Register Company, Dayton, Ohio. Cash register ticket feeding and printing mechanism. 2,444,564, July 6.

Goodman Manufacturing Company, assignee: *See*—
Hagenbook, Loy D.

Goodrich, B. F., Company, The, assignee: *See*—
Bixby, Willard F.
Fryling, Charles F.
Mathes, Roger A.
Stewart, George R., and Traxler.
Van Buren, Walter H.
Willison, Edward A.

Goss Printing Press Company, The, assignee: *See*—
Whitehead, William A.

Graver Tank & Mfg. Co., Inc., assignee: *See*—
Prager, Frank D.

Gray, George F.: *See*—
Pratt, Verneur E., and Gray.

Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Modulating system. 2,444,437, July 6.

Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Pulse generation method. 2,444,438, July 6.

Grieg, Donald D., Forest Hills, A. Frum, New York, and L. Dubin, Brooklyn, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Beacon receiver means. 2,444,439, July 6.

Grieshaber, Emil, and K. V. Anderson, assignors to Nordberg Manufacturing Company, Milwaukee, Wis. Internal-combustion engine. 2,444,440, July 6.

Griffin, Emma E., New York, N. Y. Bootee. 2,444,822, July 6.

Grimham, Fred, Coral Gables, Fla. Deodorizer for toilet bowls. 2,444,441, July 6.

Grogan, Elmer H., Danville, Ill. Card feeding mechanism. 2,444,504, July 6.

Grogan, Elmer H., Danville, Ill. Contact printing frame for automatic printing machines. 2,444,505, July 6.

Gross, Alfred G., Wilmette, Ill., assignor to The Hoover Company, Canton, Ohio. Two-temperature intermittently operating refrigerator. 2,444,698, July 6.

Haensel, Vladimir: *See*—
Ipatieff, Vladimir N., and Haensel.

Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of monoesters of dicarboxylic acids. 2,444,785, July 6.

Hagenbook, Loy D., assignor to Goodman Manufacturing Company, Chicago, Ill. Self-loading device for shaker conveyers. 2,444,600, July 6.

Hagerbaumer, William A.: *See*—
Johnson, George L., and Hagerbaumer.

Haigh, Leslie B.: *See*—
Skinker, Murray F., Haigh, and Hall.

Hall, Horace R., Lyle, Tenn., and L. L. Coleman, Wilmington, Del., assignors to Masonite Corporation, Laurel, Miss. Recovery of pentoses and hexosans from wood liquors. 2,444,823, July 6.

Hall, Ralph O.: *See*—
Skinker, Murray F., Haigh, and Hall.

Hall, Russell M., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Refrigerant evaporator. 2,444,824, July 6.

Hammer, Charles, Garden City, N. Y. Making container closures. 2,444,506, July 6.

Hansen, Edward H., assignor to Elkhart Brass Manufacturing Company, Inc., Elkhart, Ind. Readily detachable expander in apparatus for attaching couplings to hose. 2,444,601, July 6.

Hanson, Benjamin R., Dayton, assignor to The Sherwin-Williams Company, Cleveland, Ohio. Making predoped fabric. 2,444,507, July 6.

Hanson, Edward, Cleveland, assignor of one-tenth to G. B. Pitts, Cleveland Heights, Ohio. Packing. 2,444,874, July 6.

Happe, Reynold, Pittstown, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Brush assembly for dynamoelectric machines. 2,444,826, July 6.

Hardie, George C., Brooklyn, N. Y. Bolt rethreading apparatus. 2,444,602, July 6.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Jonker, Johan L. H.
Van Der Ziel, Aldert, and Strutt.

Harvey, Leo M., Los Angeles, Calif. Washing machine cylinder and closure means therefor. 2,444,603, July 6.

Hastings, Shirrel A., and C. F. Voytech, assignors to Crane Packing Company, Chicago, Ill. Roll-neck seal. 2,444,609, July 6.

Haveles, Evangel A., Los Angeles, Calif. Combination calendar and memorandum pad holder. 2,444,647, July 6.

Hawkins, Floyd C., Arcadia, Calif. Seat mounting. 2,444,604, July 6.

Hay, Harold R., Bryn Mawr, assignor to Philadelphia Quartz Company, Philadelphia, Pa. Purification of raw waters. 2,444,774, July 6.

Hayes, Elsie A., South Euclid, Ohio. Food preserving. 2,444,875, July 6.

Hazeltine Research, Inc., assignee: *See*—
Bialodiell, Harold L.
Loughlin, Bernard D.

Hazen, Frank D., Pittsburgh, Pa., assignor to American Arch Company, Inc., New York, N. Y. Seal for soaking pit covers. 2,444,786, July 6.

Heath, Herbert P., Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical coil. 2,444,737, July 6.

Hecht, Herman J., South Bend, Ind. Welding electrode holder. 2,444,565, July 6.

Heimbach, Newton, Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Stabilizers for photographic emulsions. 2,444,607, July 6.

Heimbach, Newton, and W. Kelly, Jr., Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Stabilizers for photographic emulsions. 2,444,605, July 6.

Heimbach, Newton, and W. Kelly, Jr., Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Stabilizers for photographic emulsions. 2,444,606, July 6.

Heimbach, Newton, and W. Kelly, Jr., Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Stabilizers for photographic silver-halide emulsions. 2,444,608, July 6.

Heimbach, Newton, and R. H. Clark, Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Stabilizers for photographic silver-halide emulsions. 2,444,609, July 6.

Hempel, Herbert W.: *See*—
Marsh, Walton C., and Hempel.

Hene, Emil, London, England. Treatment of petroleum cracking residues. 2,444,610, July 6.

Hennessy, Mark M.: *See*—
Lawrence, Harold J., and Hennessy.

Hennessy, Mark M., and H. J. Lawrence, assignors to Durant Manufacturing Co., Milwaukee, Wis. Intermittently rotatable electric motor. 2,444,566, July 6.

Herbold, Robert J., assignor to Lafayette M. Hughes, Denver, Colo. Photo-electric apparatus. 2,444,442, July 6.

Hercules Powder Company, assignee: *See*—
Rummelsburg, Alfred L.

Hesselroth, Charles F., Los Angeles, Calif., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Composite flexible moistureproof wrapping tape or sheet. 2,444,448, July 6.

Highley, Frank R., Cleveland Heights, Ohio, assignor to Bryant Heater Company. Heat exchange element. 2,444,826, July 6.

Hillier, James, Cranbury, N. J., assignor to Radio Corporation of America. Operating electron guns. 2,444,700, July 6.

Hite, George, Dorchester, and G. B. Whitham, Wollaston, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy. Self-synchronous frequency divider. 2,444,890, July 6.

Hoe, R., & Co., Inc., assignee: *See*—
Lamatsch, Frederick.

Hoenle, Norman J.: *See*—
Landis, George G., and Hoenle.

Hoffman, Rose B.: *See*—
Labin, Emile, and Hoffman.

Holloman, George V.: *See*—
Stout, Raymond K., Muller, Crane, and Holloman.

Holmes, Louis W., assignor of one-third to A. M. Johnson and one-third to A. A. Rogers, Minneapolis, Minn. Means for covering walls. 2,444,738, July 6.

Home Curtain Corp., assignee: *See*—
Temko, Richard S., and Katz.

Hood, H. P., & Sons, Inc., assignee: *See*—
Symmes, Carleton R.

Hooker Electrochemical Company, assignee: *See*—
Maude, Aylmer H.

Hoover Company, The, assignee: *See*—
Coons, Curtis C.
Gross, Alfred G.

Horni, Paul P., New York, N. Y. Electric heater for flowing fluid. 2,444,508, July 6.

Houck, Jonathan I., Pottstown, Pa. Savings bank. 2,444,611, July 6.

Hough, Frank G., Co., The, assignee: *See*—
Beverstedt, Ralph L.

Howard, Styles T., Jeffersonville, Ind. Portable stove. 2,444,444, July 6.

Huber, J. M., Corporation, assignee: *See*—
McConahey, Theodore D., and Redell.

Hughes, Lafayette M., assignee: *See*—
Herbold, Robert J.

Hughes, Tek, Inc., assignee: *See*—
Johnson, Albin.

Husek, Helen P., Allston, assignor to Polaroid Corporation, Cambridge, Mass. Color photographic process. 2,444,567, July 6.

Hussmann Refrigerator Co., assignee: *See*—
Davis, Russell E.

Hyatt, Carl E.: *See*—
Eyles, Wilfred C., and Hyatt.

Hyler, Lolell L., assignor to La Plant-Choate Manufacturing Company, Incorporated, Cedar Rapids, Iowa. Earth mover. 2,444,612, July 6.

Illinois Tool Works, assignee: *See*—
Poupitch, Ougljesa J.

Ingham, John F., Wilton, Conn. Pipe hanger. 2,444,701, July 6.

Institute of Paper Chemistry, The, assignee: *See*—
Swanson, John W.

Interior, United States of America as represented by the Secretary of, assignee: *See*—
Marks, Graham W., Cossey, and Mills.

International Nickel Company, Inc., The, assignee: *See*—
Kihlgren, Theodore E.

International Paper Box Machine Company, The, assignee: *See*—
La Bombard, Leon E.

Ipatieff, Vladimir N., Chicago, and V. Haensel, Clarendon Hills, assignors to Universal Oil Products Company, Chicago, Ill. Composition of matter. 2,444,509, July 6.

Irrgang, Louis J., Jersey City, N. J. Connector plug. 2,444,739, July 6.

Isbister, Eric J., Garden City, N. Y., assignor to The Sperry Corporation. Radio navigation system. 2,444,445, July 6.

Isserstedt, Siegfried G., Toronto, Ontario, Canada. Toaster. 2,444,510, July 6.

Isserstedt, Siegfried G., Toronto, Ontario, Canada, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electronic control circuit. 2,444,568, July 6.

Jackson, John G., and R. H. Kingdon, assignors to Square D Company, Detroit, Mich. Current distribution duct. 2,444,048, July 6.

Jackson, Robert T., Kansas City, Mo. Booster spring for focal plane shutters. 2,444,446, July 6.

Jacobs, Charles E., Minneapolis, Minn. Trigger safety lock for guns. 2,444,649, July 6.

Jacobsen, Carl, assignee, et al.: *See*—
Neal, Ernest C.

Jacquard Knitting Machine Co., Inc., assignee: *See*—
Miller, Charles F.

Javery, Frank B., assignor to Warp Compressing Machine Company, Worcester, Mass. Warp beam compressor device. 2,444,775, July 6.

Jayne, David W., Jr.: *See*—
Day, Harold M., and Jayne.

Johnson, Albert M., assignee, et al.: *See*—
Holmes, Louis W.

Johnson, Albin, Delmar, N. Y., assignor, by mesne assignments, to Tek Hughes, Inc. Nitromethane-acetone-adipic acid condensation polymer. 2,444,827, July 6.

Johnson, George L., New York, N. Y., and W. A. Hagerbaumer, Westfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Process for cracking hydrocarbons and apparatus therefor. 2,444,650, July 6.

Johnson, Stanley G., West Hartford, Conn. Multiple diameter gauge. 2,444,702, July 6.

Johnsson, John, assignor to Belleruds Aktiebolag, Saffle, Sweden. Bag. 2,444,891, July 6.

Jones, Harry R., assignor to Continental Oil Company, Ponca City, Okla. Valve assembly. 2,444,703, July 6.

Jones, Mack C., Haddon Heights, and L. E. Matson, Jr., Collingswood, N. J., assignors to Radio Corporation of America. Shaping circuit for cathode beam tubes. 2,444,651, July 6.

Jonker, Johan L. H., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electrode structure for multigrid electron discharge tubes. 2,444,740, July 6.

Josselyn, Winsor, U. S. Army, San Francisco, Calif. Hinged handle for utensils. 2,444,447, July 6.

Joyce, Gracia E., Dixon, Ill. Child's sleeping garment. 2,444,652, July 6.

Kalning, Frederick E., Quincy, and R. E. Mathewson, Weymouth, assignors to United Mattress Machinery Co., Inc., Quincy, Mass. Apparatus for handling mattresses. 2,444,776, July 6.

Kannenberg, Walter F., Lyndhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Planetary gear unit. 2,444,448, July 6.

Kaplan, William, Brooklyn, assignor to Sun Chemical Corporation, New York, N. Y. Manufacture of nitriles. 2,444,828, July 6.

Karcher, Harriet G., Snyder, N. Y. Foundation garment. 2,444,829, July 6.

Katcher, Morris, New York, N. Y. Packing cup for master pistons. 2,444,569, July 6.

Kath, Norman A., Davenport, Iowa. Optical filter attachment. 2,444,512, July 6.

Katz, Abraham: *See*—
Temko, Richard S., and Katz.

Kaufmann, Ary, South Orange, assignor to K. Kaufmann & Co., Inc., Newark, N. J. Traveling bag comprising hingedly connected opposed sections. 2,444,511, July 6.

Kaufmann, K., & Co., Inc., assignee: *See*—
Kaufmann, Ary.

Kearny, Cresson H., U. S. Army, Fort Clayton, C. Z. Valve stem. 2,444,449, July 6.

Keefer, Harry P., Youngstown, Ohio. Butter tray. 2,444,704, July 6.

Keffer, Joseph W., Ligonier, Pa. Adjustable shoring support. 2,444,705, July 6.

Kellgren, John A., Regina, Saskatchewan, Canada. Chain tool. 2,444,450, July 6.

Kellgren, Waldo, St. Paul, H. J. Tierney, Mahtomedi, and R. G. Drew, assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Adhesive sheet and making. 2,444,830, July 6.

Kelly, George M., Sturgis, assignor to H. A. Douglas Mfg. Co., Bronson, Mich. Coupling. 2,444,892, July 6.

Kelly, Walter, Jr.: *See*—
Heimbach, Newton, and Kelly.

Kelso, Beecher O.: *See*—
Anderson, Eric M., Kelso, and Ginn.

Kelso, Beecher O., assignor to Utilities Distributors, Inc., Portland, Maine. Flued coupling. 2,444,451, July 6.

Kennedy, Grosvenor A., and C. O. Moore, assignors to Gates Rubber Company, Denver, Colo. Drill pipe cleaner. 2,444,653, July 6.

Kerngood, Allen H., Baltimore, Md. Heel for footwear. 2,444,777, July 6.

Kerr Manufacturing Co., assignee: *See*—
Christian, Rodney E., and Widerstedt.

Kihlgren, Theodore E., Scotch Plains, N. J., assignor to The International Nickel Company, Inc., New York, N. Y. Nickel electrode for welding cast iron. 2,444,654, July 6.

Kilborn, Karl B., assignor to Wingfoot Corporation, Akron, Ohio. Extruding apparatus. 2,444,831, July 6.

Kingdon, Ralph H.: *See*—
Jackson, John G., and Kingdon.

Kleeman, Francis S.: *See*—
Brown, William A., and Kleeman.

Kopee, Walter, assignor to Republic Steel Corporation, Cleveland, Ohio. Apparatus for welding tubing. 2,444,778, July 6.

Kosteiny, Stefan, Chicago, Ill. Antiskid chain securing device. 2,444,513, July 6.

Kozlowski, Walter T., assignee: *See*—
Myers, Barton E.

Krasberg, Rudolf, Chicago, Ill. Bottle cap. 2,444,779, July 6.

Krebs, Robert W., Baton Rouge, La., assignor to Standard Oil Development Company. Removing vaporous reactants from catalyst used in hydrocarbon conversion. 2,444,832, July 6.

Kroeker, Edwin H., Cheltenham, and W. J. Croxall, Bryn Athyn, assignors to Röhm & Haas Company, Philadelphia, Pa. Abrasion-resistant polymers and preparing same. 2,444,655, July 6.

Kubaugh, Benjamin F., assignor to Henry Vogt Machine Co. Inc., Louisville, Ky. Tube-ice machine using compressor to reverse pressure. 2,444,514, July 6.

Kuhl, Gerald L., Chester, Minn. Hitch or clevis. 2,444,876, July 6.

Labin, Emile, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Obstacle detection and communicating system. 2,444,452, July 6.

Labin, Emile, New York, N. Y., and R. B. Hoffman, East Orange, assignors to Federal Telephone and Radio Corporation, Newark, N. J. Static reducing pulse receiver. 2,444,455, July 6.

La Bombard, Leon E., assignor to The International Paper Box Machine Company, Nashua, N. H. Carton assembling machine. 2,444,516, July 6.

Lake, George R., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Recovery of methyl ethyl ketone from azeotropic distillates by extraction with tetraethylene glycol. 2,444,893, July 6.

Lamatsch, Frederick, Grantwood, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y. Inking mechanism for printing machines. 2,444,656, July 6.

Lampert, Albert J., Sparrows Point, Md., assignor to Rheem Manufacturing Company, Richmond, Calif. Assembling zinc-lined containers. 2,444,833, July 6.

Landis, George G., South Euclid, and N. J. Hoenie, Cleveland Heights, assignors to The Lincoln Electric Company, Cleveland, Ohio. High-speed arc welding. 2,444,834, July 6.

Lannert, William H.: *See*—
Stahnke, Leslie R., and Lannert.

La Plant-Choate Manufacturing Company, Incorporated, assignee: *See*—
Hyler, Lolell L.

Larson, William B., Glen Ridge, N. J. Binocular mount. 2,444,453, July 6.

Lathan, James R., and M. H. Comer, Burlington, assignors to Burlington Mills Corporation, Greensboro, N. C. Expanding cake holder. 2,444,780, July 6.

Lawrence, Harold J.: *See*—
Hennessy, Mark M., and Lawrence.

Lawrence, Harold J., and M. M. Hennessy, assignors to Durant Manufacturing Co., Milwaukee, Wis. Drive for counter numeral wheels. 2,444,570, July 6.

Leaf, Walter B., Denver, Colo. Evaporator foam control apparatus. 2,444,454, July 6.

Leeds and Northrup Company, assignee: *See*—
Perley, George A.

Leet, Harold A., and C. W. Sectish, assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Apparatus for coating tubes. 2,444,572, July 6.

Lefebvre, Palma A.: *See*—
Macpherson, Duncan J., Lefebvre, and Escott.

Lenbom, Clinton, Chetek, Wis. Apparatus for playing baseball games. 2,444,516, July 6.

Leonard, Lloyd H., New York, N. Y. Axial flow helicopter. 2,444,781, July 6.

Leslie, Francis, Springfield, N. J. Making a purifying agent from steer bones. 2,444,571, July 6.

Le Tourneau, R. G., Inc., assignee: *See*—
Le Tourneau, Robert G.

Le Tourneau, Robert G., Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Power-actuated crane. 2,444,835, July 6.

Le Vesconte, Harold J., Glendale, Calif., and A. M. Schweda, assignors to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,444,657, July 6.

Levy, Paul, New York, N. Y. Playing piece. 2,444,517, July 6.

Lewis, Marvin W., Cleveland Heights, Ohio. Pull-out device. 2,444,518, July 6.

Lincoln Electric Company, The, assignee: *See*—
Landis, George G., and Hoenie.

Lindars, Herman: *See*—
Smith, Cecil H., and Lindars.

Linde Air Products Company, The, assignee: *See*—
Meincke, Edward, and Elsman.
Meincke, Edward, and Smith.

Lindemann, A. J., & Hoverson Company, assignee: *See*—
Thomes, Edwin J.

Linder, Åke, Stockholm, Sweden. Hair clip. 2,444,519, July 6.

Loew, Sigmund, Windsor, Ontario, Canada. Slide fastener machine. 2,444,706, July 6.

Lombard Governor Corporation, assignee: *See*—
Brown, Thomas W.

Lord, Harold W., Schenectady, N. Y., assignor to General Electric Company. Pulse generating circuits. 2,444,782, July 6.

Lord Manufacturing Company, assignee: *See*—
Worley, James D.

Loughlin, Bernard D., Bayside, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Wave-signal translating system. 2,444,741, July 6.

Lucas, Joseph E., Longview, assignor of one-tenth to M. N. Smith and M. J. Porter, Gregg County, Tex. Ball joint retainer. 2,446,658, July 6.

Lucas, Victor E.: *See*—
Emerson, William S., and Lucas.

Lundquist, Wilton G., Hohokus, N. J., assignor to Wright Aeronautical Corporation. Thrust balancing means. 2,444,859, July 6.

Lutjen, Martin, Hoboken, N. J. Gas turbine. 2,444,742, July 6.

Lysholm, Alf, Stockholm, Sweden, assignor, by mesne assignments, to J. C. Marble, New York, N. Y., L. M. Merrill, Westfield, N. J., and P. H. Batten, Racine, Wis., as trustees. Supercharging system for internal-combustion engines. 2,444,456, July 6.

Macgeorge, William D.: *See*—
Crowley, John A., Jr., and Macgeorge.

MacMahon, James D., Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation. Detergent briquette. 2,444,836, July 6.

MacMahon, James D., Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation. Detergent briquette. 2,444,837, July 6.

Macpherson, Duncan J., South Lancaster, P. A. Lefebvre, Cornwall, and W. Escott, Lancaster, Ontario, Canada. Connector. 2,444,450, July 6.

Magnetic Devices, Inc., assignee: *See*—
Price, Osborne L.

Mank, Raymond A., Pittsburgh, Pa. Tire chain. 2,444,573, July 6.

Mann, Arthur S., and H. Campbell, assignors to Paramount Textile Machinery Co., Kankakee, Ill. Hosiery drying table. 2,444,785, July 6.

Marble, Jarvis C., assignee, trustee, et al.: *See*—
Lysholm, Alf.

Marburg, Edgar, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Sectional hot top. 2,444,838, July 6.

Markkula, Raymond F., Los Angeles, assignor to American Braces, Oakland, Calif. Drop-foot brace. 2,444,839, July 6.

Marks, Graham W., F. Cossey, and R. S. Mills, Salt Lake City, Utah, assignors to the United States of America as represented by the Secretary of Interior. Metal lens holder. 2,444,457, July 6.

Marsh, Harold A., Brookline, assignor to Polaroid Corporation, Cambridge, Mass. Frame mounting flexible sheet-like materials. 2,444,520, July 6.

Marsh Stencil Machine Company, assignee: *See*—
Marsh, Walton C.
Marsh, Walton C., and Hempel.

Marsh, Walton C., assignor to Marsh Stencil Machine Company, Belleville, Ill. Gumming machine. 2,444,878, July 6.

Marsh, Walton C., and H. W. Hempel, assignors to Marsh Stencil Machine Company, Belleville, Ill. Stencil punch. 2,444,877, July 6.

Martin, Bradford, Washington, assignor, by mesne assignments, to Solar Engineering & Equipment Co., Beaver, Pa. Stencil decorating machine. 2,444,574, July 6.

Martin, Joe: *See*—
Oberbeck, August L., and Martin.

Martinuzzi, Bruno, assignee: *See*—
Brantingson, Sigurd.

Masonite Corporation, assignee: *See*—
Hall, Horace E., and Coleman.

Master, Warren S., Rutherford, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Rectifying system. 2,444,458, July 6.

Mather, Charles D., Essexville, Mich. Mechanical fish bait. 2,444,707, July 6.

Mathes, Roger A., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Salts of dithiocarbamic acids. 2,444,660, July 6.

Mathewson, Richard E.: *See*—
Kalning, Frederick E., and Mathewson.

Mathiasen, Roy L.: *See*—
Shepardson, Robert M., and Mathiasen.

Mathieson Chemical Corporation, assignee: *See*—
MacMahon, James D.

Matson, Leslie E., Jr.: *See*—
Jones, Mack C., and Matson.

Matthews, W. N., Corporation, assignee: *See*—
Mosley, Carl E.

Maude, Aylmer H., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y. Production of acetylene tetrachloride. 2,444,661, July 6.

May, Richard W., assignor to Collins Radio Company, Cedar Rapids, Iowa. Automatic tuning controls for radio apparatus and the like. 2,444,840, July 6.

McCombie, Horace R., Pittsburg, and C. D. Wilder, Berkeley, Calif., assignors to the United States of America, as represented by the United States Atomic Energy Commission. Low humidity meter. 2,444,613, July 6.

McConahey, Theodore D., and F. C. Redell, assignors to J. M. Huber Corporation, Borger, Tex. Polish rod hanger. 2,444,842, July 6.

McElhinney, Eric M., Dysart, Iowa. Coupling device. 2,444,575, July 6.

Meals, Robert N., Memphis, Tenn., assignor to General Electric Company. Preparation of alkylated silanes. 2,444,784, July 6.

Meincke, Edward, Scotch Plains, and J. M. Elsman, Maplewood, N. J., assignors to The Linde Air Products Company. Blowpipe apparatus for thermochemically removing metals. 2,444,890, July 6.

Meincke, Edward, Scotch Plains, and H. T. Smith, East Orange, N. J., assignors to The Linde Air Products Company. Blowpipe apparatus. 2,444,900, July 6.

Meinertz, Mark F., Copenhagen, Denmark. Cylinder construction. 2,444,662, July 6.

Melidoni, Constantine, Fort Lee, N. J. Cable adjuster. 2,444,743, July 6.

Melvill, Gordon K.: *See*—
Popper, Otto, and Melvill.

Meronk, Anthony J., Jefferson, Wis. Clothesline holder. 2,444,841, July 6.

Merrill, Leslie M., assignee, trustee, et al.: *See*—
Lysholm, Alf.

Miller, Charles F., assignor to Jacquard Knitting Machine Co., Inc., Philadelphia, Pa. Multiple selection pattern mechanism. 2,444,894, July 6.

Miller, Milo F., Kansas City, Mo. Chime switch. 2,444,576, July 6.

Miller, William J., Jr., Denver, Colo. Pipe and cigarette lighter. 2,444,663, July 6.

Mills, Ralph S.: *See*—
Marks, Graham W., Cossey, and Mills.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Anderson, John M.
Gille, Willis H., and Sigford.
Isserstedt, Siegfried G.

Minneapolis-Moline Power Implement Company, assignee: *See*—
Swenson, William E.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Hesselroth, Charles F.
Kellgren, Waldo T., and Drew.

Modrey, Henry J., London, England, assignor to Modrey Patents Corporation, Essex County, N. J. Electrical plug and socket connector with retractable contacts. 2,444,843, July 6.

Modrey Patents Corporation, assignee: *See*—
Modrey, Henry J.

Molins Machine Company, Limited, assignee: *See*—
Ruau, Félix F.

Moncrief, John L., Eatontown, N. J., assignor to the United States of America as represented by the Secretary of War. Remote control system. 2,444,460, July 6.

Monsanto Chemical Company, assignee: *See*—
Emerson, William S., and Lucas.
Fordyce, Reid G.

Moore, Charles O.: *See*—
Kennedy, Grosvenor A., and Moore.

Morey, Robert E., Washington, D. C., and R. C. Wayne, United States Navy. Support for crucibles and ladles. 2,444,461, July 6.

Morris Paper Mills, assignee: *See*—
Clarke, John D.

Morton, Lloyd P., Great Falls, Mont. Auto chain. 2,444,462, July 6.

Mosley, Carl E., Overland, assignor to W. N. Matthews Corporation, St. Louis, Mo. Circuit control apparatus. 2,444,745, July 6.

Mosner, Peter, Alexandria, Va., and O. Steinitz, New York, N. Y. Instrument for navigation. 2,444,708, July 6.

Mossholder, Joseph L., Puente, Calif. Machine for preparing containers for transplanted nursery stock. 2,444,744, July 6.

Mulkey, Sam, Company, assignee: *See*—
Mulkey, Stanley A., and Furlong.

Mulkey, Stanley A., Lee's Summit, and R. Furlong, assignors to Sam Mulkey Company, Kansas City, Mo. Engine mounting for adjustable conveyors. 2,444,521, July 6.

Muller, Carl W.: *See*—
Stout, Raymond K., Muller, Crane, and Holloman.

Mulnix, Ersel C., Lake Bluff, Ill. Display package. 2,444,709, July 6.

Munschauer, Frederick E., assignor to Niagara Machine & Tool Works, Buffalo, N. Y. Machine tool. 2,444,664, July 6.

Murata, Hideko, assignor to King Shoyu Company, Honolulu, Territory of Hawaii. Sauce preparation. 2,444,577, July 6.

Myers, Barton E., Rome, assignor of one-half to W. T. Kozlowski, Clark Mills, N. Y. Piston ring ridge remover. 2,444,614, July 6.

Nash-Kelvinator Corporation, assignee: *See*—
Philipp, Lawrence A.

Nathanson, Max, Montreal, Quebec, Canada. Ballast unit for fluorescent lamp lighting apparatus. 2,444,522, July 6.

National Cash Register Company, The, assignee: *See*—
Goodbar, Mayo A., and Cocup.

National Secondary Recovery Corporation, assignee: *See*—
Steffen, Ralph M.

Navy, United States of America as represented by the Secretary of the, assignee: *See*—
Gillett, Glenn D.
Hite, George, and Whitham.
Swennes, Benjamin A.

Neal, Ernest C., Chicago, Ill., assignor of one-half to O. H. Neal and one-half to C. Jacobsen, Portland, Oreg. Gunsight. 2,444,844, July 6.

Neal, George H., assignee, et al.: *See*—
Neal, Ernest C.

Nederlandsche Organisatie voor toegepastnatuurwetenschappelijk onderzoek ten behoeve van de Voeding, assignee: *See*—
Van der Laan, Pancras J.

Netherwood, Paul H.: *See*—
Robinson, Preston, and Netherwood.

Neufeld, Jacob, Tulsa, Okla. Navigational method and apparatus. 2,444,578, July 6.

Newbold, Park L., Cedar Rapids, Iowa. Storm window support. 2,444,746, July 6.

Newsom, Kitchener K., San Francisco, Calif. Fruit process. 2,444,579, July 6.

Niagara Machine & Tool Works, assignee: *See*—
Munschauer, Frederick E.

Niewoehner, Fred, Bergenfield, N. J., assignor to Postage Stamp Machine Co., New York, N. Y. Coin-controlled vending machine. 2,444,747, July 6.

Nineteen Hundred Corporation, assignee: *See*—
Geldhof, Peter E., and Ringer.

Nixon, Willoughby F.: *See*—
De la Riestra, Juan C. and M. A., and Nixon.

Nordberg Manufacturing Company, assignee: *See*—
Griesbaber, Emil, and Anderson.

Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Producing can bodies. 2,444,483, July 6.

Northern Pump Company, The, assignee: *See*—
Gondek, John T.

Norwood, Donald W., Pasadena, Calif. Device for use in determining photographic exposures. 2,444,464, July 6.

Nye, Norman H., Cuyahoga Falls, and W. E. Rogers, Stow, assignors to The Vaughn Machinery Company, Cuyahoga Falls, Ohio. Apparatus for surface conditioning wires and the like. 2,444,523, July 6.

Oberbeck, August L., and J. Martin, Jefferson City, Mo. Internal-combustion engine. 2,444,665, July 6.

Ohio Crankshaft Company, The, assignee: *See*—
Somes, Howard E.
Somes, Howard E., and Purvin.

Orain, Francois M., Saint Cloud, France. Coupling device. 2,444,666, July 6.

Paramount Textile Machinery Co., assignee: *See*—
Mann, Arthur S., and Campbell.

Parissi, Anthony J., Cohoes, N. Y. Clock with visible and audible alarm means. 2,444,748, July 6.

Parker Appliance Company, The, assignee: *See*—
Wolfram, John N.

Parrish, Maxfield, Jr., Lexington, assignor to Polaroid Corporation, Cambridge, Mass. Visor. 2,444,524, July 6.

Parrott, Robert D.: *See*—
Wise, Raleigh J., and Parrott.

Patten, Samuel, assignee: *See*—
Weed, John H.

Pavlic, Albert A., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Acetals and mercaptals of aldehydes having two vicinal mercapto groups and their self-condensation polymers and preparing same. 2,444,525, July 6.

Pawley, William D., Jr., Miami Beach, Fla. Sailboat. 2,444,526, July 6.

Pearce, Albert F., Hampton Hill, and N. C. Barford, Hayes, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England. Electron discharge device utilising cavity resonators. 2,444,740, July 6.

Perley, George A., Wyncote, assignor to Leeds and Northrup Company, Philadelphia, Pa. Ph-responsive glass electrode. 2,444,845, July 6.

Peters, John F., Leonia, N. J., assignor to American Can Company, New York, N. Y. Method and machine for making can bodies. 2,444,465, July 6.

Petersen, Norman L., Nichols, Conn. Clothesline support. 2,444,879, July 6.

Peterson, C. Lynn, assignor to Peterson Filters and Engineering Co., Salt Lake City, Utah. Scraping device for rotary drum filters. 2,444,466, July 6.

Peterson Filters and Engineering Co., assignee: *See*—
Peterson, C. Lynn.

Philadelphia Quartz Company, assignee: *See*—
Hay, Harold R.

Philco Corporation, assignee: *See*—
Hall, Russell M.

Philipp, Lawrence A., assignor to Nash-Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,444,667, July 6.

Pitts, George B., assignee: *See*—
Hanson, Edward.

Pittsburgh Plate Glass Company, assignee: *See*—
Cummings, Lowell O., and Vogel.
Devol, Manson L.

Poirier, Ernest A., Waterville, Maine. Method of and apparatus for providing a response to the consistency of paper-making stocks. 2,444,668, July 6.

Polaroid Corporation, assignee: *See*—
Blout, Elkan R., and Amon.
Cochran, Clarence W.
Husek, Helen P.
Marsh, Harold A.
Parrish, Maxfield, Jr.
Richardson, John H.

Pollard, Jack C., and C. F. Sellers, Houston, Tex., assignors to Robert H. Ray Co. Support for submerged area surveying. 2,444,660, July 6.

Pomeroy, Richard D., Altadena, Calif. Recovering organic acids from sour sewage sludge. 2,444,527, July 6.

Popper, Max, Brooklyn, N. Y. Elastic seam with concealed zigzag stitching. 2,444,467, July 6.

Popper, Otto, and G. K. Melvill, Johannesburg, Transvaal, Union of South Africa, said Melvill assignor to said Popper. Intravaginal pack and its manufacture. 2,444,528, July 6.

Porter, Jones, assignee, et al.: *See*—
Lucas, Joseph E.

Porter, Roscoe C.: *See*—
Briggs, Southwick W., and Porter.

Porter, Roscoe C., Arlington, Va., assignor, by mesne assignments, to The Briggs Filtration Company, Bethesda, Md. Method and apparatus for forming internal-combustion engine fuel charges. 2,444,670, July 6.

Postage Stamp Machine Co., assignee: *See*—
Niewoehner, Fred.

Potts, Edward J., Stone Mountain, Ga. Dirigible headlight device. 2,444,846, July 6.

Poupitch, Ougljesa J., assignor to Illinois Tool Works, Chicago, Ill. Coupling thread locking means. 2,444,847, July 6.

Powers Accounting Machines Limited, assignee: *See*—
Thomas, Arthur.

Powers, Paul O., Manheim Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Linoleum type surface covering. 2,444,468, July 6.

Prager, Frank D., Chicago, Ill., assignor to Graver Tank & Mfg., Co., Inc. Liquid treatment tank for sludge removal means therefor. 2,444,671, July 6.

Prather, Marion W., Philo, Calif. Diaphragm applicator. 2,444,672, July 6.

Pratt, Verneur E., and G. F. Gray, Norwalk, Conn. Adjustable feed shelves for paper handling machinery. 2,444,580, July 6.

Price, Osborne I., assignor to Magnetic Devices, Inc., Frederick, Md. Manufacture and construction of solenoids, magnets, and coils, and the protection of the winding thereof. 2,444,469, July 6.

Ptáček, Anna, New York, N. Y. Radio device for secret communication. 2,444,750, July 6.

Purvin, Benjamin R.: *See*—
Somes, Howard E., and Purvin.

Purvin, Robert L., Goose Creek, Tex., assignor to Standard Oil Development Company, Continuous polymerization of isobutylene. 2,444,848, July 6.

Puster, Louis M., Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company. Electrical switch. 2,444,529, July 6.

Pyner, Robert L., Roselle Park, N. J. Guide for correcting typewriting. 2,444,673, July 6.

Rackett, Gerald F., Los Angeles, assignor to Technicolor Motion Picture Corporation, Hollywood, Calif. Continuous drum printer for motion pictures. 2,444,785, July 6.

Rackett, Gerald F., Los Angeles, assignor to Technicolor Motion Picture Corporation, Hollywood, Calif. Cinematographic optical printer having a toothed register belt. 2,444,786, July 6.

Radio Corporation of America, assignee: *See*—
Hillier, James.
Jones, Mack C., and Matson.
Ramberg, Edward G.
Sanders, Royden C., Jr.
Schlesinger, Kurt.
Torsch, Charles E.
Trevor, Bertram.

Rainey, James L.: *See*—
Auten, Robert W., and Rainey.

Ramberg, Edward G., New York, N. Y., assignor to Radio Corporation of America. Correction for spherical and chromatic abberations in electron lens. 2,444,710, July 6.

Rath, Karl, New York, N. Y. Multiple light baffle brightness meter for photoelectric exposure determining devices. 2,444,674, July 6.

Rath, Karl, New York, N. Y. Exposure time control for photographic printing apparatus. 2,444,675, July 6.

Ray, Robert H., Co., assignee: *See*—
Pollard, Jack C., and Sellers.

Rechton, George D., Los Angeles, D. J. Ward, Sherman Oaks, and J. H. Watson, Los Angeles, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Machine for forming materials. 2,444,787, July 6.

Redell, Frederick C.: *See*—
McConahey, Theodore D., and Redell.

Reeves, Donald H., assignor to General Motors Corporation, Dayton, Ohio. Ice cube tray and grid. 2,444,789, July 6.

Reichenbach, Albert T., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Steel strip tempering. 2,444,786, July 6.

Reilly, Alfred F., North Attleboro, Mass. Flint. 2,444,849, July 6.

Reinhardt, Albrecht E., Flourtown, assignor to Derbyshire Machine & Tool Company, Philadelphia, Pa. Eductor. 2,444,615, July 6.

Replogle, George W.: *See*—
Samiran, David, and Replogle.

Republic Steel Corporation, assignee: *See*—
Kopec, Walter.

Resinous Products & Chemical Company, The, assignee: *See*—
Auten, Robert W., and Rainey.

Rheem Manufacturing Company, assignee: *See*—
Lampert, Albert J.

Richards, Carroll H., Boston, Mass. Torque responsive clutch for controlling shifting of gear ratios of transmissions. 2,444,530, July 6.

Richardson, Charles H., Great Neck, N. Y., assignor to The Sperry Corporation. Variable-speed mechanism. 2,444,470, July 6.

Richardson, John H., Needham, assignor to Polaroid Corporation, Cambridge, Mass. Chuck. 2,444,531, July 6.

Richardson, John H., Needham, assignor to Polaroid Corporation, Cambridge, Mass. Manufacturing reflecting optical elements. 2,444,532, July 6.

Richardson, John H., Needham, assignor to Polaroid Corporation, Cambridge, Mass. Manufacturing reflecting optical elements. 2,444,533, July 6.

Ringer, Luther: *See*—
Geldhof, Peter E., and Ringer.

Ringler, William A., Wayne, Pa., assignor to The Gardner-Richardson Company, Middletown, Ohio. Sealed box. 2,444,895, July 6.

Roberts, Frederick W., Fairfield, and R. C. Curtis, New Haven, Conn., assignors to Dictaphone Corporation, New York, N. Y. Sound recording and reproducing control system. 2,444,676, July 6.

Robertshaw-Fulton Controls Company, assignee: *See*—
Puster, Louis M.

Robinson, Preston, Williamstown, and P. H. Netherwood, assignors to Sprague Electric Company, North Adams, Mass. Electrical seal. 2,444,880, July 6.

Rock, Arthur F., assignor to General Dry Batteries, Inc., Lakewood, Ohio. Dry cell with sealing means. 2,444,616, July 6.

Rogers, Anthony A., assignee, et al.: *See*—
Holmen, Louis W.

Rogers, Malone L., Portsmouth, Va. Heating and brazing torch. 2,444,850, July 6.

Rogers, Malone L., Portsmouth, Va. Heating and brazing torch. 2,444,851, July 6.

Rogers, Walter E.: *See*—
Nye, Norman H., and Rogers.

Röhm & Haas Company, assignee: *See*—
Kroeker, Edwin H., and Crozall.

Rosenblum, Robert A., assignor to The Dole Valve Company, Chicago, Ill. Flow control device. 2,444,677, July 6.

Ross Gear & Tool Co., assignee: *See*—
Cresen, William K.

Rotary Machine Company, Inc., assignee: *See*—
Christiansen, Christian.

Ruau, Félix F., Deptford, London, assignor to Molins Machine Company, Limited, London, England. Gun counter-recoil assist mechanism. 2,444,852, July 6.

Ruberoid Co., The, assignee: *See*—
Abraham, Herbert.

Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Terpene isomerization. 2,444,790, July 6.

Salinger, Hans W. G., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Single side-band modulation system. 2,444,534, July 6.

Samiran, David, Osborn, and G. W. Replogle, Dayton, Ohio. Switch. 2,444,471, July 6.

Samuel, Sigmund, Baltimore, Md. Collapsible garment frame. 2,444,535, July 6.

Samuels, Joseph V., assignor of thirty per cent to O. W. Chenault, San Francisco, Calif. Protector for hats. 2,444,617, July 6.

Sanders, Royden C., Jr., Hightstown, N. J., assignor to Radio Corporation of America. Radio bomb release system. 2,444,678, July 6.

Sargent & Company, assignee: *See*—
Freysinger, John B.

Scharf, Charles, Ridgefield, N. J. Strip print album. 2,444,853, July 6.

Schlesinger, Kurt, New York, N. Y., assignor to Radio Corporation of America. Television amplifier. 2,444,854, July 6.

Schooley, Allen H., Washington, D. C. Voltage regulator circuit. 2,444,472, July 6.

Schweda, Albert M.: *See*—
Le Veconte, Harold J., and Schweda.

Seofield, Donald W., assignor to Electromaster, Inc., Detroit, Mich. Terminal switch with thermostatic safety release. 2,444,680, July 6.

Scott, Keaneth L., Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Method and apparatus for sorting magnetic materials according to their residual magnetism. 2,444,751, July 6.

Seamon, A. & L., assignee: *See*—
Seamon, Abraham A.

Seamon, Abraham A., assignor to A. & L. Seamon, Brooklyn, N. Y. Billfold with secret compartment. 2,444,581, July 6.

Seamster, Norman J., Tucson, Ariz. Swing seat. 2,444,618, July 6.

Searle, Norman E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of N-arylmaleimides. 2,444,534, July 6.

Sectish, Charles W.: *See*—
Leet, Harold A., and Sectish.

Seldon, George E., Kirkwood, Mo. Automotive air conditioning apparatus. 2,444,537, July 6.

Sellers, Clemille F.: *See*—
Pollard, Jack C., and Sellers.

Seymour, George W., and F. Fortess, Cumberland, Md., assignor to Celanese Corporation of America. The Production of butadiene and catalyst therefor. 2,444,536, July 6.

Shand, George: *See*—
Whalley, Harry, and Shand.

Sharpe, Roy E., Harrisonburg, Va. Propeller mounting. 2,444,539, July 6.

Shaukis, Arthur J., Haverhill, Mass. Mailbox. 2,444,679, July 6.

Shaw, Joe C., assignor to Young Radiator Company, Racine, Wis. Oil temperature control valve. 2,444,711, July 6.

Shell Development Company, assignee: *See*—
Bell, James A.

Shepardson, Robert M., Cranford, and R. L. Mathiesen, Fords, N. J., assignors to Standard Oil Development Company. Production of aromatics by thermal cracking. 2,444,855, July 6.

Sherman, H. B., Manufacturing Co., assignee: *See*—
Doerr, Raymond S., and K.

Sherwin-Williams Company, The, assignee: *See*—
Hanson, Benjamin R.

Short, Thomas T.: *See*—
Uttal, Joseph A., and Short.

Shoyu, King, Company, assignee: *See*—
Murata, Hideko.

Shreir, Louis L., London, England, assignor to Baker & Company, Incorporated, Newark, N. J. Producing a catalyst of fibrous asbestos. 2,444,896, July 6.

Shrout, Fassett O., Harriman, Tenn. Culinary utensil. 2,444,681, July 6.

Siegler, Edouard H., Takoma Park, Md. Particles coated with 2,2-bis(parachlorophenyl)-1,1,1-trichloroethane. 2,444,752, July 6.

Siever, Paul, Minneapolis, Minn. Tire deflation indicator. 2,444,856, July 6.

Sigford, John V.: *See*—
Gille, Willis H., and Sigford.

Signaigo, Frank K., Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Light polarising polyvinyl orthoborate films. 2,444,712, July 6.

Sinclair Refining Company, assignee: *See*—
Teter, John W., and Bauer.

Singer Manufacturing Company, The, assignee: *See*—
Happe, Reynold.

Skinker, Murray F., Montclair, L. B. Haigh, West Orange, and R. O. Hall, East Orange, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Making rectifiers. 2,444,473, July 6.

Sloan, Philip W., Grosse Pointe, Mich. Oil seal. 2,444,901, July 6.

Smith, Alexander N., Spring Valley, N. Y. Cooking utensil. 2,444,753, July 6.

Smith, Allen S., Ann Arbor, Mich., assignor to Blaw-Knox Company, Pittsburgh, Pa. Selective solvent treatment of liquid hydrocarbon mixtures for segregation of contained aromatics. 2,444,582, July 6.

Smith, Cecil H., London, and H. Lindars, Sheffield, England, said Smith assignor to said Lindars. Electrical timing device. 2,444,619, July 6.

Smith, Dennis W., assignor to Colborne Manufacturing Company, Chicago, Ill. Pie crimping device. 2,444,857, July 6.

Smith, Hugh T.: *See*—
Meincke, Edward, and Smith.

Smith, Luther L., Warner Robins, Ga. Overflow control for filter beds. 2,444,682, July 6.

Smith, M. Neal, assignee, et al.: *See*—
Lucas, Joseph E.

Snip, John G., Lamar, Mo. Apparatus for operating two oars with one hand. 2,444,683, July 6.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Crowley, John A., Jr., and Macgeorge.
Johnson, George L., and Gagerbaumer.

Solar Engineering & Equipment Co., assignee: *See*—
Martin, Bradford.

Solari, Archie J., assignor to Crane Packing Company, Chicago, Ill. Pressed-in package type rotary seal. 2,444,713, July 6.

Somes, Howard E., Detroit, Mich., assignor to The Ohio Crankshaft Company, Cleveland, Ohio. Coil and core arrangement. 2,444,475, July 6.

Somes, Howard E., and B. R. Purvin, Detroit, Mich., assignors, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Fluid pressure device. 2,444,474, July 6.

Specialties Development Corporation, assignee: *See*—
Bradford, Victor H.

Speier, John L., Pittsburgh, Pa., assignor to Corning Glass Works, Corning, N. Y. Organosilicon composition and preparing it. 2,444,858, July 6.

Spencer, Bruce N., Jr., assignee: *See*—
Braidwood, Robert B.

Sperry Corporation, The, assignee: *See*—
Feenberg, Eugene.
Isbister, Eric J.
Richardson, Charles H.

Sprague Electric Company, assignee: *See*—
Burnham, John.
Robinson, Preston, and Netherwood.

Square D Company, assignee: *See*—
Jackson, John G., and Kingdon.

Stahnke, Leslie R., Chicago, and W. H. Lannert, Skokie, assignors to Western Engineering and Tool Design, Chicago, Ill. Fishing line float. 2,444,791, July 6.

Standard Oil Development Company, assignee: *See*—
Arundale, Erving.
Krebs, Robert W.
Purvin, Robert L.
Shepardson, Robert M., and Mathiasen.

Stastny, Jacob, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Article forming apparatus. 2,444,757, July 6.

Stearn, Franklin A., East Newark, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electric annunciator drop. 2,444,476, July 6.

Steffen, Ralph M., North Hollywood, Calif. Apparatus for heating oil wells and pumping oil therefrom. 2,444,754, July 6.

Steffen, Ralph M., North Hollywood, Calif. Apparatus for oil sand heating. 2,444,755, July 6.

Steffen, Ralph M., North Hollywood, Calif., assignor to National Secondary Recovery Corporation, Reno, Nev. Apparatus for progressively heating oil sands surrounding oil wells. 2,444,756, July 6.

Steinitz, Otto: *See*—
Mosner, Peter, and Steinitz.

Sterrett, Robert R., Totowa, N. J., assignor to United States Rubber Company, New York, N. Y. Preservation of 1,3-diene copolymers with mono-substituted thioureas. 2,444,881, July 6.

Stewart, George H., Akron, and E. R. Traxler, Stow, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Power transmission belt. 2,444,683, July 6.

Stilibach, Jan H., Woburn, Mass. Cleaning implement. 2,444,758, July 6.

Stoeck, Joseph F., and A. J. Valrose, Chicago, Ill. Portable light. 2,444,540, July 6.

Storer, Richard M., Denver, Colo., assignor to General Motors Corporation, Dayton, Ohio. Mold for freezing liquids and semi-liquids. 2,444,792, July 6.

Stout, Raymond K., Dayton, C. W. Muller, Osborn, C. J. Crane and G. V. Holloman, Dayton, Ohio. Automatic miniature radio range for student training. 2,444,477, July 6.

Strickland, Elwin M., Detroit, Mich. Universal support for article holders. 2,444,541, July 6.

Strutt, Maximiliaan J. O.: *See*—
Van Der Ziel, Aldert, and Strutt.

Sturtevant, Mark J., assignor to Wingfoot Corporation, Akron, Ohio. Inflatable container and pack therefor. 2,444,859, July 6.

Summer, Harry, Brooklyn, N. Y. Stencil and work holder for multicolor printings. 2,444,860, July 6.

Sun Chemical Corporation, assignee: *See*—
Kaplan, William.

Swanson, Gunnar E., New Britain, Conn. Locking and unlocking mechanism for cylinder locks. 2,444,542, July 6.

Swanson, John W., assignor to The Institute of Paper Chemistry, Appleton, Wis. Mannogalactan mucilages and producing same. 2,444,412, July 6.

Swennes, Benjamin A., Rockford, Ill., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of the Navy. Wheeled vehicle. 2,444,769, July 6.

Swenson, William E., St. Paul, assignor to Minneapolis-Moline Power Implement Company, Minneapolis, Minn. Latching door for enclosures. 2,444,543, July 6.

Symmes, Carleton R., Saugus, assignor to H. P. Hood & Sons, Inc., Charlestown, Mass. Frozen-food container. 2,444,861, July 6.

Tambini, Eugene, Milford, Conn. Sanding device. 2,444,760, July 6.

Tawney, Pliny O., Passaic, N. J., assignor to United States Rubber Company, New York, N. Y. Alpha beta dimethylene succinonitrile. 2,444,882, July 6.

Taylor, Clyde B.: *See*—
Allen, Frank M., and Taylor.

Technicolor Motion Picture Corporation, assignee: *See*—
Rackett, Gerald F.

Temko, Richard S., and A. Katz, New York, assignors to Home Curtain Corp., Far Rockaway, N. Y. Curtain and making same. 2,444,883, July 6.

Teter, John W., and O. W. Bauer, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y. Tetrachlorobutyronitrile. 2,444,478, July 6.

Thomas, Arthur, Wallington, assignor to Powers Accounting Machines Limited, London, England. Mechanism for feeding statistical record cards and delivering them to a receiver. 2,444,544, July 6.

Thomas, Charles L., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Catalytic cracking of hydrocarbons. 2,444,545, July 6.

Thomes, Edwin J., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis. Grid for fluid fuel stoves. 2,444,862, July 6.

Thorngren, Helmer A., Detroit, Mich. Apparatus for grinding the surfaces of grooved rolls. 2,444,793, July 6.

Threads, Incorporated, assignee: *See*—
Cone, Richard R.

Tide Water Associated Oil Company, assignee: *See*—
Gebauer, Adam H.

Tornberg, Isidor, Plainfield, N. J., assignor to Dadson Enterprises, Inc., New York, N. Y. Method for mechanically simulating genuine oil paintings. 2,444,863, July 6.

Torsen, Charles E., Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America. Protective circuit. 2,444,902, July 6.

Touchett, Lawrence P., Fond du Lac, Wis., assignor to E Z Paintr Corporation. Sloping bottom tray and support structure. 2,444,584, July 6.

Traxler, Eugene R.: *See*—
Stewart, George H., and Traxler.

Trevor, Bertram, Riverhead, Long Island, N. Y., assignor to Radio Corporation of America. Frequency-modulated pulse generator. 2,444,479, July 6.

Trotter, John C., Williamsville, assignor to Bell Aircraft Corporation, Buffalo, N. Y. Gun battery with ammunition feed means. 2,444,884, July 6.

Troupe, Donald F.: *See*—
Young, Cyril C., and Troupe.

Tubiolo, Caroline, Rochester, N. Y. Nursing bottle holder. 2,444,585, July 6.

Tung-Sol Lamp Works, Inc., assignee: *See*—
Braunsdorf, Reginald K.

Union Carbide and Carbon Corporation, assignee: *See*—
Aronson, Peter R.

Union Oil Company of California, assignee: *See*—
Lake, George R.

Union Special Machine Company, assignee: *See*—
Le Vesconte, Harold J., and Schweda.

Union Switch and Signal Company, The, assignee: *See*—
Walker, Alec H. B.

United Aircraft Corporation, assignee: *See*—
Eaton, Edwin D.

United Mattress Machinery Co., Inc., assignee: *See*—
Kaining, Frederick E., and Mathewson.

United States Rubber Company, assignee: *See*—
Clayton, William J., and Butsch.
Sterrett, Robert R.
Tawney, Pliny O.

Universal Oil Products Company, assignee: *See*—
Ipatieff, Vladimir N., and Haensel.
Thomas, Charles L.

Urbant, Sam: *See*—
Braun, Ralph L. P., and Urbant.

Utilities Distributors, Inc., assignee: *See*—
Anderson, Eric M., Kelso, and Ginn.
Kelso, Beecher O.

Uttal, Joseph A., and T. T. Short, Fort Wayne, Ind., assignors to General Electric Company. Voltage stabilising system. 2,444,796, July 6.

Valrose, Anthony J.: *See*—
Stoeck, Joseph F., and Valrose.

Van Buren, Walter H., Philadelphia, Pa., assignor to The B. F. Goodrich Company, New York, N. Y. Vulcanizing. 2,444,908, July 6.

Van der Laan, Pancras J., Utrecht, assignor to Nederlandsche Organisatie voor toegepastnatuurwetenschappelijk ondersoek ten behoeve van de Voeding, The Hague, Netherlands. Producing ketogulonic acid and its esters. 2,444,885, July 6.

Van Der Ziel, Aldert, and M. J. O. Strutt, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. High-frequency tuned amplifying circuit. 2,444,864, July 6.

Vastano, Joseph J., assignor to F. & V. Manufacturing Co. Inc., East Providence, R. I. Expansible linkage for bracelets and watch bracelets. 2,444,684, July 6.

Vaughn Machinery Company, The, assignee: *See*—
Nye, Norman H., and Rogers.

Vendo Company, The, assignee: *See*—
Young, Cyril C., and Troupe.

Vickers, Theodore W., Los Angeles, Calif. Screw and nut actuating mechanism. 2,444,886, July 6.

Vogel, Henry A.: *See*—
Cummings, Lowell O., and Vogel.

Vogt, Henry, Machine Co. Inc., assignee: *See*—
Kobaugh, Benjamin F.

Voytech, Charles F.: *See*—
Hastings, Shirrel A., and Voytech.

Voytech, Charles F., assignor to Crane Packing Company, Chicago, Ill. Package-type seal. 2,444,714, July 6.

Walker, Alec H. B., London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa. Voltage regulating transformer. 2,444,715, July 6.

Wallace, Fred C., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electric motor synchronizing system. 2,444,480, July 6.

Walsh, Robert H., Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vulcanization of chloroprene elastomers in the presence of dinitrosobenzene and catechol. 2,444,546, July 6.

Walston, Verne E., Pataskala, Ohio. Emergency rain garment. 2,444,761, July 6.

War, United States of America as represented by the Secretary of, assignee: *See*—
Moncrief, John L.

Ward, Delbert J.: *See*—
Rechton, George D., Ward, and Watson.

Warp Compressing Machine Company, assignee: *See*—
Javery, Frank B.

Warrington, John P., Bellflower, Calif. Spring heel adapter. 2,444,865, July 6.

Waters, Harry P., New York, N. Y. Multiple fabrication method and apparatus for liquid-tight envelope bags. 2,444,685, July 6.

Waters, Harry P., New York, N. Y. Bag and making the same. 2,444,762, July 6.

Watkins, Thomas W., Washington, D. C., assignor to Beauty Research, Incorporated. Hair drier. 2,444,481, July 6.

Watson, Jack H.: *See*—
Rechton, George D., Ward, and Watson.

Wayne, Robert C.: *See*—
Morey, Robert C., and Wayne.

Weed, John H., West Sunbury, assignor of one-half to S. Patten, Butler, Pa. Chain jack and tightener. 2,444,566, July 6.

Weir, Leander M., Hyde Park, N. Y. Faceting head. 2,444,795, July 6.

Western Electric Company, Incorporated, assignee: *See*—
Heath, Herbert P.
Scott, Kenneth L.
Stastny, Jacob.

Western Engineering and Tool Design, assignee: *See*—
Stahnke, Leslie R., and Lannert.

Western Union Telegraph Company, The, assignee: *See*—
Wise, Raleigh J., and Parrott.

Weston, Bonheur M., Detroit, Mich. Conditioning refractory for making molds and cores. 2,444,419, July 6.

Whalley, Harry, and G. Shand, Sale, England, assignors to General Electric Company. Electrical synchronising control system. 2,444,796, July 6.

White, James C., Richmond, Ky. Double adjustment wrench having thread and rack adjustments. 2,444,686, July 6.

Whitehead, William A., Fulwood, Preston, England, assignor to The Goss Printing Press Company, Chicago, Ill. Printing machine. 2,444,547, July 6.

Whitham, Glenn E.: *See*—
Hite, George, and Whitham.

Whitin Machine Works, assignee: *See*—
Crockett, Frank L.

Widakowich, Marius H. W., Stocksund, Sweden. Periodic circuit breaker with a liquid conductor particularly for contact current changers. 2,444,687, July 6.

Widerstedt, Alfred W.: *See*—
Christian, Rodney E., and Widerstedt.

Wiebe, Carl R., Wichita, Kans. Necktie accessory. 2,444,548, July 6.

Wilder, Coleman D.: *See*—
McCombie, Horace E., and Wilder.

Williams, Alfred L. W., Cleveland Heights, and D. E. Christian, Medina, assignor to The Brush Development Company, Cleveland, Ohio. Damping mechanical vibratory devices. 2,444,620, July 6.

Williams, William D., Scotia, N. Y., assignor to General Electric Company. Magnetic coupling. 2,444,797, July 6.

Willson, Edward A., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Increasing the particle size of synthetic rubber latex and forming a film therefrom. 2,444,689, July 6.

Wilson, Harry C., Sherman Oaks, assignor to R. H. Clark, Los Angeles, Calif. Toolholder. 2,444,621, July 6.

Wilson, Nina M., assignee: *See*—
Wilson, Winfred E.

Wilson, Wayne E., Schenectady, N. Y., assignor to General Electric Company. Electrode adapter, 2,444,798, July 6.

Wilson, Winfred E., North Hollywood, Calif., assignor of one-half to N. M. Wilson, Plume. 2,444,688, July 6.

Wing, Arthur K., Jr., Nutley, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electron tube with external anode. 2,444,482, July 6.

Wing, Arthur K., Jr., Nutley, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Filament support. 2,444,483, July 6.

Wingfoot Corporation, assignee: *See*—
Clifford, Albert M.
Kilborn, Karl B.
Sturtevant, Mark J.

Wise, Raleigh J., Dunellen, and R. D. Parrott, West New York, N. J., assignors to The Western Union Telegraph Company, New York, N. Y. Facsimile telegraph signal recorder. 2,444,484, July 6.

Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,444,622, July 6.

Wood, Winchester R., Nahant, and E. E. Gaudet, West Lynn, Mass., assignors to General Electric Company. Generation system. 2,444,799, July 6.

Worley, James D., Burbank, Calif., assignor to Lord Manufacturing Company, Erie, Pa. Bonded rubber joint for couplings and the like and making the same. 2,444,904, July 6.

Wright Aeronautical Corporation, assignee: *See*—
Lundquist, Wilton G.

Wright, Oliver A.: *See*—
Bassinger, Ross, and Wright.

Wuensch, Charles E., Saratoga, Calif. Pump. 2,444,586, July 6.

Wyeth, Ralph S., Newark, Ohio. Supplemental food-storage cabinet for use in conjunction with refrigerators. 2,444,887, July 6.

Xenakis, James J., Chicago, Ill. Closure fastener. 2,444,716, July 6.

Young, Cyril C., and D. F. Troupe, assignors to The Vendo Company, Kansas City, Mo. Steam cooker with thermostatic boiler control. 2,444,587, July 6.

Young Radiator Company, assignee: *See*—
Shaw, Joe C.

Yule, John A. C., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic masking using the Clayden effect. 2,444,867, July 6.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 6TH DAY OF JULY, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Blower, Reversible rotary. F. B. Yingling. Re. 23,015, July 6.

Piston ring. H. M. Bramberry. Re. 23,014, July 6.

LIST OF PLANT INVENTIONS

Apple tree. M. La Pietra. 801, July 6.

Chrysanthemum plant. H. Prusheck. 802, July 6.

Rose plant. E. S. Boerner. 799–800, July 6.

LIST OF DESIGN INVENTIONS

Airplane. E. H. Heinemann and L. J. Devlin. 150,137, July 6.
Airplane. M. Wibault. 150,181, July 6.
Ash tray. P. Reynolds. 150,159, July 6.
Ash tray. J. B. Stier. 150,168, July 6.
Beauty tray and comb holder, Covered combined. G. A. and E. L. Lemke. 150,143, July 6.
Bed lamp bracket. M. H. Kruger. 150,142, July 6.
Blower for cleaning, drying, and spraying purposes, Motor driven. E. W. Vose. 150,177, July 6.
Cabinet for radio transmitter. L. Kniep, Jr. 150,141, July 6.
Cabinet, or the like, Radio. F. C. Burton. 150,108, July 6.
Camera. D. F. Hawkins and W. A. Moore. 150,135, July 6.
Cap for a twin lipstick. W. S. Jackson. 150,139, July 6.
Car, Motor. R. L. J.-B. Sanmori. 150,161, July 6.
Casing for washing machine or the like. R. K. Kinoshita. 150,140, July 6.
Chafing dish. D. C. O'Connell. 150,157, July 6.
Chaise longue. W. W. Vincent, Jr. 150,176, July 6.
Churn. J. P. Dasey. 150,115, July 6.
Cigarette humidor or the like. P. B. Walters. 150,179, July 6.
Clamp, I-beam. W. T. Graham. 150,131, July 6.
Combined bracelet and watch casing. M. Geduldig. 150,127–9, July 6.
Combined handle and teething ring or similar article. M. Davis. 150,114, July 6.
Container for adhesive tape or the like. H. I. Salsbury. 150,160, July 6.
Curler, Hair. J. H. Atwood. 150,105, July 6.
Display device. H. Seaman. 150,162, July 6.
Earring and barrette, Combined. A. Wraslowsky. 150,185, July 6.
Earring or similar article. M. Chernow. 150,109, July 6.
Embroidered trimming. M. S. Loeb. 150,144, July 6.
Faucet or similar article. W. W. Cushman. 150,112, July 6.
Fish lure. J. M. Cole. 150,110, July 6.
Fixture, Lighting. A. L. Arenberg and E. C. Zimmerman. 150,104, July 6.
Flatiron cradle. N. N. Skaredoff. 150,164, July 6.
Frame or similar article, Bag. B. Blacher. 150,107, July 6.
Grill guard for automobile radiators. H. Phillips. 150,158, July 6.
Hair trimmer. C. P. Zurlinden. 150,189, July 6.
Hangar, Airplane. D. R. Younger. 150,167–8, July 6.
Heat applicator for human use. J. W. Gardner. 150,125, July 6.
Helicopter. A. M. Young. 150,186, July 6.
Holder, Match box. C. H. Stockton. 150,169, July 6.
Holding pin. B. Elkins. 150,116, July 6.
Hourglass frame or similar article. C. Fischett. 150,124, July 6.
Knife, Safety. H. E. Crum. 150,111, July 6.
Locomotive body. J. Markestein. 150,148–53, July 6.
Machine for vending cigarettes or the like. F. L. Meagher. 150,154, July 6.
Musical instrument or similar article. J. Green. 150,132, July 6.
Phonograph tone arm or the like. J. B. Federico. 150,117–23, July 6.
Pulpit. H. J. Taselaar. 150,170–4, July 6.
Rack, Cigarette. H. Thomas. 150,175, July 6.
Radio receiver cabinet. N. Bel Geddes. 150,126, July 6.
Radio receiver with timed automatic station selector and tuner. J. Lolli and G. Papitto. 150,145, July 6.
Scale indicator. L. D. Singleton. 150,163, July 6.
Scissors. G. J. Staab. 150,166–7, July 6.
Showerhead or similar article. W. W. Cushman and R. H. Hansen. 150,113, July 6.
Slipper or similar article, Bedroom. J. N. Walters. 150,178, July 6.
Stand and perfume bottles, Combined. L. Hollett. 150,138, July 6.
Stand, Smoking. O. Mankki. 150,147, July 6.
Sweater. B. A. Wiechmann and F. W. Robson. 150,182–4, July 6.
Table. J. Mont. 150,155, July 6.
Tablecloth or similar article. G. Sklar. 150,165, July 6.
Target. B. Weaver. 150,180, July 6.
Television lens and mounting means therefor, Combination. J. F. Hecht. 150,136, July 6.
Toaster. L. Guild. 150,134, July 6.
Tool, Combination. M. C. Neil. 150,156, July 6.
Toothbrush holder. L. D. Greenawald. 150,133, July 6.
Vehicle for children, Double seated. J. L. Baker. 150,106, July 6.
Wall plaque. P. T. Gordon. 150,130, July 6.
Weighing and measuring device, Combined. H. I. Mandolf and J. B. Morrow. 150,146, July 6.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 6TH DAY OF JULY, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasion-resistant polymers and preparing same. E. H. Kroeker and W. J. Croxall. 2,444,855, July 6.
Acetals and mercaptals of aldehydes having two vicinal mercapto groups and their self-condensation polymers and preparing same. A. A. Pavlic. 2,444,625, July 6.
Acetophenone, Production of. W. S. Emerson and V. E. Lucas. 2,444,816, July 6.
Acetylene tetrachloride, Production of. A. H. Maude. 2,444,661, July 6.
Adhesive sheet and making. W. Kellgren, H. J. Tierney, and R. G. Drew. 2,444,830, July 6.
Adjustable shoring support. J. W. Keffer. 2,444,705, July 6.
Air conditioning apparatus, Automotive. G. E. Seldon. 2,444,537, July 6.
Air conditioning unit, Absorption type portable. C. C. Coons. 2,444,694, July 6.
Album, Strip print. C. Scharf. 2,444,853, July 6.
Alkylated silanes, Preparation of. R. N. Meals. 2,444,784, July 6.
Alpha beta dimethylene succinonitrile. P. O. Tawney. 2,444,882, July 6.
Animated motion pictures, Producing. D. Crockwell. 2,444,729, July 6.
Announcing machine and system. J. L. Franklin. 2,444,818, July 6.
Annunicator drop, Electric. F. A. Stearn. 2,444,476, July 6.
Antenna array. H. G. Busignies. 2,444,425, July 6.
Anti-icer, Propeller. E. D. Eaton. 2,444,557, July 6.
Apparatus for coating tubes. H. A. Leet and C. W. Sectish. 2,444,572, July 6.
Apparatus for freezing and storing foods. C. A. Baker. 2,444,439, July 6.
Apparatus for grinding the surfaces of grooved rolls. H. A. Thorngren. 2,444,793, July 6.
Apparatus for handling mattresses. F. E. Kaining and R. E. Mathewson. 2,444,776, July 6.
Apparatus for heating oil wells and pumping oil therefrom. R. M. Steffen. 2,444,754, July 6.
Apparatus for oil sand heating. R. M. Steffen. 2,444,755, July 6.
Apparatus for operating two oars with one hand. J. G. Snip. 2,444,683, July 6.
Apparatus for playing baseball games. C. Lenbom. 2,444,516, July 6.
Apparatus for progressively heating oil sands surrounding oil wells. R. M. Steffen. 2,444,756, July 6.
Apparatus for surface conditioning wires and the like. N. H. Nye and W. E. Rogers. 2,444,523, July 6.
Apparatus for welding tubing. W. Kopec. 2,444,778, July 6.
Arc welding, High-speed. G. G. Landis and N. J. Hoenle. 2,444,834, July 6.
Aromatics by thermal cracking, Production of. R. M. Shepardson and R. L. Mathiasen. 2,444,855, July 6.
Article forming apparatus. J. Stastny. 2,444,757, July 6.
Auto chain. L. P. Morton. 2,444,462, July 6.
Backlash eliminator for planetary gears. G. D. Gillett. 2,444,734, July 6.
Bag. J. Johnsson. 2,444,891, July 6.
Bag and making the same. H. F. Waters. 2,444,762, July 6.
Bag comprising hingedly connected opposed sections, Traveling. A. Kaufmann. 2,444,511, July 6.
Ballast unit for fluorescent lamp lighting apparatus. M. Nathanson. 2,444,522, July 6.
Balloon apparatus and parachute associated therewith. L. P. Frieder and W. S. Finken. 2,444,642, July 6.
Bank, Savings. J. I. Houck. 2,444,611, July 6.
Beacon receiver means. D. D. Grieg, A. Frum, and L. Dubin. 2,444,439, July 6.
Bearing for rock bits. R. W. Brown. 2,444,724, July 6.
Belt, Power transmission. G. H. Stewart and E. R. Traxler. 2,444,583, July 6.
Billfold with secret compartment. A. A. Seamon. 2,444,581, July 6.
Blowpipe apparatus. E. Meincke and H. T. Smith. 2,444,900, July 6.
Blowpipe apparatus for thermochemically removing metals. E. Meincke and J. M. Elsman. 2,444,899, July 6.
Bolt rethreading apparatus. G. C. Hardie. 2,444,602, July 6.
Bomb release system, Radio. R. C. Sanders, Jr. 2,444,678, July 6.
Bootee. E. E. Grimm. 2,444,822, July 6.
Bottle cap. R. Krasberg. 2,444,779, July 6.
Box: *See*—
Sealed box.
Brace, Drop-foot. R. F. Markkula. 2,444,839, July 6.
Braiding machine. O. F. Goepfert. 2,444,436, July 6.
Brake: *See*—
Reverse brake.
Brassieres and foundation garments, Shoulder strap combination for. A. D. Cleasby. 2,444,806, July 6.
Bridge, Impedance. W. H. Gille and J. V. Sigford. 2,444,733, July 6.
Brush assembly for dynamoelectric machines. R. Happe. 2,444,826, July 6.
Burner: *See*—
Hydroxylating pot type Safety gas burner.
hydrocarbon burner.
Butadiene and catalyst therefor, Production of. G. W. Seymour and F. Forteas. 2,444,538, July 6.
Button, Push. S. Brantingson. 2,444,552, July 6.
Cable adjuster. C. Melidoni. 2,444,748, July 6.
Calculator, Aircraft load. C. F. Comstock. 2,444,693, July 6.
Can bodies, Method and machine for making. J. F. Peters. 2,444,466, July 6.
Can bodies, Producing. R. E. J. Nordquist. 2,444,463, July 6.
Cap: *See*—
Bottle cap.
Card feeding mechanism. E. H. Grogan. 2,444,504, July 6.
Carton assembling machine. L. E. La Bombard. 2,444,515, July 6.
Carton structure, Hollow-walled. J. D. Clarke. 2,444,497, July 6.
Case: *See*—
Tooth paste and brush case.
Catalyst of fibrous asbestos, Producing a. L. L. Shreir. 2,444,896, July 6.
Catalytic cracking of hydrocarbons. C. L. Thomas. 2,444,545, July 6.
Centering device. R. H. Fay. 2,444,559, July 6.
Chain: *See*—
Auto chain.
Conveyor chain.
Tire chain.
Chain securing device, Antiskid. S. Kostelny. 2,444,513, July 6.
Chain tool. J. A. Kellgren. 2,444,450, July 6.
Change-speed mechanism. W. B. Barnes. 2,444,691, July 6.
Chewing gum base. W. P. Cohoe. 2,444,871, July 6.
Chime switch. M. F. Miller. 2,444,576, July 6.
Chuck. J. H. Richardson. 2,444,531, July 6.
Cinematographic optical printer having a toothed register belt. G. F. Rackett. 2,444,786, July 6.
Circuit: *See*—
Electronic control circuit.
High-frequency tuned amplifying circuit.
Protective circuit.
Voltage regulator circuit.
Circuit control apparatus. C. E. Mosley. 2,444,745, July 6.
Circuits, Pulse generating. H. W. Lord. 2,444,782, July 6.
Clamp: *See*—
Rail flange clamp.
Clamp for frictionally held multiple surfaces, Unitary. P. L. Bush. 2,444,727, July 6.
Cleaner: *See*—
Drill pipe cleaner.
Reverse flow cleaner.
Cleaning device, Teeth. A. L. Dobbins. 2,444,638, July 6.
Clip: *See*—
Hair clip.
Clock with visible and audible alarm means. A. J. Parisal. 2,444,748, July 6.
Closure fastener. A. T. Fisher. 2,444,501, July 6.
Closure fastener. J. J. Xenakis. 2,444,716, July 6.
Closures for tubular containers, End. B. Bogoslowsky. 2,444,722, July 6.
Clothesline holder. A. J. Meronk. 2,444,841, July 6.
Clothesline support. N. L. Petersen. 2,444,870, July 6.
Clutch for controlling shifting of gear ratios of transmissions, Torque responsive. C. H. Richards. 2,444,530, July 6.
Coil and core arrangement. H. E. Somes. 2,444,475, July 6.
Coin packaging device. E. C. Carruthers. 2,444,804, July 6.
Collapsible garment frame. S. Samuel. 2,444,535, July 6.

Color photographic process. H. P. Husek. 2,444,567, July 6.
Combination calendar and memorandum pad holder. E. A. Haveles. 2,444,647, July 6.
Composition of matter. V. N. Ipatieff and V. Haensel. 2,444,509, July 6.
Condenser: *See*—
Electrolytic condenser.
Connector: *See*—
Electrical connector.
Connector. D. J. Macpherson, P. A. Lefebvre, and W. Escott. 2,444,459, July 6.
Connector plug. L. J. Irrgang. 2,444,739, July 6.
Consistency of paper making stocks, Method of and apparatus for providing a response to the. E. A. Poirier. 2,444,668, July 6.
Container: *See*—
Easy opening metal container. Frozen-food container.
Container and pack therefor, Inflatable. M. J. Sturtevant. 2,444,850, July 6.
Container closures, Making. C. Hammer. 2,444,506, July 6.
Containers for transplanted nursery stock, Machine for preparing. J. L. Moesholder. 2,444,744, July 6.
Contour forming machine having a pivoted bender with metal blank attached. C. J. Bath. 2,444,718, July 6.
Control knob and associated structure. T. G. Aitcheson. 2,444,485, July 6.
Control means for maintaining constant temperature of liquids. E. E. Bergman. 2,444,416, July 6.
Conveyor chain. J. A. Crowley, Jr., and W. D. Macgeorge. 2,444,812, July 6.
Cooker with thermostatic boiler control, Steam. C. C. Young and D. F. Troupe. 2,444,587, July 6.
Copolymers of butadiene-1,3 and alpha aryl acrylonitriles. A. M. Clifford. 2,444,870, July 6.
Copolymers of vinyl furane and alpha-alkyl acrylonitrile A. M. Clifford. 2,444,807, July 6.
Cord supporting device. W. Aab. 2,444,800, July 6.
Coupling: *See*—
Fluid coupling. Magnetic coupling.
Coupling. E. J. Baumgardner. 2,444,885, July 6.
Coupling. G. M. Kelly. 2,444,892, July 6.
Coupling device. E. M. McElhinney. 2,444,575, July 6.
Coupling device. F. M. Orain. 2,444,666, July 6.
Coupling for tubes. J. N. Wolfram. 2,444,622, July 6.
Coupling thread locking means. O. J. Poupitch. 2,444,847, July 6.
Coupling with fluid-supported packing, Flexible pipe. F. M. Allen and C. B. Taylor. 2,444,868, July 6.
Crane, Power-actuated. R. G. Le Tourneau. 2,444,835, July 6.
Crimping device, Pie. D. W. Smith. 2,444,857, July 6.
Crystal plate and fabricating same. G. J. Bokeny. 2,444,500, July 6.
Cup for master pistons, Packing. M. Katcher. 2,444,569, July 6.
Curtain and making same. R. S. Temko and A. Katz. 2,444,883, July 6.
Cylinder construction. M. F. Meinertz. 2,444,662, July 6.
Damping mechanical vibratory devices. A. L. W. Williams and D. R. Christian. 2,444,820, July 6.
Decorating machine, Stencil. B. Martin. 2,444,574, July 6.
Deodoriser for toilet bowls. F. Grinham. 2,444,441, July 6.
Detaching system. F. L. Crockett. 2,444,554, July 6.
Detection and communicating system, Obstacle. E. Labin. 2,444,452, July 6.
Detergent briquette. J. D. MacMahon. 2,444,836–7, July 6.
Determining the magnitude of a condition, Method and apparatus for. W. H. Bussey. 2,444,726, July 6.
Device for rotary drum filters, Scraping. C. L. Peterson. 2,444,466, July 6.
Device for use in determining photographic exposures. D. W. Norwood. 2,444,464, July 6.
Diaphragm applicator. M. W. Prather. 2,444,672, July 6.
Dirigible headlight device. E. J. Potts. 2,444,846, July 6.
Dispersion of a rubbery material into a sheet, Method and apparatus for continuously transforming a. W. F. Bixby. 2,444,626, July 6.
Display package. E. C. Mulnix. 2,444,709, July 6.
Divider, Self-synchronous frequency. G. Hite and G. E. Whitham. 2,444,890, July 6.
Door for enclosures, Latching. W. E. Swenson. 2,444,543, July 6.
Door lock. J. B. Freysinger. 2,444,819–20, July 6.
Drier: *See*—
Hair drier.
Drill pipe cleaner. G. A. Kennedy and C. O. Moore. 2,444,653, July 6.
Drinking appliance for birds and animals. R. E. Gibbes. 2,444,772, July 6.
Drive for counter numeral wheels. H. J. Lawrence and M. M. Hennessy. 2,444,570, July 6.
Dry cell with sealing means. A. F. Rock. 2,444,616, July 6.
Dryer: *See*—
Drier.
Drying method. R. Bassinger and O. A. Wright. 2,444,588, July 6.
Duct. Current distribution. J. G. Jackson and R. H. Kingdon. 2,444,648, July 6.
Dump vehicle. G. E. Coats. 2,444,808, July 6.
Easy opening metal container. J. Coyle. 2,444,591, July 6.
Educational game device. H. O. Eby. 2,444,706, July 6.
Eductor. A. E. Reinhardt. 2,444,615, July 6.
Electric circuit breaker. A. C. Boisseau and E. S. Beall. 2,444,765, July 6.
Electrical bridge and galvanometer circuits. C. Anderson. 2,444,624, July 6.
Electrical coil. H. P. Heath. 2,444,737, July 6.
Electrical connector. G. H. Erb. 2,444,483, July 6.
Electrical generating unit, Emergency. C. A. Besson. 2,444,415, July 6.
Electrical heater for liquid cooled engines. R. L. P. Braun and S. Urbant. 2,444,627, July 6.
Electrical plug and socket connector with retractable contacts. H. J. Modrey. 2,444,843, July 6.
Electrical switch. L. M. Paster. 2,444,529, July 6.
Electrical synchronizing control system. H. Whalley and G. Shand. 2,444,796, July 6.
Electrode adapter. W. E. Wilson. 2,444,798, July 6.
Electrode, Ph-responsive glass. G. A. Perley. 2,444,845, July 6.
Electrode structure for multigrid electron discharge tubes. J. L. H. Jonker. 2,444,740, July 6.
Electrolytic condenser. J. Burnham. 2,444,725, July 6.
Electron discharge device utilising cavity resonators. A. F. Pearce and N. C. Barford. 2,444,749, July 6.
Electron tube with external anode. A. K. Wing, Jr. 2,444,482, July 6.
Electronic control circuit. S. G. Inserstedt. 2,444,568, July 6.
Elongated metal stock while under tension, Method and apparatus for contouring. C. J. Bath. 2,444,719, July 6.
Engine: *See*—
Heat engine.
Internal-combustion engine.
Engine mounting for adjustable conveyors. S. A. Mulkey and R. Furlong. 2,444,521, July 6.
Equation computer, Polynomial. J. M. Anderson. 2,444,549, July 6.
Evaporator foam control apparatus. W. B. Leaf. 2,444,454, July 6.
Evaporator, Refrigerant. R. M. Hall. 2,444,624, July 6.
Expander in apparatus for attaching couplings to hose, Readily detachable. E. H. Hansen. 2,444,601, July 6.
Expanding cake holder. J. R. Lathan and M. H. Comer. 2,444,780, July 6.
Extruding apparatus. K. B. Kilborn. 2,444,831, July 6.
Faceting head. L. M. Weir. 2,444,795, July 6.
Fastener: *See*—
Closure fastener.
Filament support. A. K. Wing, Jr. 2,444,483, July 6.
Films, Light polarizing polyvinyl orthoborate. F. K. Signaigo. 2,444,712, July 6.
Filter: *See*—
Infrared radiation filter.
Fish bait, Mechanical. C. D. Mather. 2,444,707, July 6.
Fishing line float. L. R. Stahnke and W. H. Lannert. 2,444,791, July 6.
Flint. A. F. Reilly. 2,444,849, July 6.
Flow control device. R. A. Rosenblum. 2,444,677, July 6.
Fluid coupling. E. M. Anderson, B. O. Kelso and C. M. Ginn. 2,444,414, July 6.
Fluid coupling. H. O. Kelso. 2,444,451, July 6.
Fluid handling system for automatic cleansing apparatus. P. E. Geldhof and L. Ringer. 2,444,645, July 6.
Fluid pressure device. H. E. Somes and R. R. Purvin. 2,444,474, July 6.
Flume. W. E. Wilson. 2,444,688, July 6.
Food preserving. E. A. Hayes. 2,444,875, July 6.
Food-storage cabinet for use in conjunction with refrigerators, Supplemental. R. B. Wyeth. 2,444,887, July 6.
Foot control accessory for drill presses. J. W. Fried. 2,444,562, July 6.
Frame: *See*—
Collapsible frame.
Frame for automatic printing machines, Contact printing. E. H. Grogan. 2,444,505, July 6.
Frame mounting flexible sheet-like materials. H. A. Marsh. 2,444,520, July 6.
Frequency control of magnetron oscillators. J. B. Fisk. 2,444,435, July 6.
Frequency modulated pulse generator. B. Trevor. 2,444,479, July 6.
Frozen-food container. C. R. Symmes. 2,444,861, July 6.
Fruit process. K. K. Newsom. 2,444,579, July 6.
Furnace: *See*—
Smelting furnace.
Furnace. R. E. Christian and A. W. Widerstedt. 2,444,805, July 6.
Furnace with flue cleaner, Heat conserving air heating. F. H. Elliott. 2,444,499, July 6.
Gage: *See*—
Gauge.
Garment, Child's sleeping. G. E. Joyce. 2,444,652, July 6.
Garment, Emergency rain. V. E. Walston. 2,444,761, July 6.

Garment. Foundation. H. G. Karcher. 2,444,829, July 6.
Gas cock, Safety. R. B. Baldwood. 2,444,880, July 6.
Gas filled tube. H. G. Dunignes and L. A. de Rosa. 2,444,427, July 6.
Gauge: *See*—
Multiple diameter gauge.
Gear-cutting machine. O. F. Bauer. 2,444,551, July 6.
Gearing, Adjustable. J. T. Gondek. 2,444,775, July 6.
Generation system. W. E. Wood and E. E. Gandet. 2,444,799, July 6.
Generator: *See*—
Frequency modulated pulse generator.
Glass to form sheets, Rolling of. M. L. Devol. 2,444,731, July 6.
Goggle with detachable lens. C. W. Cochran. 2,444,496, July 6.
Grid for fluid fuel stoves. E. J. Thomen. 2,444,862, July 6.
Grout projecting apparatus. J. M. Crom. 2,444,811, July 6.
Guide for correcting typewriting. R. L. Pyner. 2,444,673, July 6.
Gumming machine. W. C. Marsh. 2,444,878, July 6.
Gun battery with ammunition feed means. J. C. Trotter. 2,444,884, July 6.
Gun counter-recoil assist mechanism. F. F. Buau. 2,444,852, July 6.
Gunsight. E. C. Neal. 2,444,844, July 6.
Gyro. Operating electron. J. Hillier. 2,444,700, July 6.
Hair clip. A. Linder. 2,444,519, July 6.
Hair drier. T. W. Watkins. 2,444,481, July 6.
Handle: *See*—
Service handle.
Handle for utensils, Hinged. W. Josselyn. 2,444,447, July 6.
Hanger: *See*—
Pipe hanger. Polish rod hanger.
Harvester, Corn. R. C. Fergason. 2,444,561, July 6.
Head spacing apparatus for container closing machines. W. C. Fromer. 2,444,502, July 6.
Heat engine. E. G. Baker. 2,444,764, July 6.
Heat exchange element. F. R. Higley. 2,444,825, July 6.
Heat transfer media. W. H. Daudt. 2,444,855, July 6.
Heater for flowing fluid, Electric. P. P. Horni. 2,444,509, July 6.
Heel adapter, Spring. J. P. Warrington. 2,444,865, July 6.
Heel for footwear. A. H. Kernagood. 2,444,777, July 6.
Height computing apparatus. G. W. Eyler. 2,444,770–1, July 6.
Helicopter, Axial flow. L. H. Leonard. 2,444,781, July 1.
High-frequency electronic device. R. J. Bondley. 2,444,416, July 6.
High-frequency tuned amplifying circuit. A. Van Der Ziel and M. J. O. Strutt. 2,444,864, July 6.
Hitch or clevis. G. L. Kuhl. 2,444,876, July 6.
Holder: *See*—
Clothesline holder. Metal lens holder.
Combination calendar and memorandum holder. Nursing bottle holder. Welding electrode holder.
Expanding cake holder.
Holder for multicolor printings, Stencil and work. H. Summer. 2,444,860, July 6.
Hosiery drying table. A. S. Mann and H. Campbell. 2,444,783, July 6.
Hot top, Sectional. E. Marburg. 2,444,838, July 6.
Hydraulic power pack unit. B. N. Ashton. 2,444,550, July 6.
Hydrocarbons and apparatus therefor, Cracking. G. L. Johnson and W. A. Hagerbaumer. 2,444,850, July 6.
Hydroxylating pot type hydrocarbon burner. J. L. Breese. 2,444,494, July 6.
Ice-cream cutting and discharging device. H. A. Alheit. 2,444,486, July 6.
Illuminating and trimming paper. E. F. Bowen. 2,444,723, July 6.
Implement, Cleaning. J. H. Stillbach. 2,444,758, July 6.
Indicator: *See*—
Rate of turn indicator. Tire deflation indicator.
Inflation. F. B. Allen. 2,444,717, July 6.
Infrared radiation filter. E. R. Blout and W. F. Amon, Jr. 2,444,492, July 6.
Inking mechanism for printing machines. F. Lamatsch. 2,444,656, July 6.
Instrument for navigation. P. Mosner and O. Steinitz. 2,444,708, July 6.
Insulating and dielectric materials, Preparing. F. M. Clark. 2,444,766, July 6.
Intermittently rotatable electric motor. M. M. Hennessy and H. J. Lawrence. 2,444,566, July 6.
Internal-combustion engine. S. W. Briggs and R. C. Porter. 2,444,628, July 6.
Internal-combustion engine. E. Griesbaber and K. V. Anderson. 2,444,440, July 6.
Internal-combustion engine. A. L. Oberbeck and J. Martin. 2,444,665, July 6.
Internal-combustion engine fuel charges, Method and apparatus for forming. R. C. Porter. 2,444,670, July 6.
Iron or steel, Producing aluminum-coated. V. H. Bradford. 2,444,422, July 6.
Isopropylidene-*p*-phenoxy-2-ethanol-*p*-phenoxyacetic acid. H. M. Day and D. W. Jayne, Jr. 2,444,594, July 6.
Jack and tightener, Chain. J. H. Weed. 2,444,866, July 6.
Ketogulonic acid and its esters, Producing. P. J. van der Laan. 2,444,885, July 6.
Lamp and the like, Incandescent. R. K. Braunsdorff. 2,444,422, July 6.
Light: *See*—
Portable light.
Lighter, Pipe and cigarette. W. J. Miller, Jr. 2,444,663, July 6.
Linkage for bracelets and watch bracelets, Expansible. J. J. Vastano. 2,444,684, July 6.
Liquid-tight envelope bags, Multiple fabrication method and apparatus for. H. F. Waters. 2,444,685, July 6.
Lithium base greases, Manufacture of. J. A. Bell. 2,444,720, July 6.
Lock: *See*—
Door lock.
Lock for guns, Trigger safety. C. E. Jacobs. 2,444,649, July 6.
Lock for holding table legs. F. D. Chick. 2,444,632, July 6.
Locking and unlocking mechanism for cylinder locks. G. E. Swanson. 2,444,642, July 6.
Low humidity meter. H. R. McCombie and C. D. Wilder. 2,444,613, July 6.
Machine for forming materials. G. D. Bechton, D. J. Ward, and J. H. Watson. 2,444,787, July 6.
Machine tool. F. E. Munschauer. 2,444,664, July 6.
Magnetic coupling. W. D. Williams. 2,444,797, July 6.
Magnetic materials according to their residual magnetism, Method and apparatus for sorting. K. L. Scott. 2,444,751, July 6.
Magnetron. R. J. Bendley. 2,444,419, July 6.
Mailbox. A. J. Shaukin. 2,444,679, July 6.
Mask, Oxygen. H. R. Bierman. 2,444,417, July 6.
Mechanically simulating genuine oil paintings. I. Tornberg. 2,444,863, July 6.
Metal lens holder. G. W. Marks, F. Cossey, and R. S. Mills. 2,444,457, July 6.
Metal rectifier element. H. S. Denmark. 2,444,430, July 6.
Metals on a support by thermal evaporation in a vacuum, Process and apparatus for depositing. P. Alexander. 2,444,763, July 6.
Meter: *See*—
Low humidity meter.
Meter for photoelectric exposure determining devices, Multiple light baffle brightness. K. Rath. 2,444,674, July 6.
Methyl ethyl ketone from azeotropic distillates by extraction with tetraethylene glycol, Recovery of. G. R. Lake. 2,444,893, July 6.
Modulating system. D. D. Grieg. 2,444,437, July 6.
Mold for freezing liquids and semi-liquids. R. M. Storer. 2,444,792, July 6.
Molds and cores, Conditioning refractory for making. B. M. Weston. 2,444,413, July 6.
Monoesters of dicarboxylic acids, Preparation of. H. J. Hagemeyer, Jr. 2,444,735, July 6.
Motor: *See*—
Intermittently rotatable electric motor. Variable-speed motor.
Motor synchronizing system, Electric. F. C. Wallace. 2,444,480, July 6.
Mount, Binocular. W. B. Larson. 2,444,453, July 6.
Mounting: *See*—
Propeller mounting. Seat mounting.
Mover, Earth. L. L. Hyler. 2,444,612, July 6.
Mucilages and producing same, Mannogalactan. J. W. Swanson. 2,444,412, July 6.
Multiple diameter gauge. S. G. Johnson. 2,444,702, July 6.
Multiple selection pattern mechanism. C. F. Miller. 2,444,894, July 6.
Navigational method and apparatus. J. Neufeld. 2,444,578, July 6.
Necktie accessory. C. E. Wiebe. 2,444,548, July 6.
Nickel electrode for welding cast iron. T. E. Kihlgren. 2,444,654, July 6.
Nitriles, Manufacture of. W. Kaplan. 2,444,828, July 6.
Nitromethane-acetone-adipic acid condensation polymer. A. Johnson. 2,444,827, July 6.
Nozzle, Blowpipe. P. R. Aronson. 2,444,487, July 6.
Nursing bottle holder. C. Tubiolo. 2,444,585, July 6.
Nutcracker with reciprocating jaw, Hand operated. E. L. Daniel. 2,444,634, July 6.
Obturator for ordnance. A. Crossley. 2,444,633, July 6.
Oil burner for tobacco drying and curing means. W. B. Dowless. 2,444,814, July 6.
Oil temperature control valve. J. C. Shaw. 2,444,711, July 6.
1,3-diene copolymers with mono-substituted thioureas, Preservation of. R. R. Sterrett. 2,444,881, July 6.
Optical elements, Manufacturing reflecting. J. H. Richardson. 2,444,532–3, July 6.
Optical filter attachment. N. A. Kath. 2,444,512, July 6.
Organic acids from sour sewage sludge, Recovering. R. D. Pomeroy. 2,444,527, July 6.
Organic nitriles, Purification of. W. A. Blann. 2,444,589, July 6.
Organosilicon composition and preparing it. J. L. Speier. 2,444,358, July 6.
Overflow control for filter beds. L. L. Smith. 2,444,682, July 6.

Pack and its manufacture, Intravaginal. O. Popper and G. K. Melvill. 2,444,528, July 6.
Packing. E. Hanson. 2,444,674, July 6.
Particle size of synthetic rubber latex and forming a film therefrom, Increasing the. E. A. Willson. 2,444,689, July 6.
Particles coated with 2,2-bis(parachlorophenyl)-1,1,1-trichloroethane. E. H. Siegler. 2,444,752, July 6.
Pentoses and hexosans from wood liquors, Recovery of. H. E. Hall and L. L. Coleman. 2,444,823, July 6.
Periodic circuit breaker with a liquid conductor particularly for contact current changers. M. H. W. Widakowich. 2,444,687, July 6.
Petroleum cracking residues, Treatment of. E. Hene. 2,444,610, July 6.
Photo-electric apparatus. R. J. Herbold. 2,444,442, July 6.
Photographic developer containing disodium salts of monohydric phenol monoacids. F. E. Bean. 2,444,803, July 6.
Photographic masking using the Clayden effect. J. A. C. Yule. 2,444,867, July 6.
Pincers for the cleansing of interdental and intermolar spaces, Thread-holding. D. V. Freyre. 2,444,097, July 6.
Pipe bender with detachable side abutment member, Reversible. J. J. Doucette. 2,444,506, July 6.
Pipe hanger. J. F. Ingham. 2,444,701, July 6.
Piston ring ridge remover. B. E. Myers. 2,444,614, July 6.
Placer mining. B. Bromberg. 2,444,629, July 6.
Planetary gear unit. W. F. Kannenberg. 2,444,448, July 6.
Plastic material, Drawing and tempering. G. W. Borkland. 2,444,420, July 6.
Plating of knitting fabrics, Reverse. J. L. Getas. 2,444,503, July 6.
Playhouse. N. A. Crites. 2,444,695, July 6.
Playing piece. P. Levy. 2,444,517, July 6.
Plug: *See*—
  Connector plug.
Polish rod hanger. T. De W. McConahey and F. C. Redell. 2,444,842, July 6.
Polymerization of butadiene-1,3 hydrocarbons in acidic aqueous emulsion in the presence of a persulfate and aluminum chloride. C. F. Fryling. 2,444,643, July 6.
Polymerization of isobutylene, Continuous. R. L. Parvin. 2,444,848, July 6.
Polymerising vinyl compounds and products formed thereby. R. G. Fordyce. 2,444,817, July 6.
Portable light. J. F. Stoeck and A. J. Valrose. 2,444,540, July 6.
Poultry, Plucking. H. E. Drews. 2,444,556, July 6.
Predoped fabric, Making. B. R. Hanson. 2,444,507, July 6.
Printer for motion pictures, Continuous drum. G. F. Rackett. 2,444,785, July 6.
Printing machine. W. A. Whitehead. 2,444,547, July 6.
Projection method for measuring the inner contours of wire drawing dies. F. C. Elder. 2,444,639, July 6.
Propeller mounting. R. B. Sharpes. 2,444,539, July 6.
Protective circuit. C. E. Torsch. 2,444,902, July 6.
Protector for hats. J. V. Samuels. 2,444,617, July 6.
Pull-out device. M. W. Lewis. 2,444,518, July 6.
Pulse generation method. D. D. Grieg. 2,444,438, July 6.
Pump. C. E. Wuensch. 2,444,586, July 6.
Punch, Film. H. L. Fitch. 2,444,732, July 6.
Punch, Stencil. W. C. Marsh and H. W. Hempel. 2,444,877, July 6.
Punching machine, Oyster. L. Dickerson. 2,444,636, July 6.
Purification of raw waters. H. R. Hay. 2,444,774, July 6.
Purifying agent from steer bones, Making a. F. Leslie. 2,444,571, July 6.
Radio beacon transmitter. L. Dubin. 2,444,431, July 6.
Radio device for secret communication. A. Ptáček. 2,444,750, July 6.
Radio navigation system. E. J. Isbister. 2,444,445, July 6.
Radio range for student training, Automatic miniature. R. K. Stout, C. W. Muller, C. J. Crane, and G. V. Holloman. 2,444,477, July 6.
Rail flange clamp. A. H. Genter. 2,444,599, July 6.
Rate of turn indicator. J. E. Bevins. 2,444,625, July 6.
Receiver, Static reducing pulse. E. Labin and R. B. Hoffman. 2,444,455, July 6.
Rectifiers, Making. M. F. Skinker, L. B. Haigh, and R. O. Hall. 2,444,473, July 6.
Rectifying system. W. S. Master. 2,444,458, July 6.
Refrigerating apparatus. L. A. Philipp. 2,444,667, July 6.
Refrigerator, Two-temperature intermittently operating. A. G. Gross. 2,444,698, July 6.
Regulating apparatus. A. H. Gebauer. 2,444,563, July 6.
Regulating system for inverted rotary converter. A. Fisher. 2,444,769, July 6.
Regulation of turbosupercharged engines, Speed responsive. J. Füllemann. 2,444,644, July 6.
Remote control system. J. L. Moncrief. 2,444,460, July 6.
Repeater control system. H. G. Busignies. 2,444,426, July 6.
Resins containing alkylene sulfonate groups, Nitrogenous. R. W. Auten and J. L. Rainey. 2,444,802, July 6.
Retainer, Ball joint. J. E. Lucas. 2,444,658, July 6.
Retriever, Duck. G. W. Erickson. 2,444,597, July 6.
Reverse brake. W. K. Crecos. 2,444,582, July 6.
Reverse flow cleaner. G. H. Crammer. 2,444,809, July 6.
Roller guide, Two-way. W. F. Eckert. 2,444,432, July 6.
Rotary valve for internal-combustion engines. J. C. and M. A. de la Riestra, and W. F. Nixon. 2,444,696, July 6.
Rubber joint for couplings and the like and making the same, Bonded. J. D. Worley. 2,444,904, July 6.
Safety gas burner. G. E. Ballinger. 2,444,490, July 6.
Sailboat. W. D. Pawley, Jr. 2,444,526, July 6.
Salts of dithiocarbamic acids. R. A. Mathes. 2,444,660, July 6.
Sanding device. E. Tambini. 2,444,760, July 6.
Sauce preparation. H. Murata. 2,444,577, July 6.
Screw and nut actuating mechanism. T. W. Vickers. 2,444,886, July 6.
Seal, Electrical. P. Robinson and P. H. Netherwood. 2,444,880, July 6.
Seal for soaking pit covers. F. D. Hazen. 2,444,736, July 6.
Seal, Oil. P. W. Sloan. 2,444,901, July 6.
Seal, Package-type. C. F. Voytech. 2,444,614, July 6.
Seal, Pressed-in package type rotary. A. J. Solari. 2,444,713, July 6.
Seal, Roll-neck. S. A. Hastings and C. F. Voytech. 2,444,699, July 6.
Sealed box. W. A. Ringler. 3,444,895, July 6.
Sealed dry cell with threaded end. C. F. Deibel. 2,444,672, July 6.
Sealing machine, Box. C. Christiansen. 2,444,496, July 6.
Seam with concealed zigzag stitching, Elastic. M. Popper. 2,444,467, July 6.
Seat: *See*—
  Swing seat.
Seat mounting. F. C. Hawkins. 2,444,604, July 6.
Securing device. A. S. Goldberg. 2,444,873, July 6.
Selective solvent treatment of liquid hydrocarbon mixtures for segregation of contained aromatics. A. S. Smith. 2,444,582, July 6.
Self-loading device for shaker conveyers. L. D. Hagenbook. 2,444,600, July 6.
Service handle. A. E. Elliott. 2,444,558, July 6.
Servo control system. F. W. Cunningham. 2,444,813, July 6.
Sewing machine. H. J. Le Vesconte and A. M. Schweda. 2,444,657, July 6.
Shaping circuit for cathode beam tubes. M. C. Jones and L. E. Matson, Jr. 2,444,651, July 6.
Shelves for paper handling machinery, Adjustable feed. V. E. Pratt and G. F. Gray. 2,444,580, July 6.
Shingle. H. Abraham. 2,444,623, July 6.
Shoe for sports and the like. M. Carrier. 2,444,428, July 6.
Shoe with removable plug, Blucher type. W. H. Epstein. 2,444,640, July 6.
Shoes with a wedge heel and stiffener, Making. I. Bostock. 2,444,493, July 6.
Shovel, Tractor. R. L. Beyerstedt. 2,444,662, July 6.
Side band modulation system, Single. H. W. G. Sallinger. 2,444,534, July 6.
Sill brace and draft gear stop, Plate metal. W. F. Dietrichson and J. Christianson. 2,444,637, July 6.
Singeing apparatus and method. R. E. Coue. 2,444,553, July 6.
Slide fastener machine. S. Loew. 2,444,706, July 6.
Sliding game piece. L. P. Creasy. 2,444,510, July 6.
Smelting furnace. D. Giles. 2,444,646, July 6.
Solenoids, magnets, and coils, and the protection of the winding thereof, Manufacture and construction of. O. L. Price. 2,444,469, July 6.
Sound recording and reproducing control system. F. W. Roberts and R. C. Curtis. 2,444,676, July 6.
Spectograph, Cathode-ray tube. R. Feldt and C. Berkley. 2,444,560, July 6.
Spherical and chromatic aberrations in electron lens, Correction for. E. G. Ramberg. 2,444,710, July 6.
Sponge rubber, Manufacture of. W. J. Clayton and P. V. Butsch. 2,444,869, July 6.
Spot removing machine. F. H. Castoe. 2,444,728, July 6.
Spring for focal plane shutters, Booster. R. T. Jackson. 2,444,446, July 6.
Stabilizers for photographic emulsions. N. Heimbach. 2,444,607, July 6.
Stabilisers for photographic emulsions. N. Heimbach and W. Kelly, Jr. 2,444,605–6, July 6.
Stabilisers for photographic silver-halide emulsions. N. Heimbach and R. H. Clark. 2,444,600, July 6.
Stabilizers for photographic silver-halide emulsions. N. Heimbach and W. Kelly, Jr. 2,444,608, July 6.
Statistical record cards and delivering them to a receiver, Mechanism for feeding. A. Thomas. 2,444,544, July 6.
Steel metallurgy. W. A. Brown and F. S. Kleeman. 2,444,424, July 6.
Steel strip tempering. A. T. Reichenbach. 2,444,788, July 6.
Stereoscopic mapping instrument. T. M. Edison. 2,444,515, July 6.
Stop for business machines, Adjustable paper. A. J. Fettig. 2,444,641, July 6.

Storm window support. P. L. Newbold. 2,444,746, July 6.
Stove, Portable. S. T. Howard. 2,444,444, July 6.
Supercharging system for internal-combustion engines. A. Lysholm. 2,444,456, July 6.
Support: *See*—
  Adjustable shoring support.
  Clothesline support.
  Storm window support.
  Chime support.
Support for article holders, Universal. E. M. Strickland. 2,444,541, July 6.
Support for crucibles and ladles. R. E. Morey and R. C. Wayne. 2,444,461, July 6.
Support for submerged area surveying. J. C. Pollard and C. F. Sellers. 2,444,669, July 6.
Surface covering, Linoleum type. P. O. Powers. 2,444,468, July 6.
Swing seat. N. J. Seamster. 2,444,618, July 6.
Switch: *See*—
  Electrical switch.
Switch. D. Samiran and G. W. Replogle. 2,444,471, July 6.
Switch with thermostatic safety release, Terminal. D. W. Scofield. 2,444,680, July 6.
Synthesis of N-aryl-maleimides. N. E. Searle. 2,444,536, July 6.
Synthetic rubber latices, Creaming of. E. Arundale. 2,444,801, July 6.
Table: *See*—
  Hosiery drying table.
Tachometer and accelerometer, Combined. T. W. Brown. 2,444,630, July 6.
Tall oil, Solvent fractionation of. L. O. Cummings and H. A. Vogel. 2,444,730, July 6.
Tank with sludge removal means therefor, Liquid treatment. F. D. Prager. 2,444,671, July 6.
Tape or sheet, Composite flexible moistureproof wrapping. C. F. Hesselroth. 2,444,443, July 6.
Tappet-actuating member. A. Chase. 2,444,495, July 6.
Telegraph signal recorder, Facsimile. R. J. Wise and E. D. Parrott. 2,444,484, July 6.
Television amplifier. K. Schlesinger. 2,444,854, July 6.
Temperature control for refrigerated open-top display cases, Automatic. R. E. Davis. 2,444,593, July 6.
Temperature measuring system with maximum or minimum selector. J. P. Boston. 2,444,421, July 6.
Terpene isomerisation. A. L. Rummelsburg. 2,444,700, July 6.
Tetrachlorobutyronitrile. J. W. Teter and O. W. Bauer. 2,444,478, July 6.
Thrust balancing means. W. G. Lundquist. 2,444,659, July 6.
Ticket feeding and printing mechanism, Cash register. M. A. Goodbar and G. A. Cocup. 2,444,564, July 6.
Tile-sawing machine. W. C. Eyles and C. E. Hyatt. 2,444,598, July 6.
Time control for photographic printing apparatus, Exposure. K. Rath. 2,444,675, July 6.
Timing device, Electrical. C. H. Smith and H. Lindars. 2,444,619, July 6.
Tire chain. R. A. Mank. 2,444,573, July 6.
Tire dedation indicator. P. Siever. 2,444,856, July 6.
Tire recapping machine. M. D. Butterfield. 2,444,898, July 6.
Toaster. S. G. Isserstedt. 2,444,510, July 6.
Tool: *See*—
  Chain tool.
  Machine tool.
Toolholder. H. C. Wilson. 2,444,621, July 6.
Tooth paste and brush case. B. F. Aschemeier. 2,444,488, July 6.
Torch, Heating and brazing. M. L. Rogers. 2,444,850–1, July 6.
Track brake for kiln cars and the like. L. D. Ferguson. 2,444,500, July 6.
Transmitter and receiver, Pulse type telegraph. C. R. Cleeton. 2,444,429, July 6.
Transporting and lowering apparatus, Burial vault. C. E. Almendinger and E. L. Behrens. 2,444,690, July 6.
Tray and grid, Ice cube. D. H. Reeves. 2,444,789, July 6.
Tray and support structure, Sloping bottom. L. P. Touchett. 2,444,584, July 6.
Tray, Butter. H. P. Keefer. 2,444,704, July 6.
Tube: *See*—
  Gas filled tube.
Tube-ice machine using compressor to reverse pressure, B. F. Kubaugh. 2,444,514, July 6.
Tuning controls for radio apparatus and the like, Automatic. R. W. May. 2,444,840, July 6.
Turbine, Gas. M. Lutjen. 2,444,742, July 6.
Utensil, Cooking. A. N. Smith. 2,444,753, July 6.
Utensil, Culinary. F. G. Shrout. 2,444,681, July 6.
Valve: *See*—
  Oil temperature control valve.
Valve and control, Mixer. T. B. Chace. 2,444,631, July 6.
Valve assembly. H. R. Jones. 2,444,703, July 6.
Valve stem. C. H. Kearny. 2,444,449, July 6.
Vaporous reactants from catalyst used in hydrocarbon conversion, Removing. R. W. Krebs. 2,444,832, July 6.
Variable-speed mechanism. C. H. Richardson. 2,444,470, July 6.
Variable-speed motor. B. R. Gerulis and H. Garvelink. 2,444,821, July 6.
Vehicle: *See*—
  Dump vehicle.
Vehicle, Wheeled. B. A. Swennes. 2,444,759, July 6.
Velocity modulation discharge tube apparatus. E. Feenberg. 2,444,434, July 6.
Vending machine, Coin-controlled. F. Niewoehner. 2,444,747, July 6.
Visor. M. Parrish, Jr. 2,444,524, July 6.
Voltage regulating transformer. A. H. B. Walker. 2,444,715, July 6.
Voltage regulator circuit. A. H. Schooley. 2,444,472, July 6.
Voltage stabilising system. J. A. Uttal and T. T. Short. 2,444,794, July 6.
Vulcanization of chloroprene elastomers in the presence of dinitrosobensene and catechol. R. H. Walsh. 2,444,546, July 6.
Vulcanising. W. H. Van Buren. 2,444,903, July 6.
Walls, Covering. L. W. Holmes. 2,444,738, July 6.
Warning device. Truck. T. H. Dennis, Jr. 2,444,635, July 6.
Warp beam compressor device. F. B. Javery. 2,444,775, July 6.
Washer assembly unit. R. S. and K. Doerr. 2,444,595, July 6.
Washing implement, Clothes. C. V. Berry. 2,444,491, July 6.
Washing machine cylinder and closure means therefor. L. M. Harvey. 2,444,603, July 6.
Wave-signal translating system. H. L. Blaisdell. 2,444,721, July 6.
Wave-signal translating system. B. D. Loughlin. 2,444,741, July 6.
Welding apparatus, Gas-arc. R. W. Cobean. 2,444,767, July 6.
Welding electrode holder. H. J. Hecht. 2,444,565, July 6.
Whipper, Cream. E. C. Brull. 2,444,897, July 6.
Wrench having thread and rack adjustments, Double adjustment. J. C. White. 2,444,686, July 6.
Zinc-lined containers, Assembling. A. J. Lampert. 2,444,833, July 6.

CLASSIFICATION OF PATENTS

ISSUED JULY 6, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Oct. 8	Dec. 7	3,755
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Music; Acoustics; Sound Recording; Knotters; Buckles, Buttons, Clasps.	Aug. 21	June 13	1,909
6. SUBLE, H., Carbon Chemistry (part)	†Aug. 1	†June 21	1,830
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†Aug. 19	†May 10	1,777
8. COBLE, A. S. (Assistant Chief), Furniture; Racks and Cabinets	Sept. 11	July 3	4,308
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	†Mar. 1	June 7	2,249
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Sept. 23	†July 21	1,710
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†Aug. 22	†Oct. 9	712
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	Oct. 16	July 26	2,077
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	Aug. 7	July 19	2,518
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Sept. 17	†June 9	1,288
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	†Feb. 17	July 26	2,005
16. LOVEWELL, N. N., Television; Telephony	†Sept. 5	†Jan. 30	1,603
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	Dec. 5	Aug. 12	2,016
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	†Jan. 13	July 19	1,946
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	†Mar. 6	Oct. 19	1,768
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	†Jan. 7	Nov. 1	1,057
21. MADER, R. C., Textiles	†July 28	†June 10	1,204
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	†May 15	Aug. 1	1,756
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	Dec. 11	July 11	1,361
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	†July 5	†July 15	2,643
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†July 19	Sept. 24	1,761
26. YOUNG, R. B., Electricity—Generation and Motive Power	†Sept. 20	Oct. 24	1,428
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	†Apr. 3	Oct. 23	2,325
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	†Apr. 14	†May 10	1,133
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	Dec. 20	July 23	2,126
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Illumination; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Sept. 18	†Mar. 10	2,467
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†Sept. 24	†Sept. 25	2,189
32. LESH, KARL E., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	Dec. 21	June 27	3,146
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	Sept. 11	June 17	3,252
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Senders; Signals and Indicators	Aug. 17	July 19	1,482
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	†Mar. 10	Sept. 10	3,070
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Sept. 13	June 28	2,068
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†June 10	†Jan. 11	1,321
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	†Mar. 17	†Mar. 5	1,938
39. WHITNEY, F. L., Fluid-Pressure Regulators; Valves; Water Distribution	Sept. 27	June 20	2,818
40. DRUMMOND, E. J., Receptacles (part); Packages	†July 19	Sept. 20	2,155
41. HERTZ, M., Recorders; Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	June 12	June 26	2,980
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	†Sept. 26	†Aug. 1	1,295
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†Aug. 5	†July 9	1,436
44. HARVEY, L. P., Refrigeration; Preserving	June 17	July 12	1,205
45. MANTER, W. E., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	Dec. 13	July 22	2,998
46. MUSHAKE, W. L., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	Dec. 14	July 17	2,982

NOTE.—The dates given are 1948 except where † indicates 1947.

(Total number of applications awaiting action, excluding Trade-Mark Operation, 134,946; Trade-Mark Operation, 41,000. Oldest new case, June 12, 1946; oldest amended, April 12, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†Sept. 10	†Mar. 14	2,121
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	†Oct. 4	Oct. 5	1,189
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	†Feb. 6	†Jan. 9	1,264
50. LEVIN, SAMUEL, Synthetic Resins	†Sept. 17	†Mar. 13	2,257

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE WHITMER ET AL.

No. 5889. Decided April 8, 1948

[— F.2d —; 77 USPQ 356]

1. PATENTABILITY—INVENTION—AFFIDAVITS OF IMPROVEMENT.

Assuming a showing by the affidavits that by experiments carried out with the use of materials within the percentage ranges defined in appellants' application, and within the time units and under the temperature degrees defined therein, a product resulted which might be more "acceptable" to the trade than products resulting from applying the process defined in one or two of the examples embraced in the reference specification, *Held* that it does not follow from this that what appellants did amounts to invention.

2. SAME—BRIGHT POLISHING OF STAINLESS STEEL.

Certain claims to a process of bright polishing stainless steel *Held* properly rejected on the ground of lack of invention over a cited prior patent.

APPEAL from the Patent Office. Serial No. 449,673.

AFFIRMED.

Richey and Watts (*Blythe D. Watts* and *Watts T. Estabrook* of counsel) for Whitmer et al.

W. W. Cochran (*B. L. Reynolds* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

Appellants here seek review and reversal of the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting all the claims, numbered 1 to 5, inclusive, of their application for patent entitled "Bright Polishing of Stainless Steel." All the claims are method claims and the introductory clause of each is "The process of bright pickling stainless steel." The rejection was on the ground of lack of invention over prior art as disclosed in a patent to James N. Ostrofsky, No. 2,435,854, issued November 30, 1948. The Examiner cited as an additional reference a publication referred to as "the Uhlig publication," but this was virtually dismissed as a reference by the Board and is not before us. As stated in the brief for appellants, "The ultimate question presented here for decision is whether or not the claims define invention over the Ostrofsky patent."

In his official statement following the appeal to the Board the Examiner reproduced all the claims. The Board selected as representative claim No. 1. We reproduce it and claim 4:

1. The process of bright pickling stainless steel which comprises the steps of making an article composed of such steel the anode in an electrolyte initially containing from about 40% to about 70% of sulphuric acid by weight and from about 5% to about 20% of tartaric acid by weight, the remainder being water, and passing thru the article and electrolyte an electric current having a density of between about 1 amp. and about 4 amps. per sq. in. of anode surface.

4. The process of bright pickling stainless steel which comprises the steps of making an article composed of a stainless steel of the 18–8 type the anode in an electrolyte initially containing from about 40% to about 70% of sulphuric acid by weight and from about 5% to about 20% of tartaric acid by weight, the remainder being water, passing thru said article and said electrolyte an electric current having a density of between about 1 amp. and about 4 amps. per sq. in. of anode surface for a period of time ranging from about 4 minutes to about 8 minutes while maintaining the temperature of the electrolyte between about 120° F. and about 150° F.

Claim 2 is the same as claim 1 with the additional limitation that the electric current is passed through the article and electrolyte "for between about 4 minutes and about 8 minutes."

Claim 3 describes the electrolyte as containing about 50% sulphuric acid by weight and about 10% of tartaric acid by weight. Otherwise, it is the same as claim 2.

Claim 5 differs from claim 4 only in designating the article treated as being composed of "stainless steel of the AA type," and a temperature of the electrolyte of "between about 170° F. and about 200° F."

The first paragraph of the Ostrofsky patent specification recites:

The present invention relates generally to the art of manufacturing stainless iron and steel, and more particularly to the finishing of stainless iron and steel products such as wire, rods, plates, sheets, strip, rounds, bars and the like and the articles fabricated therefrom.

The patentee states further:

I preferably employ a solution comprising citric acid, sulphuric acid and water. I have found that a very high polish can be obtained where the proportions of the materials in the bath are approximately 55% citric acid, 15% sulphuric acid, and 30% water, by weight. These proportions, however, may be varied within relatively wide limits, depending upon the current density employed, the temperature at which the treatment is carried out, and the time of the treatment. Other factors also influence the operating conditions and the proportioning of the ingredients of the bath such as the nature of the material being treated and the character of the original surface thereof. I have also found that the character of the heat treatment, the grain size, and the amount of cold work done on the material has some effect upon the proportioning of the ingredients and the operating conditions to be employed. In the treatment of material of the character in question, the citric acid content of the bath can be varied from approximately 10% to 90% by weight; the sulphuric acid content can be varied from approximately ¼% to 70% by weight; and, the water can be varied from approximately 5% to 50% by weight.

Vol. 612 • No. 2 Tuesday, July 13, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Little or no water is necessary if the treatment is carried out at an appropriate temperature to maintain the ingredients of the bath in a fused condition but I have found that it is better to use at least a small amount of water due to the fact that appreciably lower operating temperatures can be utilised.

The specification states that the density of current employed can be varied over a relatively wide range; that current densities of approximately ½ ampere per square inch of the material being treated and current densities of as much as 40 amperes per square inch have both been found to give "entirely satisfactory results"; that the current density to be utilized in any given case will be regulated according to the desired time of treatment, the character of the bath, the temperature to be employed and the nature of the material; that the temperature employed likewise may be varied throughout a substantial range; that the patentee preferably maintains the bath at a temperature between approximately 50° C. (106° F.) and 125° C. (265° F.); that the temperature should be sufficiently high to maintain the organic acid in solution; and that the time of treatment also may be varied over a relatively wide range, the patentee having found that "When the various factors are properly correlated * * * extremely high polishes can be obtained in a relatively short period of time varying from ½ minute to 3 minutes."

Another paragraph of the specification reads:

> While I have stated above that I preferably employ a solution of citric acid, sulphuric acid and water as the electrolyte, I have found that any of the organic acids the stainless salts of which will permit ready flow of corrosion products away from the anode during the treatment will give satisfactory results in the bath. I have found that acetic acid, tartaric acid, formic acid, lactic acid, maleic acid, malic acid, succinic acid and glyceric acid will give good results.

Still another paragraph states:

> While I have stated above that I prefer to use sulphuric acid in the bath, I have found that satisfactory results can be obtained where any soluble compounds containing a sulphate radical is employed.

The patent sets out seventeen examples "By way of example and not by way of limitation," of treatments which the patentee states he found "to give excellent results," and it embraces fourteen claims, most of them being quite broad in that they do not state the relative proportions of organic acid (such as citric acid) and inorganic acid (i. e. sulphuric acid or a sulphate radical) used, or, where such proportions are stated, the ranges of percentages of both acids are extremely wide. The examples also are very broad. For illustration, Example No. 1 recites "using 2% to 60% sulphuric acid, 10% to 80% citric acid and 20% to 40% water."

Obviously it would require considerable time in which to calculate and considerable space in which to state the number of combinations of sulphuric acid, citric acid and water which might be made within the limits of the percentages so stated in Example No. 1. The same is true of all the examples and claims of the patent which designate ranges of percentages, and it is true also of the appealed claims.

The following is taken from the brief on behalf of appellants:

> Ostrofsky's patent gives the impression that he had investigated the whole field thoroughly. His teaching is comprehensive in that it mentions many acids and fixes percentage ranges of the acids which are exceptionally wide. It says that the amount of citric acid may range from 10% to 90% of the solution and that the amount of sulfuric acid may range from ½% to 70% of the solution. It is detailed in that it requires that the solutions must contain at least 50% of total acids, that the amount of inorganic acid should not be sufficient to cause substantial metal losses, and that the amount of organic acid should exceed that of the inorganic acid. It shows that substantial metal losses occurred with 20% of sulfuric acid in one instance. When such losses occur the metal surface becomes pitted and roughened. * * *

It was held in effect by both the Examiner and the Board that when some organic acid other than Ostrofsky's preferred citric acid is used the substituted acid is to be regarded as being of the same percentage or range of percentages as the citric acid displaced. To illustrate, if tartaric acid be substituted for citric acid in Ostrofsky's Example No. 1, the pertinent part of the example would read "10% to 80% tartaric acid." While certain of the reasons of appeal might be construed as challenging the correctness of this holding, the question is not argued in the brief and we take it that appellants acquiesced in the ruling.

The patent recites examples in which different organic acids were used instead of citric acid, and different of the claims named different organic acids. Thus, claims 1, 2, and 6 to 13, inclusive, named aliphatic carboxylic acid (which we understand includes tartaric acid); claim 4 names acetic acid; claim 5 names tartaric acid and a sulphate radical instead of citric acid and sulphuric acid (but gives no percentage of either); and claim 14 also names tartaric acid without giving any percentage of either it or of the sulphuric acid, but states that the total water content is about 32% by weight. Several of the claims name "a sulphate radical" instead of naming "sulphuric acid."

We do not deem it necessary to recite in detail the differences as to the number of amperes constituting the density of the current which is passed through the bath in following the process of the patent. The examples in the patent state different numbers but only two of the claims give numbers and both of them recite ½ to 40 per square inch of anode surface, the metal which is being treated, of course, being the anode.

No one of the claims of the patent states the time during which the treatment takes place; the examples range from thirty seconds in Example 14 to three minutes used in most of the other examples. As has been stated, the specification recites temperatures of from 100° C. to 125° C. The patent mentions only the treatment of 18–8 type of stainless steel, the type specified in appellants' claim No. 4, supra, type AA designated in appellants' claim 5 not being named. This, however, is not claimed to be of any importance upon the issues here.

While two of the patent claims name tartaric acid instead of citric acid as the organic acid, only one example specifying it by name is given. That is Example 14 which reads:

> Where the bath was composed of 60% tartaric acid, 8% sulphuric acid and 32% water, good results were obtained by using a current density of 10 amperes per square inch for a period of thirty seconds, the bath temperature being 100° C. [212° F.]

It will be observed that each of the appealed claims requires only from 5% to 20% of tartaric acid as against the 60% named in the example (neither of the patent claims which specifies tartaric acid states any percentage but some of those naming aliphatic carboxylic acid state percentage ranges), and 40% to 70% of sulphuric acid as against 8% named in the example.

It may be stated at this point that, as is pointed out, in substance, in the brief for appellants, neither any claim nor any example which states definite percentages in the electrolyte composition recites more than 15% of inorganic (that is, a sulphate radical or sulphuric) acid or less than 46% of organic (that is, such as citric, acetic and tartaric) acids but where ranges of percentages are given there is, in every instance, a degree of overlapping of appellants' ranges and the ranges of the patent.

This is recited in the brief of the Solicitor for the Patent Office as follows (reference to pages of the record omitted):

> Ostrofsky * * * discloses the use of 10% to 90% of tartaric acid and ½% to 70% of sulphuric acid. These values include two-thirds of the tartaric acid range (5% to 20%) set forth in (appellants') claim 1 and the entire sulphuric acid range (40% to 70%). It will thus be seen that the reference expressly suggests the use of percentages of these materials falling within the ranges of claim 1, and that the ranges of the reference and the claim overlap to a very substantial extent.

In its decision rendered May 16, 1946, the Board said, inter alia:

> Appellants emphasize that the ratio of sulphuric acid to organic acid in the present process is much greater than in the patent. In fact the situation in the patent is just the reverse for the patent emphasizes the use of a greater percentage of organic acid than sulphuric acid. We have given due consideration to this point but we do not deem it sufficient to overcome Ostrofsky as a reference. We believe that it would be natural for one working in this art to experiment further and to use a preponderance of sulphuric acid over the organic acid. We are of the opinion that what appellants have done was merely carrying forward the teachings of the patent.

Appellants filed a request for reconsideration which the Board, after discussion, denied "with respect to making any change in our former decision." The pertinent portion of its discussion stated:

> * * * this Board held that the claims on appeal were substantially met by the Ostrofsky patent. In Example 14 the patent shows the use of tartaric acid and sulfuric acid in the bath, but the percentages used were different from that specified in the claims. However since in the various examples given in this patent percentage range of the various acids that could be used was rather wide we could see no invention in trying out mixtures in which the sulfuric acid was in excess of the tartaric acid used. * * *

During the prosecution of the case in the Patent Office three affidavits were filed on behalf of appellants. Two of them were by Odar, one of the joint applicants. The first affidavit dated February 19, 1944, appears to have been directed to matters embraced in a publication identified as a "Field et al." publication, the only reference cited by the Examiner in an Office action adverse to the claims taken January 9, 1943.

In an Office action of September 9, 1943, the Examiner, adding the Uhlig publication, hereinbefore referred to as an additional reference, again rejected the claims and declared the rejection final. However, there seems to have been a reconsideration by the Examiner in connection with an amendment tendered by appellants and a new oath which had been required, and in a letter of March 7, 1944, the claims were again rejected with the Field et al. publication cited, and also the Ostrofsky patent. The second affidavit of the party Odar reciting the carrying out of a number of experiments was filed April 11, 1944, as a response to the Examiner's letter of March 7, 1944, supra.

The third affidavit (which it is supposed was filed sometime between November 14, 1944, when it was dated, and November 17, 1944, when the appeal to the Board was taken) was made by a party named Riegel who was, at the time of testifying, employed by the Republic Steel Corporation, being in charge of the corporation's research and development work on stainless steel. The Examiner made no comment on this affidavit. He referred to the others briefly in prior Office actions.

The Board's only comment respecting the affidavits is:

> During the prosecution of this application numerous affidavits and samples were filed tending to show that a superior product could be obtained by appellants' process over that of the patent. Appellants emphasize the fact that they are not trying to show that the Ostrofsky process is inoperative but merely that it produces a product inferior to that obtained by the present process.

It is contended before us that the Examiner rejected the claims upon the basis of his personal opinion, disregarding the factual evidence set out in the affidavits and, in effect, that the Board did likewise, and insists that this was error.

It may be said that the purport of the affidavits is that numerous tests in the treatment of stainless steel wire, first and last, were made by or under the direction of Messrs. Odar and Riegel which appellants claim demonstrated that "None of the surfaces produced within the disclosure of the Ostrofsky patent would have been acceptable to the trade," while experiments, or tests, made in conformity with some of the ranges, etc., embraced in appellants' specification did produce surfaces which would have been acceptable to the trade.

[1] The affidavits have been given full consideration by us but we are not convinced that they establish a state of facts which would justify reversal of the Board's decision. Assuming a showing by the affidavits that by experiments carried out with the use of materials within the percentage ranges defined in appellants' application, and within the time units and under the temperature degrees defined therein, a product resulted which might be more "acceptable to the trade" than products resulting from applying the process defined in one or two of the examples embraced in the Ostrofsky specification, it does not follow from this that what appellants did amounts to invention.

[2] Appellants have not challenged the operativeness of the Ostrofsky patent, nor have they demonstrated that the ranges, etc., stated in their appealed claims are critical as compared with the specification and claims of the reference.

The decision of the Board is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, J., was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE BETZ

No. 5399. Decided February 19, 1948. Petition for rehearing denied April 2, 1948

[— F.2d —; 77 USPQ 162]

1. APPLICATION — DISCLOSURE — NEW MATTER — INHERENCY.

Where appellant copied claims from a patent for the purpose of invoking an interference and the claims are rejected on the ground that they do not read upon appellant's disclosure, and where appellant invokes the principle of inherency, *Held* that mere possible inherency in a structure does not give one the right to invoke that doctrine.

2. SAME—SAME—SAME—SAME.

Where the application disclosure is equivocal and there is no teaching that appellant's structure must of necessity perform the function set out expressly in the claims, *Held* that the disclosure is not of such a character as to invoke the doctrine of inherency.

3. PATENTABILITY—PILOT BURNER.

Certain claims to a pilot burner being not readable upon the original disclosure of appellant's application, *Held* that they were properly rejected as new matter.

APPEAL from the Patent Office. Serial No. 361,079.

AFFIRMED.

Brown, Jackson, Boettcher & Dienner (*Charles V. Hildebrecht* of counsel) for Betz.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

On October 14, 1940, appellant filed his application, Serial No. 361,079, for a patent for "Thermo-electrically Operated Safety Devices." The Board of Appeals of the United States Patent Office affirmed the decision of the Examiner refusing to allow all of the claims, 19 and 20, of the application. The claims were copied from a patent to Ashcraft, No. 2,235,471, dated November 30, 1943, on an application, Serial No. 338,938, dated June 5, 1940, for the purpose of invoking an interference. The Primary Examiner held the claims are not readable upon the original disclosure of appellant's application. From the decision of the Board, this appeal was taken.

The claims read as follows:

19. In combination, a pilot burner comprising a tubular body having an apertured partition therein, means for supplying a fuel mixture of gas and air to said tubular body so that when ignited a flame projects from said tubular body starting from said apertured partition, a thermocouple mounted so as to extend through said partition with one junction within said flame and the other junction within said tubular body in the direct path of the unignited fuel flowing through said body, and means projecting from said tubular body beyond said apertured partition and partially confining the flame so as to direct it against said one junction.

20. In combination, a pilot burner comprising a tubular body having an apertured partition therein, means for supplying a fuel mixture of gas and air to said tubular body so that when ignited a flame projects from said tubular body starting from said apertured partition, a thermocouple mounted so as to extend through said partition with one junction within said flame and the other junction within said tubular body in the direct path of the unignited fuel flowing through said body, and an open ended housing projecting from said tubular body beyond said apertured partition so as to confine the flame and direct it against said one junction.

Two patents were discussed in the Examiner's statement, the Ashcraft patent, above mentioned, and the patent to Wetzel, 2,198,896, dated April 30, 1940.

The application, as far as the issue here is concerned, discloses a gas pilot burner, the body or casing of which is tubular in form. Within the casing is contained a burner face plate or partition, perforated with apertures or ports. The plate, according to the specification "is held in place in any suitable manner as by means of an externally threaded retaining ring * * *. If desired, however, burner face plate * * * may be welded in position in casing * * *." The fuel mixture of gas and air to the tubular body is supplied by means of a pipe. A thermocouple is shown extending through the plate, with one junction in the flame area, and two other junctions back of the plate but within the tubular body directly in the path of the unignited fuel flowing through the body. The air and gas mixture conducted by the pipe ignites on leaving the apertures in the burner plate and may be either a pilot flame or a full flame, depending on the fuel flow; but in both instances the burning fuel heats the hot junction. The fuel mixture coming through the pipe has a cooling effect on the so called "hot" junction, and should the flame be extinguished, the unignited fuel also cools the hot junction so as to quickly equalize the temperature of the hot and cold junctions, and thus decreases an electric current so that the safety device of the apparatus will move to the "off" or "deenergized" position.

The only ground of rejection is that the involved claims do not read upon appellant's disclosure. Therefore, it is unnecessary to discuss the two patents hereinabove mentioned.

It was held by the Board that claim 19 reads word for word upon the structure disclosed in the involved application except for the last portion of the claim reading as follows:

> means projecting from said tubular body beyond said apertured partition and partially confining the flame so as to direct it against said one [the hot] junction.

With respect to claim 20, the Board held that the last phrase thereof, although somewhat differently worded, practically means the same as the quoted part of claim 19. In other words, the only issue is whether or not the last phrase of each of the involved claims is new matter not disclosed in the application of appellant as originally filed.

Fig. 1 of the application depicts the tubular body of the burner within which is shown an apertured burner plate through which, in the center thereof, the hot junction of the thermocouple passes, the end of which is covered by a threaded nut or lug. The plate is shown to be held in place by an externally threaded retaining ring which is screwed into the threaded end of the tubular body and projecting therefrom beyond the burner plate or partition.

There is nothing in the specification of appellant that the ring holding the partition or face plate in place projects from the tubular body. Neither is there any disclosure that the ring shown in the drawing confines the flame partially, or otherwise directs the flame against the hot junction of the thermocouple. The only function assigned to appellant's ring is that it holds in place the burner face plate. That the specification merely attributes a holding function to the ring, we think is clear, for the reason that it is therein stated "If desired, however, burner face plate 4 may be welded in position in casing 1."

With reference to the disclosure contended by appellant to be present in his application by reason of Fig. 1, above referred to, the Board observed that "it is well known that patent drawings are not working drawings." Furthermore, in its specification, appellant states that "Figure 1 is a more or less diagrammatic view partially in section, illustrating the application of a thermocouple to a straight type of burner head in accordance with the present invention; * * *."

[1] Appellant does not contend that his original specification sets out the claimed function of his ring, to either confine or direct the flame upon the thermocouple hot junction. He invokes the principle of inherency in his structure and argues that to claim a function, which is the natural result flowing from the structure and operation, as taught in the description and drawings of an application, does not constitute new matter.

It has been held in this court many times that mere possible inherency in a structure does not give one the right to invoke that doctrine. See *In re Draeger et al.*, 32 CCPA (Patents) 1217, 150 F.2d 572, 66 USPQ 247, 581 O. G. 7.

We are of opinion that appellant's ring, which holds the burner plate in place, broadly speaking, confines the flame to the space surrounded by the ring. We can not say that the structure directs the flame, as called for by the claims. It is true that the hot junction of the thermocouple is in the flame, but we are sure that the flame is not directed against that junction. Furthermore, appellant's ring is not necessarily a projection at all. The specification specifically states that the perforated burner plate may be held in place by welding. If it were so held in place, of course, there would not necessarily be a "means projecting from said tubular body beyond said apertured portion * * *" and no "partially confining the flame so as to direct it against said one junction."

[2] The equivocal disclosure, such as we have above mentioned, we are convinced is not of such a character as to invoke the doctrine of inherency. There is no teaching here that appellant's structure must of necessity confine and direct the flame, as defined by the express limitations in the last phrase of the invoked claims.

[3] For the reasons hereinabove given, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

T. M. 181,584. (See T. M. 333,125.)

T. M. 271,624. (See T. M. 333,125.)

T. M. 294,839. (See T. M. 333,125.)

T. M. 333,125, T. M. 294,839, Bristol-Myers Co., Hair tonic; T. M. 181,584, T. M. 271,624, Lewis Bros., Inc., same, D. C. N. J. (Trenton), Doc. 10675, *Bristol-Myers Co.* v. *Vitamin Hall et al.* Consent decree for injunction June 1, 1948.

NOTICES

Adjudicated Patents

(C. C. A. Mass.) Bower patent, No. 2,053,177, for a work holder, claims 5, 7, and 14 *Held* not infringed. *Brown & Sharpe Mfg. Co.* v. *O. S. Walker Co.*, 167 F.2d 687; 77 USPQ 288.

(C. C. A. Mass.) Bing and Block patent, No. 2,209,558, for a magnetic clamping appliance, claims 1 and 4 *Held* not infringed. *Id.*

Interference Notices

Kaw Products Co. Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of John Bird Company, Bird Block, Sea St., Rockland, Maine, for registration of a trade-mark and registration No. 257,505, issued June 11, 1929, to Kaw Products Co. Inc., 19 North 4th St., Philadelphia, Pa., and the notice of such declaration sent by registered mail to the said Kaw Products Co. Inc. at the said address having been returned by the post office undeliverable, notice is hereby given that unless Kaw Products Co. Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
June 15, 1948. *Assistant Commissioner of Patents.*

Du Barry Sportswear Manufacturing Corp., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Desmond's (Desmond's, Inc., assignee, substituted), 616 Broadway, Los Angeles, Calif., for registration of a trade-mark and registration No. 279,050, issued January 6, 1931, to Du Barry Sportswear Manufacturing Corp., 40 West 22nd St., New York, N. Y. and the notice of such declaration sent by registered mail to the said Du Barry Sportswear Manufacturing Corp. at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Du Barry Sportswear Manufacturing Corp., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
June 15, 1948. *Assistant Commissioner of Patents.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,385,391. VENETIAN BLIND. Patented Sept. 25, 1945. Reg. No. 9,740.

Pat. 2,435,373. HEAD FOR VENETIAN BLINDS. Patented Feb. 3, 1948. Reg. No. 9,741.

The two patents listed above relate to a head structure for Venetian blinds permitting access to both sides of the blind for cleaning, as well as permitting access to window. Pat. 2,435,373 is a simplified form of the head of Pat. 2,385,391. The blind is carried by a swinging cap plate pivoted at one end to a fixed head plate so the head and blind are hinged to swing outwardly. A pin projects from the free end of cap plate and, as the blind is swung to closed position, rides upwardly along an inclined camface of the fixed plate, forcing the cap plate upwardly to lie snugly against the underside of the frame plate to ensure proper support of the blind. (Co-owner) Charles J. Van Buren (V. B. C. Blind Company). Address correspondence to Shepherd & Campbell, 900 F St., N. W., Washington 4, D. C. Groups 25—63; 33—59; 34—95.

Pat. 2,437,729. BELT BUCKLE. Patented Mar. 16, 1948. Free end of belt is guided over a transverse rib in guide wall of buckle and under a locking member which consists of a roller having diverging legs for wedging belt against the rib. Roller is slidably and rotatably mounted in the guide for moving toward and away from the rib when belt is pulled in either direction. A pivoted lever extending outwardly through wall of guide engages and releases the locking member. Modifications shown. (Owner) Edward M. Easter, 25915 Mulberry, Rt. 8, Birmingham, Mich. Groups 39—81—99; 40. Reg. No. 9,742.

Pat. 2,199,184. TIME SWITCH. Patented Apr. 30, 1940. An automatic time switch for a heater. Comprises a clock-driven dial with a circular series of openings to interchangeably receive pins projecting from the front and rear faces of the dial to indicate predetermined time intervals at which the switch is to be turned on and off. A mercury switch is secured by a spring clip to a pair of levers pivoted to the frame plate and arranged to engage the pins to open and close the switch. A link motion mechanism is connected to the levers for resetting one of the levers when the other lever is moved to operative position by the pins. (Co-owner) Leander F. Krause. Address correspondence to Robb & Robb, Woodward Bldg., Washington 5, D. C. Groups 34—61; 36—19. Reg. No. 9,743.

Pat. 2,434,812. MIXER. Patented Jan. 20, 1948. A mixer for aerating drinks may be removably placed on milk bottle or other open-top container and manually operated by crank at side or power driven by means of shaft mounted at top. A cap of elastic material fitting on rim of bottle carries a cylindrical metal sleeve, in which is rotatably mounted a shaft. Bottom of shaft has a cross-barred wire-loop agitator vane. Surrounding a substantial part of the shaft is a tubular member, carrying agitating means on the part extending into container. Rotation of shaft and tube in opposite directions is provided for. Fan circulates air to contents of container through tube. (Owner) Deane Roles, Box 1178, Roseburg, Oreg. Groups 34—41; 36—31. Reg. No. 9,744.

Pat. 2,428,649. ILLUMINATED MIRROR. Patented Oct. 7, 1947. An illuminated mirror is adapted to permit a person to shave himself with an electric razor while lying in bed. Mirror is secured by a universal joint to a tubular arm pivotally connected to a telescoping arm, which is pivotally connected to a bracket removably clamped to headboard of bed, so that mirror may be adjusted above and in front of user. An electric light bulb is supported back of an unsilvered portion of mirror and has a curved reflector shield, so that rays are diffused over face of frosted mirror. An electric cord is trained from bulb socket through tubular arms and is plugged into wall. Shaver may be plugged into light bulb socket or into wall. If bed has no headboard, a wall plate may support the bracket. (Owner) Franklin M. Brown, 1 Montgomery St., San Francisco 4, Calif. Groups 32—31; 34—81; 36—99. Reg. No. 9,745.

Pat. 2,291,681. SHAVING KIT. Patented Aug. 4, 1942. Box of toilet kit has a hinged front wall, a vertical panel, and a horizontal shelf. Vertical panel has several plug-in sockets, toggle switches, and a feed wire. A fluorescent lamp is carried on inside of the swingable front wall, and wall is held in desired position by adjustable wings. A mirror is adjustably mounted above lamp. Compartment behind panel provides space for toilet equipment. (Owner) Glen A. Blanton, 108 E. North St., Albemarle, N. C. Groups 25—99; 33—59; 36—21; 39—81. Reg. No. 9,746.

Pat. 2,434,821. NECKTIE HOLDER. Patented Jan. 20, 1948. Holder for tying and holding in place a four-in-hand knotted necktie consists of a resilient wire loop frame in open-end V-shape and a triangular sleeve slidable on legs of the V. Frame is looped at top to fasten to a collar button. Frame and sleeve are curved to fit shape of neck and knot. When sleeve is dropped to usual position of tying knot, an opening is left between upper edge of sleeve and frame for end of tie to be passed through. Knot is tied in usual manner over the sleeve and sleeve is moved up, detents in frame locking sleeve in position. Knot is loosened for untying by lowering sleeve. (Owner) Francis J. Ulrich, 1605 N. St. Andrews Place, Hollywood 28, Calif. Groups 22—X1; 33—49; 39—71—81; 40. Reg. No. 9,747.

Pat. 2,279,760. HANGER. Patented Apr. 14, 1942. Clothespins of the spring-clip type are held in flexible socket openings around rim of a flat circular sheet centrally suspended by the usual hanger hook. Each clip is locked in extended position by inserting an arm of the clip in socket opening. Designed to permit free circulation of air for drying articles of clothing. The hanger may also be made of several strips placed in criss-cross position instead of as a single flat sheet. (Owner) C. F. Pease, 1236 Boston St., Altadena, Calif. Groups 25—99; 33—73. Reg. No. 9,748.

Pat. 2,309,008. VENDING MACHINE. Patented Jan. 19, 1943. Reg. No. 9,749.

Pat. 2,353,496. VENDING MACHINE. Patented July 11, 1944. Reg. No. 9,750.

Pat. 2,370,684. COIN CONTROL APPARATUS. Patented Mar. 6, 1945. Reg. No. 9,751.

Pat. 2,382,576. DISPENSING UNIT. Patented Aug. 14, 1945. Reg. No. 9,752.

Pat. 2,388,497. VENDING MACHINE. Patented Nov. 6, 1945. Reg. No. 9,753.

Pat. 2,410,231. VENDING MACHINE. Patented Oct. 29, 1946. Reg. No. 9,754.

Pat. 2,425,487. DISPENSING APPARATUS. Patented Aug. 12, 1947. Reg. No. 9,755.

These seven vending machines are adapted to packages of various sizes and assortments. Patent 2,309,008 describes a machine for dispensing packages of oblong shape. Patent 2,353,496 relates to the vending of cylindrically shaped packages. A coin control for accepting coins of any denomination is described in Patent 2,370,684, so that any article from one of a series of units may be dispensed. Patent 2,382,576 shows a machine for the exclusive purpose of vending post cards, stamped envelopes, and other articles of similar type. Patent 2,388,497 provides a turntable on which several rows of stacked packages are arranged in full view of the purchaser so that a selection may be made. Interchangeable units are assembled in a cabinet shown in Patent 2,410,231 which allow any number of articles to be dispensed. The vending machine disclosed in Patent 2,425,487 presents a series of dispensing units and a coin control by which only a single unit at a time may be operated and whereby coins of various denominations may be used to operate any selected group of units. (Owner) C. F. Pease, 1236 Boston St., Altadena, Calif. Group 35—73.

Pat. 2,438,155. PROCESS OF WELDING METAL BODIES BY HIGH-FREQUENCY ELECTRIC HEATING OF DIELECTRIC MATERIAL THEREBETWEEN. Patented March 23, 1948. Royalty-free, non-exclusive sub-licenses under the above identified patent and Pat. 2,402,381 previously registered as No. 8,108, as well as corresponding Canadian patent rights, are available on a reciprocal basis. These patents relate to method and machine for welding sheet metal containers and parts therefor. Full particulars with respect to terms, development work, reciprocal rights, etc., may be obtained from the American Can Company, 230 Park Ave., New York 17, N. Y. Groups 35—42—43; 36—19. Reg. No. 9,756.

Pat. 2,437,827. HAND OPERATED ABRADING AND POLISHING TOOL. Patented March 16, 1948. A portable manually operated tool for finishing plane surfaces of wood, metal, or other materials. An oblong base block with rounded corners has felt on working face as cushion for an endless band of abrading, polishing, or finishing material, which encircles the block and is clamped taut over working face by hinged cleats at front and rear of top, with space between cleats to accommodate slack. Cleats are secured in retaining position by sash-lock (or other) fasteners. Band is adjustable to compensate for wear. A handle (similar to that of a carpenter's plane) and a gripping knob are provided. (Owner) W. J. Lund, Staples Clinic, Staples, Minn. Groups 32—91; 33—52; 35—53. Reg. No. 9,757.

Pat. 2,435,482. PANTS DRYER AND SHAPER. Patented Feb. 3, 1948. A frame for stretching and drying trousers is mounted in carriage on endless conveyor track to be conveyed through drying chamber. Frame, on which trousers are fitted immediately after laundering or cleaning, is composed of shaped sections mounted for movement away from each other for stretching and for movement toward each other to allow trousers to be applied or removed. Frame is resiliently held in extended position by a spring, to prevent undue stretching. Several stretchers may be arranged on the conveyor track. (Co-owner) Oliver S. Vigerust, La Tuna, Tex. Group 35—62—82. Reg. No. 9,758.

United States Government Owned Patents

The following five patents have been assigned to the United States as represented by the Secretary of Agriculture. License to practice the invention will be issued on a royalty-free, non-exclusive, non-transferable, revocable basis. Applications for licenses should be addressed to the Bureau of Agricultural and Industrial Chemistry, U. S. Department of Agriculture, Washington 25, D. C.

Pat. 2,432,638. METHOD FOR THE ISOLATION OF PENICILLIN. Patented Dec. 16, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Penicillin is present in extremely small quantities in biological fluids, such as the fermentation liquor resulting from the culture of penicillin-producing molds. The patent covers a method for the recovery of penicillin comprising adsorbing the penicillin from the neutralized and filtered fermentation liquor onto activated carbon. The carbon is then separated from the liquor and the penicillin eluted from the carbon with an aqueous solution of an organic aliphatic alcohol of at least 4 carbon atoms having a substantial concentration of water. Group 28—31. Reg. No. 9,759.

Pat. 2,433,849. CORK SUBSTITUTE AND A PROCESS FOR ITS PRODUCTION. Patented Jan. 6, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A cork substitute is made from finely divided particles of a pithy nature which contain groups of microscopic gas cells, incorporated in a proteinaceous body such as gelatin, glue, soybean protein or casein. The material has structure and properties similar to natural cork. Its properties may be controlled by modifying agents and plasticizers. A fluid medium is made from an elastomer of a proteinaceous nature, modifiers and plasticizers and comminuted cellulosic pithy particles. The medium is aerated to incorporate minute gas cells uniformly distributed throughout. The medium may be molded into any desired shape. Groups 28—92; 28—83. Reg. No. 9,760.

Pat. 2,435,478. POLYAMIDES FROM POLYOCTADECAPOLYENYLAMINE. Patented Feb. 3, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) The patent relates to polyamides of polymeric fat acids and the polyamines obtained by hydrogenation of the nitriles of polymeric fat acids. The products are hard resinous solids, or tough, rubbery substances which become hard and resinous at low temperatures. They are suitable as bases for rubber substitutes with good low temperature characteristics. Group 28—81—83. Reg. No. 9,761.

Pat. 2,436,659. PROCESS OF MAKING D-SACCHARIC ACID. Patented Feb. 24, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) D-Saccharic acid is made by nitric acid oxidation of d-glucose. A non-catalytic method is described in which a reaction mixture containing 50% to 70% nitric acid is employed at 55° C. to 90° C. The ratio of acid to glucose is about 3 to 8 moles of acid per mole of glucose. The process avoids the use of expensive catalysts and produces d-saccharic acid in high yields. Group 28—31. Reg. No. 9,762.

Pat. 2,437,946. PLASTICIZED PROLAMINE COMPOSITION. Patented March 16, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Prolamines such as zein are made into coating compositions, films, filaments, and molded plastics. The products are clear, transparent, flexible, and waterproof. The solidifying compositions consist essentially of the prolamine as the film-forming or solidifying agency together with an amide of lactic acid as plasticizer. Groups 22—33; 26—11; 28—83. Reg. No. 9,763.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 13, 1948

[VOL. 612. No. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 496,270. THE RAILWAY SUPPLY & MANUFACTURING COMPANY, Cincinnati, Ohio. Filed Feb. 8, 1946.

RAYCO

FOR COTTON WASTE AND LINTERS.
Claims use since June 22, 1944.

Ser. No. 511,503. RODEN COAL COMPANY, Marvel, Ala. Filed Oct. 25, 1946.

MARVEL COAL

The use of the word "Coal" is disclaimed.
FOR COAL.
Claims use since 1909.

Ser. No. 524,031. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

AKU

FOR ARTIFICIAL FIBERS, SUCH AS CELLULOSE FIBER, PROTEIN FIBER (E. G., MILK WOOL), CUT ARTIFICIAL SILK, RAYON STAPLE FIBER, NYLON FIBER, ARTIFICIAL STRAW AND ARTIFICIAL HORSEHAIR.
Claims use since 1929.

Ser. No. 524,032. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

ENKA

FOR ARTIFICIAL FIBERS, SUCH AS CELLULOSE FIBER, PROTEIN FIBER (E. G., MILK WOOL), CUT ARTIFICIAL SILK, RAYON STAPLE FIBER, NYLON FIBER, ARTIFICIAL STRAW AND ARTIFICIAL HORSEHAIR.
Claims use since 1913.

Ser. No. 524,033. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

FOR ARTIFICIAL FIBERS, SUCH AS CELLULOSE FIBER, PROTEIN FIBER (E. G., MILK WOOL), CUT ARTIFICIAL SILK, RAYON STAPLE FIBER, NYLON FIBER, ARTIFICIAL STRAW AND ARTIFICIAL HORSEHAIR.
Claims use since 1924.

Ser. No. 524,034. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

ENKASA

FOR ARTIFICIAL FIBERS, SUCH AS CELLULOSE FIBER, PROTEIN FIBER (E. G., MILK WOOL), CUT ARTIFICIAL SILK, RAYON STAPLE FIBER, NYLON FIBER, ARTIFICIAL STRAW AND ARTIFICIAL HORSEHAIR.
Claims use since 1939.

Ser. No. 524,035. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

FIBRENKA

FOR ARTIFICIAL FIBERS, SUCH AS CELLULOSE FIBER, PROTEIN FIBER (E. G., MILK WOOL), CUT ARTIFICIAL SILK, RAYON STAPLE FIBER, NYLON FIBER, ARTIFICIAL STRAW AND ARTIFICIAL HORSEHAIR.
Claims use since 1935.

Ser. No. 524,036. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

TENAX

FOR ARTIFICIAL FIBERS, SUCH AS CELLULOSE FIBER, PROTEIN FIBER (E. G., MILK WOOL), CUT ARTIFICIAL SILK, RAYON STAPLE FIBER, NYLON FIBER, ARTIFICIAL STRAW AND ARTIFICIAL HORSEHAIR.
Claims use since 1924.

CLASS 2

RECEPTACLES

Ser. No. 495,608. KENNEDY CAR LINER & BAG CO. INC., Shelbyville, Ind. Filed Jan. 29, 1946.

KeKo

FOR BLANKET BAGS, GARMENT BAGS AND FOOD BAGS MADE OF PLASTIC COATED MATERIAL AND SYNTHETIC FILM.

Claims use since Jan. 7, 1939, on blanket bags; and since July 1939 on the other named goods.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 483,851. FRED U. GORDY, doing business as F. Gordy Mfg. and Dist. Co., Salt Lake City, Utah. Filed May 28, 1945.

SLIX

FOR CONCENTRATED BASE FOR LIQUID SOAPLESS CLEANER USED IN CLEANING PAINTED SURFACES, LEATHERS, FLOORS, ENAMELS, TILES AND ALL HARD SURFACES, AND SO ON; ALSO FOR SHAMPOOING RUGS, UPHOLSTERED FURNITURE, AND SO ON.

Claims use since Mar. 9, 1945.

Ser. No. 517,373. ARNO J. LUTH, doing business as Falls Chemical Products Co., Oconto Falls, Wis. Filed Feb. 12, 1947.

FACID

FOR CHEMICAL COMPOUNDS USED AS A CLEANER AND DETERGENT HAVING THE INCIDENTAL PROPERTIES OF A DISINFECTANT, AND USED PRIMARILY IN THE DAIRY AND RELATED INDUSTRIES.

Claims use since May 1944.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 503,665. THE DAN PERKINS COMPANY, Memphis, Tenn. Filed June 11, 1946.

The words "Condensed Smoke" are disclaimed apart from the mark and the representation of a man in the drawing is fanciful.

FOR A LIQUID COMPOSED OF PYROLIGNEOUS ACID (REFINED WOOD SMOKE), CARAMEL COLORING AND SPICES USED FOR PAINTING MEATS FOR THE PURPOSE OF COLORING, PRESERVING AND FLAVORING THEM.

Claims use since June 22, 1944.

Ser. No. 507,018. THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Aug. 7, 1946.

PENNSALT PM-90

FOR COMPOSITIONS OF STRONG MINERAL ACIDS, IN CONCENTRATE OR AQUEOUS SOLUTION FORM, FOR INDUSTRIAL USE.

Claims use since June 1944.

Ser. No. 507,521. D'ORSAY SALES COMPANY, New York, N. Y. Filed Aug. 16, 1946.

PIROUETTE

FOR PERFUMES AND TOILET WATERS.

Claims use since Aug. 6, 1946.

Ser. No. 507,662. CHARLES V. SPARHAWK, doing business as Sparhawk Company, Sparkill, N. Y. Filed Aug. 19, 1946.

SKUNKADORA

FOR DEODORANT COMPOSITIONS FOR DEODORIZING STRUCTURES, INDUSTRIAL ESTABLISHMENTS AND SO FORTH.

Claims use since Jan. 1, 1938.

Ser. No. 505,790. AKTS. M. AARSLEFF & Co., Copenhagen, Denmark. Filed July 18, 1946.

Krinoline

FOR PERFUMES AND EAU DE COLOGNE.

Claims use since 1935.

Ser. No. 510,503. GALACTINA & BIOMALS A. G., Belp, Switzerland. Filed Oct. 9, 1946.

GALAMALT

FOR NUTRITIVE TONIC CONTAINING MALT.

Claims use since March 1921.

Ser. No. 521,890. INDUSTRIAL LINING ENGINEERS, INC., Edgeworth, Sewickley, Pa. Filed May 5, 1947.

INSULBOND

FOR CHEMICAL PLASTIC COATING COMPOUNDS FOR APPLICATION TO METAL TO BE CONVERTED BY HEAT TO PROTECT SAME AGAINST WEAR, CORROSION AND CHEMICAL FUMES AND TO PROVIDE ELECTRICAL INSULATION THEREFOR.

Claims use since Nov. 25, 1946.

Ser. No. 523,125. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed May 27, 1947.

Prolysamin

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF AMINO ACID DEFICIENCIES.

Claims use since Dec. 31, 1946.

Ser. No. 523,126. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed May 27, 1947.

Prohydramin

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF AMINO ACID DEFICIENCIES.

Claims use since Dec. 31, 1946.

Ser. No. 523,127. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed May 27, 1947.

Prohydratein

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF AMINO ACID DEFICIENCIES.

Claims use since Dec. 31, 1946.

CLASS 10

FERTILIZERS

Ser. No. 506,490. FERTIL-CEL GARDENS, West Palm Beach, Fla., and New York, N. Y. Filed July 29, 1946.

FERTIL-CEL

The word "Fertil" is disclaimed apart from the mark as shown.

FOR FERTILIZERS—NAMELY, FERTILIZER SUBSTANCES AND PLANT GROWTH STIMULATORS, COMPRISING PHOSPHATES, ALKALI METAL SALTS, NITROGEN-CONTAINING COMPOUNDS, OR IRON SULPHATE, WITH OR WITHOUT HORMONES AND VITAMINS, EITHER IN DRY FORM OR ASSOCIATED WITH AN AQUEOUS SOLVENT, AND OPTIONALLY CARRIED BY INERT BASES FORMED OF MINERAL OR CELLULOSIC MATERIAL.

Claims use since June 1, 1944.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 511,349. MULLER & BARRINGER, doing business as Muller-Barringer, New York, N. Y. Filed Oct. 23, 1946.

Applicant disclaims the word "Wood" and the representation of the goods.

FOR DECORATIVE WALL AND SURFACE COVERING MADE OF PLYWOOD PRESENTING A TESSELLATED APPEARANCE AND SOLD IN THE FORM OF SHEETS OR STRIPS.

Claims use since Oct. 9, 1946.

Ser. No. 511,800. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J. Filed Oct. 31, 1946. Under 10-year proviso.

DIXON'S

FOR REFRACTORY BRICKS, BLOCKS, AND SHAPES AND REFRACTORY CEMENT.

Claims use since 1893.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 503,300. THE MACO CORPORATION, Huntington, Ind. Filed June 5, 1946.

MACO'S
3-WAY COOKER

No claim is made to the words "3-Way Cooker" apart from the mark.

FOR A COMBINED CHICKEN FRYER, DUTCH OVEN, AND CASSEROLE, MADE OF A BASE METAL MATERIAL.

Claims use since Oct. 15, 1945.

Ser. No. 523,918. THE MURDOCK MFG. AND SUPPLY COMPANY, Cincinnati, Ohio. Filed June 10, 1947.

BELV-SAN

FOR RAILROAD WATER SERVICE HYDRANT AND PARTS THEREOF.

Claims use since May 28, 1947.

Ser. No. 523,919. THE MURDOCK MFG. AND SUPPLY COMPANY, Cincinnati, Ohio. Filed June 10, 1947.

SAN-CLO

FOR RAILROAD WATER SERVICE HYDRANT AND PARTS THEREOF.
Claims use since May 1, 1947.

CLASS 15

OILS AND GREASES

Ser. No. 494,028. CHRISTOPHER BROTHERS, Detroit, Mich. Filed Dec. 29, 1945.

Chris-Co

FOR MOTOR FUEL MADE FROM AN ALCOHOL BASE WITH PURE MEDICINAL CASTOR OIL ADDED.
Claims use since Nov. 6, 1945.

Ser. No. 494,256. THE BROOKS OIL COMPANY, Cleveland, Ohio. Filed Jan. 4, 1946.

I.P.

FOR LUBRICATING OILS AND GREASES.
Claims use since Dec. 27, 1945.

Ser. No. 514,124. ARTHUR GEORGE MEIER, doing business as Inland Products Co., Roanoke, Va. Filed Dec. 12, 1946.

Duolife

ACTIVATED

Exclusive use of the word "Activated" is not claimed apart from the rest of the mark.
FOR MOTOR LUBRICATING OIL.
Claims use since June 1, 1946.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 507,853. THE RESINOUS PRODUCTS & CHEMICAL COMPANY, Philadelphia, Pa. Filed Aug. 22, 1946.

PARAPLEX

FOR SYNTHETIC RESINOUS MATERIALS OR SOLUTIONS THEREOF PRIMARILY FOR USE IN PIGMENTED OR UNPIGMENTED FORM, AS PROTECTIVE COATINGS.
Claims use since July 7, 1930.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 476,445. STATE ELECTRIC SUPPLY, Oakland, Calif. Filed Nov. 14, 1944.

The trade-mark is an outline map of the State of California posed over a red disc background and crossed by two electric spark representations, the shading in the drawing indicating the color red. The outline representation of the State of California is disclaimed apart from the mark as shown.

Claims use since October 1942.

Ser. No. 500,975. F M RADIO MFG. CO. INC., Cleveland, Ohio. Filed Apr. 26, 1946.

PIN-UP RADIO

No claim is made of the outline representation of the name-plate and of the word "Radio," apart from the mark as shown.
FOR RADIO RECEIVING SETS.
Claims use since Feb. 15, 1945.

Ser. No. 502,724. SONOTONE CORPORATION, Elmsford, N. Y. Filed May 24, 1946.

SONOTONE

FOR RADIO RECEIVER SETS.
Claims use since November 1936.

Ser. No. 510,219. HERBERT E. WHITE, doing business as White Engineering Company, Windsor, Ohio, assignor to Therm-O-Larm Corporation, Cleveland Heights, Ohio. Filed Oct. 3, 1946.

THERM - O - LARM

Applicant disclaims the term "Larm" apart from the mark as shown.
FOR THERMOSTATIC SWITCH WITH ATTENDANT WIRING SUITABLE FOR MOUNTING IN LOCATIONS WHERE FIRES ARE APT TO BREAK OUT SUCH AS NEAR CHIMNEYS, FURNACES, ETC., AND FOR CONNECTION TO AN ELECTRIC SIGNAL SUCH AS A DOOR BELL, BUZZER, ETC., TO CONSTITUTE AN ELECTRIC FIRE ALARM.
Claims use since January 1939.

Ser. No. 522,339. TRADIO, INC., Deal, N. J. Filed May 13, 1947.

TRADIO-ette

FOR ELECTRICAL EQUIPMENT—NAMELY, RADIO AND TELEVISION RECEIVING SETS.
Claims use since Apr. 10, 1947.

Ser. No. 524,574. SON-CHIEF ELECTRICS, INCORPORATED, Wingted, Conn. Filed June 20, 1947.

CORONET

FOR ELECTRICAL APPARATUS—NAMELY, AUTOMATIC AND NON-AUTOMATIC IRONS, HEATERS, HEATING PADS FOR GENERAL USE, TOASTERS AUTOMATIC AND NON-AUTOMATIC, CURLING IRONS, WAFFLE IRONS, SANDWICH TOASTERS, AND HOT PLATES.
Claims use since Jan. 1, 1939.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 490,116. HERMAN GOETZE, New York, N. Y. Filed Oct. 18, 1945.

PEEK A Boo

FOR CLACKER TOY.
Claims use since Sept. 5, 1945.

Ser. No. 503,490. WOOD MANUFACTURING CO., El Dorado, Ark. Filed June 7, 1946.

"Dipsy Doodle"

FOR FISH LURES.
Claims use since Jan. 1, 1944.

Ser. No. 504,342. WILLIAM N. DE SHERBININ, Brookfield, Conn. Filed June 21, 1946.

Korker

FOR FISHING EQUIPMENT, COMPRISING HOOK PROTECTORS, FLOATS AND BOBBINS, LEADERS, AND REELS FOR EXTRA LINE AND FOR DRYING LINES.
Claims use since Mar. 12, 1946.

Ser. No. 506,452. MORRIS KANEFF, doing business as Mayfair Leather Sportswear, Philadelphia, Pa. Filed July 29, 1946.

"CONFERENCE CHAMP"

FOR FOOTBALLS, BASKETBALLS, AND FIELDERS' GLOVES.
Claims use since May 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 496,912. CHARLES F. JOHNSTON, doing business as Super Auto Products Co., Oakland, Calif. Filed Feb. 19, 1946.

CAMOIL

FOR AUTOMOBILE ENGINE OIL REGULATORS OF ORIFICE CONSTRICTION TYPE FOR INSERTION IN THE CAMSHAFT OIL PASSAGE TO REDUCE THE OIL FLOW THERE THROUGH.
Claims use since February 1940.

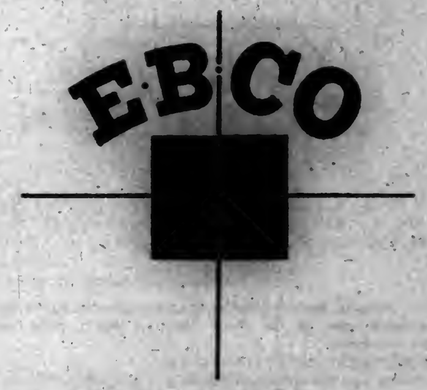
Ser. No. 503,968. THE BASTIAN-BLESSING COMPANY, Chicago, Ill. Filed June 15, 1946.

MICRO-MIST

FOR ELECTRICALLY CONTROLLED CARBONATING APPARATUS FOR POTABLE LIQUIDS.
Claims use since Apr. 1, 1945.

Ser. No. 511,670. BRIDWELL BOILER WORKS, Atlanta, Ga. Filed Oct. 29, 1946.

ECONOMIXER



FOR MACHINES FOR MIXING CONCRETE, MORTAR, AND SIMILAR AGGREGATES.
Claims use since Apr. 8, 1946.

Ser. No. 517,890. DIAMOND CLAMP & FLASK COMPANY, Richmond, Ind. Filed Feb. 21, 1947.

FOR METAL CASTING AND METAL FOUNDRY EQUIPMENT—NAMELY, FLASKS, FLASK FITTINGS, JACKETS, WEDGES, STEEL BANDS, CLAMPS, CORE BOXES, PINCH DOGS, BOTTOM PLATES, RAPPING PLATES, CORE PLATES, TOOLS AND ACCESSORIES FOR PRODUCING METAL CASTINGS.
Claims use since 1890.

Ser. No. 524,121. ELECTRIC BOAT COMPANY, Groton, Conn. Filed June 13, 1947.

FOR OFFSET PRINTING PRESSES.
Claims use since Apr. 15, 1947.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 519,221. ROCHESTER MANUFACTURING CO., INC., Rochester, N. Y. Filed Mar. 18, 1947.

"Universal"

FOR INDICATING GAUGES USED FOR MEASURING THE LEVEL OF LIQUIDS.
Claims use since May 25, 1927.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 493,273. MIDO SOCIETE ANONYME, Bienne, Switzerland. Filed Dec. 14, 1945.

OCEANSTAR

FOR WATCHES, WATCH CASINGS, AND PARTS OF WATCHES.
Claims use since December 1944.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 521,973. MORTON MANUFACTURING COMPANY, Chicago, Ill. Filed May 6, 1947.

Pantryette

FOR KITCHEN WALL CABINETS.
Claims use since June 2, 1945.

CLASS 33

GLASSWARE

Ser. No. 510,195. PITTSBURGH PLATE GLASS COMPANY, Pittsburgh, Pa. Filed Oct. 3, 1946.

NESA

FOR COATED PLATE GLASS AND/OR COATED WINDOW GLASS USED IN LAMINATED AND/OR UNLAMINATED GLASS UNITS, OR USED IN UNITS IN WHICH TWO OR MORE SUPERPOSED SHEETS OF PLATE GLASS OR WINDOW GLASS ARE EMPLOYED, AND WHEREIN THE SURFACES OF THE GLASS UNITS CAN BE HEATED BY ELECTRIC CURRENT TO PREVENT OR DISSIPATE FOG, WATER OF CONDENSATION, OR FROZEN MOISTURE, TO WHICH THE GLASS SURFACES MAY BE SUBJECTED, OR TO CONTROL TEMPERATURES ADJACENT THE GLASS SURFACES.
Claims use since June 20, 1946.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 525,869. LORD & ROBERTS RECORDINGS, San Diego, Calif. Filed July 3, 1947.

FOR MECHANICALLY GROOVED PHONOGRAPH RECORDS.
Claims use since Feb. 14, 1947.

CLASS 37

PAPER AND STATIONERY

Ser. No. 467,631. C. WILSON WOOD, doing business as L. K. Mallinckrodt, Baltimore, Md., assignor to L. K. Mallinckrodt, Inc., Baltimore, Md., a corporation of Maryland. Filed Feb. 21, 1944.

MEATEX

FOR WRAPPING PAPER, TOILET PAPER, PAPER TOWELS, PAPER NAPKINS, AND CLEANSING TISSUES.
Claims use since Dec. 30, 1942.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 517,469. STANLEY J. KOUNTS, Grand Forks, N. Dak. Filed Feb. 14, 1947.

ACRE-MAKER

FOR PRINTED CHARTS OF STATISTICAL TABLES FOR CALCULATING PERFORMANCE OF FARM MACHINERY BY WORK HOURS AND ACREAGE.
Claims use since Feb. 1, 1947.

Ser. No. 518,706. TUNG-SOL LAMP WORKS, INC., Newark, N. J. Filed Mar. 7, 1947.

FOR TECHNICAL DATA PUBLICATIONS.
Claims use since Oct. 14, 1943.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 498,831. THE FIRESTONE TIRE & RUBBER COMPANY, Akron, Ohio. Filed Mar. 23, 1946.

Velon

FOR WOVEN, KNITTED, AND NETTED PIECE GOODS OF VINYL-TYPE PLASTIC YARNS.
Claims use since Apr. 8, 1942.

Ser. No. 523,801. POST & SHERMAN, New York, N. Y. Filed June 7, 1947.

"PERMA-KLEEN"

The word "Kleen" is not claimed, exclusively, except when used in association with the word "Perma."
FOR TABLE-CLOTHS, AND COVERINGS—NAMELY, TABLE COVERS, PLACE MATS, AND RUNNERS.
Claims use since May 20, 1947.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 524,306. THE DENTISTS' SUPPLY COMPANY OF NEW YORK, New York, N. Y. Filed June 17, 1947.

T. N. R.

FOR ARTIFICIAL TEETH.
Claims use since Apr. 18, 1947.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 500,947. CONSOLIDATED GROCERS CORPORATION, Chicago, Ill. Filed Apr. 26, 1946.

Fernhill.

FOR CANNED VEGETABLES—NAMELY, ONIONS, FRENCH FRIED ONION, ARTICHOKES, PUMPKINS, SPICED ARTICHOKES, BEETS, KIDNEY BEANS, GREEN BEANS, ASPARAGUS, PIMIENTOS, POTATO SALAD, FRENCH FRIED AND CHEESE COATED SHOESTRING POTATOES, SUCCOTASH, LIMA BEANS, PEAS, CREAM STYLE AND WHOLE KERNEL CORN, CORN ON COB, FRITTERKORN, CARROTS, CARROTS AND PEAS, SQUASH, OKRA, OKRA AND TOMATO, BRUSSELS SPROUTS, CELERY HEARTS, WAX BEANS, RED CABBAGE, SWEET POTATOES, PARSNIPS, TOMATOES, SPINACH, BROCCOLI, MIXED VEGETABLES; CANNED SAUERKRAUT; HOMINY; DRIED SPLIT PEAS; CANNED OVEN BAKED BEANS; CANNED SEA FOOD—NAMELY, CRAB MEAT, SALMON, SALMON STEAKS, SHRIMPS, MACKEREL, CLAMS, FISH FLAKES, OYSTERS, SARDINES, KIPPERED STURGEON, TUNA FISH, SHAD ROE, AND LOBSTER; CONDIMENTS—NAMELY, CELERY SALT, ONION SALT, PAPRIKA, GARLIC SEASONING, PEPPER, GINGER, AND MUSTARD; OLIVE OIL; CORN MEAL MUSH; BARLEY; WILD RICE; OATMEAL; ROLLED OATS; CRACKED WHEAT; CAKE FLOUR; WHEAT BRAN; BUCKWHEAT FLOUR; WHOLE WHEAT FLOUR; COCKTAIL SAUCE; TOMATO SAUCE; CHOP SUEY SAUCE; SOUPS—NAMELY, CHICKEN NOODLE, CHICKEN BROTH, CHICKEN BROTH WITH RICE, PUREE OF TOMATOES, CREAM OF MUSHROOM, CLAM CHOWDER, AND CONDENSED TOMATO; OLIVES; OLIVES STUFFED WITH CELERY; LIMBURGER CHEESE; PARMESAN CHEESE; JELLY; COCOA; TEA; COFFEE; SWEET PICKLES; MACARONI; NOODLES, SPAGHETTI; CANNED SPAGHETTI IN TOMATO SAUCE; CANNED BREADS; MUSHROOMS; MARSHMALLOWS; MARSHMALLOW TOPPING; HONEY; OLIVE PIMIENTO SPREAD; DESSERT SUGAR; POP CORN IN NATURAL STATE; CREAM ICING FOR FOODS; CANDY MINTS; COCOANUT; CRANBERRIES; CANNED FRUITS—NAMELY, APRICOTS, BAKED APPLES, RHUBARB, FIGS, GRAPEFRUIT, ORANGES, GRAPEFRUIT AND ORANGES, GRAPES, PEACHES, LOGANBERRIES, YOUNGBERRIES, GOOSEBERRIES, BLUEBERRIES, BLACKBERRIES, BOYSENBERRIES, CHERRIES, SPICED CRABAPPLES, PLUMS, PICKLED PLUMS, STRAWBERRIES, RASPBERRIES, PINEAPPLES, PEARS, FRUIT COCKTAIL, AND ASSORTED FRUITS FOR SALAD; DRIED PRUNES; DICED MIXED FRUITS AND PEELS; FRUIT AND VEGETABLE JUICES—NAMELY, GRAPEFRUIT, APPLE, SAUERKRAUT, ORANGE, LEMON, PRUNE, TOMATO, CHERRY, BLENDED ORANGE AND GRAPEFRUIT JUICES, CARROT, PINEAPPLE, AND LOGANBERRY; CLAM JUICE; FRUIT NECTARS—NAMELY, LOGANBERRY, PLUM, PEACH-NECTARINE, APRICOT, PEAR, AND PINEAPPLE-PEAR; CHOCOLATE SYRUP FOR FOODS; MOLASSES; AND SORGHUM.

Ser. No. 532,700. WILBERT W. HAASE CO., Forest Park, Ill. Filed Aug. 28, 1947. Under section 2f of the act of 1946.

Wilbert

Applicant claims ownership of registrations Nos. 417,669, 360,041, 394,182, 311,626, and 413,056.
FOR BURIAL VAULTS.
Claims use since Dec. 14, 1933.

Ser. No. 534,866. BABY WORLD COMPANY, INC., New York, N. Y. Filed Sept. 18, 1947.

Heat-tainer

No claim is made to the word "Heat" apart from the mark.
FOR INSULATED CONTAINERS FOR HOLDING BABY BOTTLES.
Claims use since Sept. 1, 1946.

Ser. No. 537,519. ANGELA VARONA, INC., New York, N. Y. Filed Oct. 10, 1947.

FRESH START

FOR CASE MADE FROM FABRIC AND PROVIDED WITH PARTITIONS FORMING POCKETS FOR RECEIVING CLEANSING TISSUES, LIPSTICK, AND OTHER COSMETIC ARTICLES.
Claims use since Sept. 19, 1947.

Ser. No. 538,262. FARRINGTON MANUFACTURING COMPANY, Boston, Mass. Filed Oct. 18, 1947. Under section 2f of the act of 1946.

Farrington

FOR METAL CASES, BOXES AND DISPLAY TRAYS.
Claims use since 1921.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 521,698. STEPAN CHEMICAL COMPANY, Chicago, Ill. Filed Aug. 21, 1947.

ALRYL

FOR SYNTHETIC DETERGENT AND WETTING AGENT PARTICULARLY ADAPTED FOR USE IN WASHING AND CLEANSING COMPOSITIONS.
Claims use since Apr. 1, 1947.

Ser. No. 521,699. STEPAN CHEMICAL COMPANY, Chicago, Ill. Filed Aug. 21, 1947.

SYNTONE

FOR COMPOUNDED, SYNTHETIC DETERGENT AND WETTING AGENT PARTICULARLY ADAPTED FOR USE IN WASHING AND CLEANSING COMPOSITIONS.
Claims use since Apr. 7, 1947.

Ser. No. 528,099. ASSOCIATED CHEMICAL COMPANY OF CANADA, LIMITED, Toronto, Ontario, Canada. Filed July 7, 1947.

SLIX

Applicant claims ownership of Canadian Reg. No. N. S. 17903, dated Feb. 23, 1943.
FOR CLEANSER IN SOLID OR LIQUID FORM FOR GENERAL HOUSEHOLD AND INDUSTRIAL USES.

Ser. No. 531,196. CHICAGO SANITARY PRODUCTS CO., doing business as Kleenwell Products Co., Chicago, Ill. Filed Aug. 13, 1947. Under section 2f of the act of 1946.

QUALITY KLEENWELL BRAND

Applicant disclaims the words "Quality" and "Brand."
FOR SOAP FLAKES; CREAM METAL POLISH; POWDERED CLEANSER FOR CLEANING AND SCOURING KITCHEN UTENSILS, STONE STEPS, MARBLE FLOORS, BATH TUBS AND SINKS.
Claims use since June 28, 1922.

Ser. No. 532,971. TIMESAVER PRODUCTS COMPANY, Seattle, Wash. Filed Aug. 30, 1947.

Applicant claims ownership of registrations Nos. 137,657 and 381,820.
FOR LAPPING COMPOUND.
Claims use since Mar. 10, 1919.

Ser. No. 532,972. TIMESAVER PRODUCTS COMPANY, Seattle, Wash. Filed Aug. 30, 1947.

TIMESAVER

Applicant claims ownership of registrations Nos. 137,657 and 381,820.
FOR LAPPING COMPOUND.
Claims use since Mar. 10, 1919.

Ser. No. 536,682. ESSENTIAL CHEMICALS CO., Milwaukee, Wis. Filed Oct. 3, 1947.

SOAPTHETIC

FOR SOAP.
Claims use since Sept. 12, 1947.

Ser. No. 548,466. ARMOUR AND COMPANY, Chicago, Ill. Filed Jan. 31, 1948.

TEXSCOUR

FOR SOAP.
Claims use since Sept. 19, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 491,958. THE ATLANTIC REFINING COMPANY, Philadelphia, Pa. Filed Sept. 29, 1947.

AIM

FOR RUBBER PLASTICIZER IN THE NATURE OF A PETROLEUM OIL.
Claims use since Jan. 25, 1943.

Ser. No. 507,538. PORO COLLEGE PRODUCTS COMPANY, INC., doing business as Poro College, Chicago, Ill. Filed July 5, 1947.

PORO

Applicant claims ownership of registrations Nos. 59,546 and 226,389.
FOR LIQUID AND OINTMENT PREPARATIONS FOR THE HAIR, SCALP AND TEMPLES, PRESSING OILS, SHAMPOO PREPARATIONS, BRILLIANTINE, CROQUIGNOLE OIL, COLD CREAM, VANISHING CREAM, DEODORANT, TALCUM POWDER, FACE POWDER, LIP STICK, AND ROUGE.
Claims use since Sept. 21, 1906.

Ser. No. 520,569. ROBANEL, Manhattan Beach, Calif. Filed Oct. 10, 1947.

robanel

FOR FACIAL OIL, FACIAL CREAMS, FACIAL ASTRINGENT, HAND LOTION AND A FACIAL CREAM FOUNDATION BASE FOR MAKE-UP PURPOSES.
Claims use since Mar. 31, 1947.

Ser. No. 526,554. THERMET FIRE EXTINGUISHERS, INC., Reno, Nev. Filed July 5, 1947.

Thermet

FOR CHEMICAL FIRE EXTINGUISHERS CONSISTING OF A CONTAINER OF POWDERED MATERIAL ADAPTED TO BE MANUALLY DISPENSED AND THROWN INTO THE FLAME.
Claims use since May 21, 1947.

Ser. No. 528,753. LYDIA E. PINKHAM MEDICINE COMPANY, Lynn, Mass. Filed July 16, 1947.

sedlums

FOR TABLETS FOR RELIEF OF INDIGESTION AND GASTRIC ACIDITY.
Claims use since Feb. 11, 1947.

Ser. No. 529,443. R. H. DICKSON & COMPANY, INC., Indianapolis, Ind. Filed July 25, 1947.

dri-pie

FOR MOISTURE ABSORBING RECEPTACLE CONTAINING A CHEMICAL COMPOUND FOR USE WITH A CANNISTER OR OTHER CLOSED CONTAINER IN WHICH CRACKERS, POTATO CHIPS, GINGER SNAPS, PRETZELS, POP CORN AND THE LIKE ARE KEPT FOR HOUSEHOLD USE.
Claims use since May 17, 1947.

Ser. No. 529,790. MAC'S SUPER GLOSS CO., Los Angeles, Calif. Filed July 28, 1947.

MAC'S

No claim is made to the notation "Unlucky for Rust" apart from the mark. The drawing is lined to indicate shading.
FOR PREPARATION FOR REMOVING AND PREVENTING RADIATOR RUST.
Claims use since June 1, 1947.

Ser. No. 531,188. BALDWIN PHARMACAL COMPANY, Newark, N. J. Filed Aug. 12, 1947.

POLYSULFAS

FOR SULPHA COMPOUNDS COMPRISING COMBINATIONS OF SULPHADIAZINE, SULFAMERAZINE, SULPHATHIAZOL AND SODIUM CITRATE IN TABLET AND LIQUID FORM FOR INTERNAL ADMINISTRATION FOR THE TREATMENT OF CERTAIN INFECTIONS.
Claims use since July 29, 1947.

Ser. No. 532,499. REED & CARNRICK, Jersey City, N. J. Filed Aug. 26, 1947.

Analeptine

Applicant claims ownership of registration No. 20,194.
FOR PHARMACEUTICAL PREPARATIONS FOR TREATMENT OF RHEUMATISM AND GOUTY DIATHESIS.
Claims use since 1921.

Ser. No. 533,264. ERNST BISCHOFF COMPANY, INCORPORATED, Ivoryton, Conn. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

Bischoff

Applicant claims ownership of registration No. 420,783.
FOR VITAMIN PREPARATIONS; SPECIFIC STIMULANT TO THE RESPIRATORY CENTER, VACCINES FOR INTRADERMAL INJECTION AND INTRAMUSCULAR OR SUBCUTANEOUS USE FOR THE TREATMENT OF RINGWORM OF THE SKIN, SCALP, HAIR, NAILS AND THERAPEUTIC AGENTS FOR HYPODERMIS INJECTIONS FOR THE TREATMENT OF ARTHRITIS, EPIDIDYMITIS, FYELITIS, AND MANY INFLAMMATORY CONDITIONS; TREATMENT FOR AMOEBIC DYSENTERY; PREPARATIONS FOR THE TREATMENT AND RELIEF OF RHEUMATIC AND NEURALGIC PAINS, AND THOSE ACCOMPANYING INFLUENZA AND LUMBAGO; PREPARATIONS FOR THE TREATMENT AND RELIEF OF COUGHS AND BRONCHIAL IRRITATIONS; PREPARATION FOR THE TREATMENT OF ANGINA PECTORIS AND OTHER HEART DISEASES, CIRCULATORY AILMENTS AND DISTURBANCES, AND SIMILAR DISEASES AND AILMENTS; ANTISEPTIC PREPARATION FOR GENITO-URINARY INFECTIONS AND INFECTIONS OF THE EYE, EAR, NOSE AND THROAT; OINTMENTS USED FOR INFECTIONS AND ERUPTIONS OF THE SKIN; PREPARATIONS FOR THE TREATMENT OF PSORIASIS AND ECZEMA; DIURETICS; SUPPOSITORIES; SULFANILAMIDE PREPARATIONS FOR THE TREATMENT OF STREPTOCOCCAL, GONOCOCCAL AND PNEUMOCOCCIC INFECTIONS; PREPARATIONS FOR THE TREATMENT OF BURNS; PREPARATIONS FOR THE TREATMENT OF ATHLETE'S FOOT; AND ANTACID PREPARATIONS AND VASODILATORS.
Claims use since 1924.

Ser. No. 534,532. H. D. HIGGINBOTHAM, doing business as Desert Wonder Products Company, Mentone, Calif. Filed Sept. 15, 1947.

Desert Wonder

Applicant claims ownership of registration No. 338,516.
FOR COUGH SYRUP, NASAL DROPS, RECTAL SUPPOSITORIES, TABLETS FOR THE RELIEF OF MINOR THROAT AND BRONCHIAL IRRITATIONS AND COUGHING SPASMS, TABLETS FOR THE TREATMENT OF GASTRIC DISTURBANCES, CAPSULES OF POWDERED YERBA SANTA LEAF USED AS A MILD GENERAL TONIC, MEDICATED OINTMENT FOR MINOR INFLAMED AND IRRITATED SKIN SURFACES, MEDICATED JELLY FOR TREATING SKIN IRRITATION, LIQUID SHAMPOO FOR THE HAIR.
Claims use since Apr. 7, 1936.

Ser. No. 539,034. THE DE PREE COMPANY, Holland, Mich. Filed Oct. 25, 1947.

WHEATAMIN

Applicant claims ownership of registration No. 236,281.
FOR VITAMIN PREPARATIONS IN TABLET, CAPSULE, WAFER, AND LIQUID FORMS AND DRIED YEAST CONTAINING VITAMIN B COMPLEX.
Claims use since Apr. 15, 1927.

Ser. No. 541,308. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Nov. 15, 1947.

TOPOCIDE

FOR MEDICINAL PREPARATION OF BENZYL BENZOATE COMPOUND, TOPICAL, FOR USE IN THE TREATMENT OF SCABIES AND PEDICULOSIS.
Claims use since June 2, 1947.

Ser. No. 542,476. MCNEIL LABORATORIES, INCORPORATED, Philadelphia, Pa. Filed Nov. 26, 1947.

BIDROX

FOR LIQUID PREPARATIONS USEFUL AS AN ANTACID AND ADSORBENT IN THE TREATMENT OF SYMPTOMATIC GASTRIC HYPERACIDITY.
Claims use since Aug. 10, 1945.

Ser. No. 543,917. GEIGY COMPANY, INC., New York, N. Y. Filed Dec. 10, 1947.

GYCOCIDE

Applicant claims ownership of registrations Nos. 149,067, 342,763, and 384,780.
FOR INSECTICIDES.
Claims use since Nov. 19, 1947.

Ser. No. 544,204. SAR-DA COMPANY, Dallas, Tex. Filed Dec. 12, 1947.

SAR-DA

FOR OINTMENT FOR USE IN THE TREATMENT OF SCALY SKIN DISEASES—NAMELY, PSORIASIS, ATHLETE'S FOOT, AND DRY ECZEMA.
Claims use since Oct. 17, 1947.

Ser. No. 544,916. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Dec. 19, 1947.

DELTRA

FOR PREPARATION USEFUL IN THE TREATMENT OF CONDITIONS OF THE VASCULAR SYSTEM, PARTICULARLY HYPERPIESIA AND HAVING VASODILATOR AND/OR SEDATIVE PROPERTIES.
Claims use since Nov. 24, 1947.

Ser. No. 544,917. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Dec. 19, 1947.

LYODRI

FOR VITAMIN PREPARATIONS.
Claims use since Nov. 28, 1947.

Ser. No. 544,918. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Dec. 19, 1947.

LYOTO

FOR VITAMIN PREPARATION.
Claims use since Nov. 28, 1947.

Ser. No. 544,919. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Dec. 19, 1947.

RESUSSIC

FOR PREPARATION USEFUL IN THE TREATMENT AND PREVENTION OF METABOLIC DEFICIENCIES.
Claims use since Nov. 28, 1947.

Ser. No. 550,571. WHITE LABORATORIES, INC., Newark, N. J. Filed Feb. 25, 1948.

LOZILLES

FOR MEDICATED THROAT TROCHES OR LOZENGES.
Claims use since Feb. 5, 1948.

Ser. No. 551,492. LAWRENCE E. STRAUB, doing business as Superior Products Company, Columbus, Ohio. Filed Mar. 8, 1948.

wallstrip

FOR LIQUID CHEMICAL FOR USE IN REMOVING WALLPAPER.
Claims use since Feb. 1, 1947.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 537,092. L. & H. STERN, INC., Brooklyn, N. Y. Filed Oct. 7, 1947.

FILTER KING

The word "Filter" is disclaimed.
FOR SMOKERS' PIPES, FILTERS FOR PIPES, AND CIGAR AND CIGARETTE HOLDERS MADE OF WOOD, PLASTIC AND NON-PRECIOUS METALS.
Claims use since Jan. 1, 1947.

Ser. No. 541,926. ARTHUR C. FISCHER, doing business as Gustave A. Fischer & Son, Buffalo, N. Y. Filed Nov. 21, 1947.

TEXAN

FOR SMOKING PIPES.
Claims use since Nov. 24, 1946.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 532,032. THE KING POWDER COMPANY, Cincinnati, Ohio. Filed Aug. 21, 1947.

DETONITE

FOR BLASTING HIGH EXPLOSIVES.
Claims use since 1910.

CLASS 10

FERTILIZERS

Ser. No. 531,684. N. S. KOCH & SON COMPANY, Kenosha, Wis. Filed Aug. 18, 1947.

The words "Brand" and "Fertilizer" are disclaimed apart from the mark.
FOR FERTILIZERS.
Claims use since Apr. 28, 1925.

Ser. No. 533,644. I. P. THOMAS & SON COMPANY, Camden, N. J. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

Applicant disclaims the word "Fertilizer" apart from the mark. Applicant claims ownership of registration No. 396,543.
FOR FERTILIZERS.
Claims use since Mar. 3, 1941.

Ser. No. 535,287. WEYERHAEUSER TIMBER COMPANY, Tacoma, Wash. Filed Sept. 22, 1947.

TOPPER

FOR COMMINUTED BARK OF TREES FOR USE AS A SOIL CONDITIONER AND MULCH.
Claims use since June 19, 1947.

Ser. No. 538,025. BORD NA MÓNA, Dublin, Ireland. Filed Oct. 16, 1947.

No claim is made to the words "Peat Moss Ireland."
FOR SOIL-CONDITIONING PEAT MOSS.
Claims use since Sept. 3, 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 497,182. INLAND STEEL COMPANY, Chicago, Ill. Filed July 19, 1947. Under section 2f of the act of 1946.

4-WAY

FOR NON-SLIP ROLLED STEEL FLOOR PLATE.
Claims use since 1931.

Ser. No. 527,663. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

MULTI PLATE

Applicant disclaims the word "Plate" apart from the mark shown. Applicant claims ownership of registration No. 328,058.
FOR CORRUGATED FERROUS METAL HEADWALLS, ARCHES, BACK WALLS, RETAINING WALLS, TUNNEL LINING, BRIDGE DECKING, SHEET PILING, ABUTMENT WALLS, CAR SIDING AND CAISSONS.
Claims use since Oct. 26, 1932.

Ser. No. 527,730. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

FLEX-BEAM

Applicant claims ownership of registration No. 397,211.
FOR FERROUS METAL GUARD RAILS FOR USE IN BUILDING CONSTRUCTION.
Claims use since Dec. 1, 1934.

Ser. No. 531,613. MET-L-WOOD CORPORATION, Chicago, Ill. Filed Aug. 16, 1947. Under section 2f of the act of 1946.

MET-L-WOOD

FOR LAMINATED PLYWOOD COVERED WITH STAINLESS STEEL, ALUMINUM, OR OTHER KINDS OF THIN SHEET METAL, AND WHICH IS SUPPLIED TO MANUFACTURERS FOR USE AS COMPONENT PARTS OF TRUCK BODIES, DIESEL LOCOMOTIVES, VENTILATING SYSTEMS, BULKHEADS, TABLE TOPS, INTERIORS OF HOUSES, OFFICE BUILDINGS, PULLMAN CARS, AND IN OTHER VARIOUS AND DIVERSIFIED PRODUCTS.
Claims use since June 4, 1935.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 466,694. GRINNELL CORPORATION, Providence, R. I., now by change of name from General Fire Extinguisher Company. Filed Feb. 2, 1948.

MULTITROL

FOR AUTOMATIC SPRINKLER APPARATUS FOR FIRE PROTECTION AND PARTS THEREOF—NAMELY, ADAPTERS, ALARM VALVES, AUTOMATIC RELEASES, METALLIC AIR TUBING, BALL DRIPS, CEILING PLATES, FIRE EXTINGUISHING SPRINKLERS, CHECK VALVES, COMPRESSION COUPLINGS, COMPRESSION FITTINGS, COMPENSATING VENTS, DRUM DRIPS, DELUGE VALVES, AUTOMATIC AIR RELEASING VALVES, EXPANSION JOINTS, FUSE LINKS, FLOOR PLATES, FLOOR SLEEVES, HYDRAULIC VALVES, HOSE VALVES, MANUAL PULLS, MERCURY AIR CHECKS, OUTSIDE

ALARM COVERS, PIPE HANGERS, PIPE HANGER INSERTS, PIPE, PIPE SUPPORTS, METAL PIPE FITTINGS, POST INDICATOR VALVES, ROLLER FITTINGS, SIGHT DRAINS, STEAMER CONNECTIONS, STEAMER CONNECTION CAPS, METAL DIRECTION PLATES, WALL PLATES, AND AIR SUPPLY RESPIRATORS FOR SPRINKLER PIPE APPARATUS.
Claims use since Oct. 29, 1943.

Ser. No. 523,349. BELL & GOSSETT COMPANY, Morton Grove, Ill. Filed Aug. 15, 1947.

FOR FLOW CONTROL VALVES, PRESSURE REDUCING VALVES, PRESSURE RELIEF VALVES, DUAL UNIT VALVES CONSISTING OF PRESSURE REDUCING AND PRESSURE RELIEF VALVES, WATER MIXING VALVES, AND PIPE FITTINGS FOR HOT WATER HEATING SYSTEMS.
Claims use on flow control valves since July 1, 1930; on pressure reducing valves, pressure relief valves, and dual unit valves consisting of pressure reducing and pressure relief valves since Jan. 2, 1935; on water mixing valves since Apr. 15, 1938; and on pipe fittings for hot water heating systems since Aug. 10, 1937.

Ser. No. 529,196. PARKER-KALON CORPORATION, New York, N. Y. Filed July 22, 1947.

Applicant claims ownership of registrations Nos. 320,278, 321,744, and 265,167.
FOR SCREWS, DRIVE SCREWS, DRIVE PINS, SET SCREWS, NAILS, SCREWNAILS, RIVETS, STUDS, WING-NUTS, CAP-NUTS, EXPANSION BOLTS, AND EXPANSION SLEEVES.
Claims use since Oct. 28, 1924.

Ser. No. 529,518. THE WOOSTER BRASS COMPANY, Wooster, Ohio. Filed July 25, 1947.

QUAD-WAY

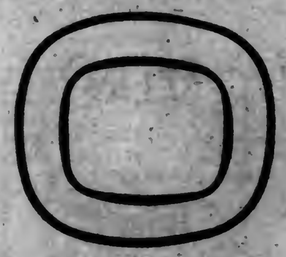
The word "Way" is disclaimed apart from the mark.
FOR NOZZLES FOR FIRE HOSE.
Claims use since September 1943.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 495,528. VANADIUM-ALLOYS STEEL COMPANY, Latrobe, Pa. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

Red Cut



Applicant claims ownership of registration No. 139,421.
FOR TOOL STEEL IN THE FORM OF HEAT TREATED BILLETS, BARS, SHEETS AND PLATES, CIRCLES, STAMPED OR CUT FROM PLATES OR SHEETS FOR USE IN FABRICATING INTO SUCH ARTICLES AS CIRCULAR SAWS, CIRCULAR KNIVES, SLITTING CUTTERS, THIN MILLING CUTTERS, AND THE LIKE; AND DISC AND RING FORGINGS FORGED ON A STEAM HAMMER, DROP HAMMER OR PRESS FROM ROLLED OR PREFORGED STOCK, FOR USE IN FABRICATING INTO MILLING CUTTERS, HOBS, BLANKING DIES, DRAWING DIES, AND THE LIKE.
Claims use since June 1, 1910.

Ser. No. 514,839. PERMACEL ALUMINUM & BRONZE CORPORATION, Waltham, Mass. Filed Sept. 22, 1947.

PAB

FOR NON-FERROUS METAL CASTINGS.
Claims use since Oct. 9, 1946.

Ser. No. 527,741. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio. Filed July 5, 1947.

Applicant claims ownership of registration No. 351,496.
FOR FERROUS METALS AND FERROUS METAL CASTINGS AND FORGINGS.
Claims use since Mar. 10, 1941.

Ser. No. 528,482. JONES & LAUGHLIN STEEL CORPORATION, Pittsburgh, Pa. Filed July 12, 1947.

JALCOLD

FOR SHEET METAL.
Claims use since November 1939.

Ser. No. 530,328. MILWAUKEE FORGE & MACHINE CO., Milwaukee, Wis. Filed Aug. 2, 1947.

MF

FOR FORGINGS.
Claims use since Jan. 1, 1923.

Ser. No. 532,026. KENDALLVILLE FOUNDRY, INC., Kendallville, Ind. Filed Aug. 21, 1947.

KENDALLOY

FOR UNFINISHED FERROUS METAL CASTINGS.
Claims use since October 1945.

Ser. No. 534,759. EMPIRE STEEL CORPORATION, Mansfield, Ohio. Filed Sept. 17, 1947.

The words "Steel Sheets" are disclaimed apart from the mark. The drawing is lined for the color orange.
FOR STEEL SHEETS.
Claims use since Jan. 3, 1935.

CLASS 15

OILS AND GREASES

Ser. No. 529,256. FISKE BROTHERS REFINING CO., Newark, N. J. Filed July 23, 1947.

The drawing is lined for the colors black and silver. No claim is made to the exclusive use of the words "Prevents Wear and Corrosion" and "Super-Lubrication," apart from the mark. Applicant claims ownership of registrations Nos. 287,745 and 231,805.
FOR LUBRICATING OILS AND GREASES.
Claims use since Aug. 8, 1935.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 529,778. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947.

EMANELO

Applicant claims ownership of registration No. 155,491.
FOR CIGARS, CHEROOTS, CIGARETTES, SMOKING AND CHEWING TOBACCO.
Claims use since Jan. 1, 1904.

Ser. No. 539,179. LARUS & BROTHER COMPANY, INC., Richmond, Va. Filed Oct. 27, 1947.

"GATORS"

FOR TOBACCO AND TOBACCO PRODUCTS—NAMELY, SMOKING TOBACCO, CHEWING TOBACCO, CIGARS, CIGARETTES, AND SNUFF.
Claims use since Aug. 12, 1947.

Ser. No. 541,585. A. SENSENBRENNER SONS, Los Angeles, Calif. Filed Nov. 18, 1947.

Applicant claims ownership of registrations Nos. 374,461 and 374,462.
FOR CIGARS.
Claims use since Mar. 31, 1939.

Ser. No. 541,586. A. SENSENBRENNER SONS, Los Angeles, Calif. Filed Nov. 18, 1947.

Applicant claims ownership of registrations Nos. 374,462 and 374,461.
FOR CIGARS.
Claims use since Mar. 31, 1939.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 512,135. RAYTHEON MANUFACTURING COMPANY, Newton, Mass. Filed Nov. 6, 1946.

Raytherm

FOR GENERAL PURPOSE DIELECTRIC HEATERS OF THE TYPE IN WHICH A PLURALITY OF ELECTRODES ARE SPACED TO RECEIVE THEREBETWEEN WORK TO BE HEATED BY ELECTROSTATIC INDUCTION RESULTING FROM THE APPLICATION TO SAID ELECTRODES OF HIGH-FREQUENCY ENERGY OF THE ORDER OF SEVERAL MEGACYCLES PER SECOND OR MORE.

Claims use since Mar. 5, 1946.

Ser. No. 528,857. GENERAL ELECTRIC COMPANY, Schenectady, N. Y. Filed July 18, 1947.

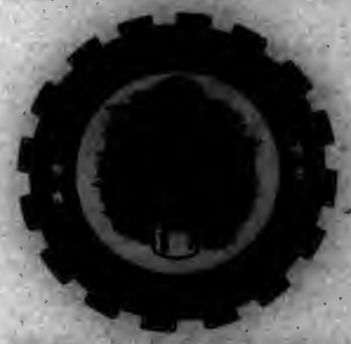
NELA

The lining of the circumferential band is for the purpose of indicating shading. No claim is made to the representation of an electric lamp apart from the mark shown. Applicant claims ownership of registration No. 118,028.

FOR ELECTRIC LAMP BULBS.

Claims use since June 5, 1915.

Ser. No. 534,915. NUTONE, INCORPORATED, Chicago, Ill. Filed Sept. 18, 1947.



NUTONE

Applicant claims ownership of registration No. 355,825.

FOR HOME ELECTRIC DOOR CHIMES, DOOR SIGNALS AND INTEROFFICE CHIME AND BUZZER SIGNALLING APPARATUS, PUSH BUTTONS AND TRANSFORMERS.

Claims use since Feb. 23, 1937.

Ser. No. 535,939. STEWART R. BROWNE MFG. CO., INC., New York, N. Y. Filed Sept. 27, 1947.

No claim is made to the exclusive right of the representation of the electric bulb apart from the mark. Applicant claims ownership of registration No. 423,556.

FOR FLASH LIGHTS, ELECTRIC-VAPOR AND/OR EXPLOSIVE-PROOF EXTENSION. LIGHTS, STATIC ELIMINATORS, AND ELECTRIC FLASHER BEACONS.

Claims use since Aug. 21, 1945.

Ser. No. 536,843. SIGHTMASTER CORP., New York, N. Y. Filed Oct. 4, 1947.

Sightmaster

FOR TELEVISION RECEIVERS.

Claims use since Sept. 10, 1947.

Ser. No. 539,190. MARTIN ELECTRIC CORPORATION, doing business as Martin Electric Company, Detroit, Mich. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

MARTIN

FOR WELDING TRANSFORMERS, PORTABLE ELECTRIC SPOT WELDING GUNS, AND RESISTANCE WELDING APPARATUS.

Claims use since Jan. 1, 1927.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 534,138. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

Heddon-Dowagiac

Applicant claims ownership of registration No. 142,675.

FOR FISH LURES, FISHING RODS, AND FISHING REELS.

Claims use since January 1899.

Ser. No. 535,268. KENNETH SMITH, Kansas City, Mo. Filed Sept. 22, 1947.

Ken

FOR GOLF CLUBS AND PARTS OF GOLF CLUBS PARTICULARLY: GOLF CLUB SHAFT CAPS, GOLF CLUB SHAFT END PLUGS; RUBBER GRIPS FOR GOLF CLUB SHAFTS; PERFORATED AND PLAIN LEATHER GRIPS FOR GOLF CLUB SHAFTS; CORK LISTING FOR LEATHER GOLF CLUB SHAFT GRIPS; STEEL GOLF CLUB SHAFTS; WOOD SHAFTS FOR GOLF CLUBS; INSERT FACES FOR WOOD GOLF CLUB HEADS; GOLF CLUB WHIPPING CORD; AND SHEATHING FOR ZONE OF JUNCTURE BETWEEN GOLF CLUB HEAD AND ITS SHAFT.

Claims use since Feb. 1, 1945.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 466,930. HERBERT W. PUSHECK, Chicago, Ill. Filed July 5, 1947.

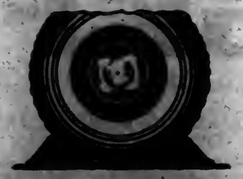
"Packers' Pal"

No claim is made to any right of registration under the Federal statute of the word "Packers."

FOR CORRUGATED PAPER CUTTERS, GUMMED TAPE DISPENSING MACHINES, GENERAL UTILITY SHIPPING ROOM KNIVES AND DEVICES FOR USE IN OPENING CARTONS OF VARIOUS KINDS.

Claims use since Jan. 13, 1944.

Ser. No. 506,563. WEB WILSON OIL TOOLS INC., assignee Web Wilson Oil Tools Company, Huntington Park, Calif. Filed July 5, 1947.



W OIL TOOLS

No claim is made to the words "Oil Tools" apart from the mark.

FOR TONG SPRINGS, TONG DIES AND TONG PINS.

Claims use since April 1940.

Ser. No. 508,292. R. W. KERR CO., Hastings, Nebr., assignor to R. W. Kerr Plastic Co., Hastings, Nebr., a corporation of Nebraska. Filed July 5, 1947.

ROL-BLOC

Applicant disclaims the term "Bloc" and the representation of the wedges.

FOR AUTOMOBILE ACCESSORIES—NAMELY, WHEEL WEDGES.

Claims use since July 20, 1946.

Ser. No. 527,365. SUPERIOR SEPARATOR COMPANY, Hopkins, Minn. Filed July 5, 1947. Under section 2f of the act of 1946.

SUPERIOR

The drawing is lined for the colors red and gray.

Applicant claims ownership of registration No. 401,088.

FOR GRAIN CLEANING, SCALPING, AND SEPARATING MACHINERY, GRADERS, AND STACKERS.

Claims use since July 1929.

Ser. No. 529,098. S K F INDUSTRIES, INC., Philadelphia, Pa., and elsewhere. Filed July 21, 1947.

SKF

Applicant claims ownership of registrations Nos. 211,632 and 103,634.

FOR BALL BEARINGS, ROLLER BEARINGS, PARTS THEREOF AND MOUNTING ACCESSORIES THERETO, BEARING RINGS FOR SHEET ROLLING MILLS, HOUSINGS, COMPRISING PILLOW BLOCKS, CHUCKS, SUPPORTS, CASINGS, CLOSURES, HANGERS, TAKE-UP BOXES AND LIDS AND END COVERS THEREFOR FOR BALL AND ROLLER BEARINGS, PULLEYS, TENSION PULLEYS, TEXTILE SPINDLES, SHAFT BOXES, SHAFT COUPLINGS, OIL MIST LUBRICATORS.

Claims use since Mar. 31, 1907, for ball bearings, roller bearings, parts thereof and mounting accessories thereto, housings, boxes, closures, supports and casings for ball and roller bearings, pulleys, and textile spindles; since on or before Jan. 1, 1921, for pillow blocks for ball and roller bearings; since on or before Jan. 1, 1925, for lids and end covers; since on or before Jan. 1, 1928, for shaft boxes; since on or before Jan. 1, 1931, for tension pulleys; since on or before Jan. 1, 1935, for bearing rings for sheet rolling mills; since on or before Jan. 1, 1946, for oil mist lubricators; and since on or before Jan. 1, 1947, for shaft couplings.

Ser. No. 529,102. S K F INDUSTRIES, INC., Philadelphia, Pa. Filed July 21, 1947.

SKF

Applicant claims ownership of registrations Nos. 103,634 and 212,212.

FOR BALL BEARINGS, ROLLER BEARINGS, PARTS THEREOF AND MOUNTING ACCESSORIES THERETO, BEARING RINGS FOR SHEET ROLLING MILLS, HOUSINGS, COMPRISING PILLOW BLOCKS, CHUCKS, SUPPORTS, CASINGS, CLOSURES, HANGERS, TAKE-UP BOXES AND LIDS AND END COVERS THEREFOR FOR BALL AND ROLLER BEARINGS, PULLEYS, TENSION PULLEYS, TEXTILE SPINDLES, SHAFT BOXES, SHAFT COUPLINGS, OIL MIST LUBRICATORS.

Claims use since Mar. 31, 1907, for ball bearings, roller bearings, parts thereof and mounting accessories thereto, housings, boxes, closures, supports and casings for ball and roller bearings, pulleys, and textile spindles; since on or before Jan. 1, 1921, for pillow blocks for ball and roller bearings; since on or before Jan. 1, 1925, for lids and end covers; since on or before Jan. 1, 1928, for shaft boxes; since on or before Jan. 1, 1931, for tension pulleys; since on or before Jan. 1, 1935, for bearing rings for sheet rolling mills; since on or before Jan. 1, 1946, for oil mist lubricators; and since on or before Jan. 1, 1947, for shaft couplings.

Ser. No. 530,720. THE CINCINNATI TOOL COMPANY, Norwood, Ohio. Filed Aug. 7, 1947.

MAXIMIN

FOR C-CLAMPS.
Claims use since Apr. 27, 1946.

Ser. No. 554,940. SOUTHERN IRON & EQUIPMENT COMPANY, Atlanta, Ga. Filed May 27, 1948.

"SIECO"

FOR FARM IMPLEMENTS—NAMELY, DISC PLOWS, SUB-SOILERS, DISC HARROWS, SCOOPS, PLANTERS, CULTIVATORS AND BULLDOZERS.
Claims use since October 1945.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 541,852. MANITOWOC COTTON GOODS MFG. CO., Manitowoc, Wis. Filed Nov. 20, 1947.

SAMSONITE

FOR BUTTON PROTECTOR AND/OR LIKE PAD FOR USE IN LAUNDERING AND DRY-CLEANING AND OTHER MACHINES.
Claims use since Sept. 19, 1947.

CLASS 25

LOCKS AND SAFES

Ser. No. 537,137. E. J. BROOKS COMPANY, Newark, N. J. Filed Oct. 8, 1947.

SPEEDLOCK

FOR CORDING SEALS MADE OF BASE METAL.
Claims use since Oct. 26, 1934.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 527,892. TALON, INC., Meadville, Pa. Filed July 5, 1947.

TALON

Applicant claims ownership of registrations Nos. 242,748, 250,113, 270,090, 270,773, 271,179, 271,679, 273,995, 319,000, and 415,418.

FOR BINOCULAR CASES AND CAMERA CASES.
Claims use since July 2 1947.

Ser. No. 528,812. THE ROBINSON HOUCHIN OPTICAL COMPANY, Columbus, Ohio. Filed July 10, 1947.

The stippling shown on the drawing is for the purpose of indicating shading only.

FOR OPHTHALMIC LENSES.
Claims use since Jan. 1, 1941.

Ser. No. 534,429. JACK GALTER, Chicago, Ill. Filed Sept. 13, 1947.

SPARTUS

FOR CAMERAS.
Claims use since Oct. 10, 1933.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 543,329. THE SESSIONS CLOCK COMPANY, Forestville, Conn. Filed Dec. 4, 1947.

Sessions

Applicant claims ownership of registration No. 205,392.

FOR CLOCKS, CLOCK-MOVEMENTS AND PARTS THEREOF.
Claims use since July 25, 1902.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 527,904. MADSEN IRON WORKS, Huntington Park, Calif. Filed July 5, 1947. Under section 2f of the act of 1946.

MADSEN

FOR RESTAURANT FIXTURES—NAMELY, STOOL BASES AND TABLE BASES FOR PEDESTAL TYPE STOOLS AND TABLES.
Claims use since 1920.

Ser. No. 528,458. THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio. Filed July 12, 1947.

SER-V-OMATIC

FOR DISPLAY STANDS FOR SUPPORTING STORE MERCHANDISE.
Claims use since April 1947.

Ser. No. 529,456. THE GENERAL FIREPROOFING COMPANY, Youngstown, Ohio. Filed July 25, 1947.

GF

Applicant claims ownership of registrations Nos. 281,855, 101,513, and 280,715.

FOR STORE, HOSPITAL, LABORATORY, OFFICE, LIBRARY, BANK, HOTEL, RESTAURANT, CLUB, SHIP, TRAIN, AIRCRAFT, FACTORY AND WAREHOUSE FURNITURE—NAMELY, FILES, FILING CABINETS, TRANSFER CASES, STORAGE CABINETS, MAP AND PLAN CASES, BOOK CASES, LOCKERS AND WARDROBES, COSTUMERS, DESK TRAYS, CASH DRAWERS, STORAGE DRAWERS, COUNTERS, DESKS, TABLES, TYPEWRITER STANDS, CHAIRS, STOOLS, SETTEES, SHELVING UNITS, STORAGE RACKS, DISPLAY CASES AND COUNTERS, AND PARTS CABINETS.
Claims use since Apr. 29, 1931.

Ser. No. 531,621. GORDON ORRIG ASSOCIATES, INC., New York, N. Y. Filed Aug. 19, 1947.

The word "American" is disclaimed apart from the mark as shown.

Reg. No. 229,378. Registered June 28, 1927. THE ODELL COMPANY, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

The words "The Odell Company, Newark, N. J." are disclaimed.
FOR HAIR TONIC AND HAIR DRESSING.
Claims use since July 13, 1926.

Reg. No. 230,625. Registered Aug. 2, 1927. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

Bismarsen

FOR BISMUTH ARSPHENAMINE SULPHONATE.
Claims use since Feb. 14, 1927.

Reg. No. 240,361. Registered Mar. 27, 1928. THE ODELL COMPANY, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

FOR HAIR TONIC, SHAMPOO, TOILET WATER, TALCUM POWDER.
Claims use since July 15, 1917.

Reg. No. 254,582. Registered Mar. 26, 1929. SWAN-MYERS COMPANY, Indianapolis, Ind. Republished by Abbott Laboratories, North Chicago, Ill., a corporation of Illinois.

MAMMOL

FOR A DRESSING FOR THE NIPPLES OF NURSING MOTHERS.
Claims use since Aug. 6, 1928.

Reg. No. 266,357. Registered Jan. 14, 1930. GOLD BOND STERILIZING POWDER CO. INC., Fairhaven, Mass., a corporation of Maine. Republished by registrant, present location New Bedford and Fairhaven, Mass.

GOLD BOND

FOR TOILET POWDER.
Claims use since May 12, 1908.

Reg. No. 271,168. Registered May 27, 1930. ABBOTT LABORATORIES, Chicago, Ill., a corporation of Illinois. Republished by registrant, present location North Chicago, Ill.

METAPHEDRIN

FOR NOSE AND THROAT SPRAY HAVING ANTISEPTIC AND SHRINKING ACTION IN CASES OF INFECTION AND CONGESTION.
Claims use since Jan. 1, 1928.

Reg. No. 273,954. Registered Aug. 19, 1930. HARRY H. MYERS, doing business as Sure-Shot Laboratories, Mobile, Ala. Republished by registrant.

FOR PREPARATION FOR TREATMENT OF DANDRUFF.
Claims use since Nov. 15, 1929.

Reg. No. 274,679. Registered Sept. 2, 1930. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

DIGESTASE

FOR COMPOSITION COMPOSED OF HIGHLY CONCENTRATED SOLUTION OF PURIFIED ENZYMES INDICATED IN CASES OF FUNCTIONAL INACTIVITY ON THE PART OF THE ALIMENTARY TRACT.
Claims use since 1912.

Reg. No. 275,570. Registered Sept. 23, 1930. ABBOTT LABORATORIES, Chicago, Ill., a corporation of Illinois. Republished by registrant, present location North Chicago, Ill.

SYRUP CITREX

The word "Syrup" is disclaimed.
FOR COUGH SYRUP.
Claims use since Mar. 20, 1930.

Reg. No. 276,449. Registered Oct. 21, 1930. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

CREAM

FOR SIZING USED FOR PAPER PURPOSES.
Claims use since Jan. 15, 1930.

Reg. No. 276,644. Registered Oct. 21, 1930. SWAN-MYERS COMPANY, Indianapolis, Ind. Republished by Abbott Laboratories, North Chicago, Ill., a corporation of Illinois.

LUCRETINA

FOR POWDER FOR ANTISEPTIC SOLUTIONS.
Claims use since June 3, 1930.

Reg. No. 281,642. Registered Mar. 24, 1931. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

METOSO

FOR ANTISEPTIC AND GERMICIDE FOR USE AS A MOUTH WASH, NASAL SPRAY, OR GARGLE AND AS A FIRST-AID APPLICATION TO WOUNDS.
Claims use since Oct. 1, 1930.

Reg. No. 285,003. Registered July 14, 1931. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

NEMBUTAL

FOR HYPNOTIC SEDATIVE ANESTHETIC COMPOUND.
Claims use since Sept. 29, 1930.

Reg. No. 289,040. Registered Nov. 17, 1931. LEA'S PHARMACY, doing business as Lea Brothers, Chemists, New Orleans, La. Republished by Altone Chemical Company, Inc., New Orleans, La., a corporation of Louisiana.

FOR ATHLETE'S FOOT MEDICINE.
Claims use since May 1, 1931.

Reg. No. 289,514. Registered Dec. 1, 1931. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

ELASTIC

The drawing is lined for shading only.
FOR STARCH.
Claims use since 1881.

Reg. No. 290,171. Registered Dec. 22, 1931. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

The drawing is lined for shading only.
FOR STARCH.
Claims use since 1881.

Reg. No. 290,203. Registered Dec. 22, 1931. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

ELASTIC

FOR LAUNDRY STARCH.
Claims use since 1881.

Reg. No. 290,568. Registered Jan. 12, 1932. THE HUBINGER CO., Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

QUICK
ELASTIC
HOT STARCH
IN 30 SECONDS

The drawing is lined for the color red. The lining on the representation of the flat iron is for shading only. The words "Quick," "Hot Starch in 30 Seconds," are disclaimed.
FOR STARCH.
Claims use since Feb. 28, 1931.

Reg. No. 292,778. Registered Mar. 29, 1932. THE ODELL CO., INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

RID-ZIT
TRADE MARK

The words "Trade Mark" are disclaimed.
FOR A TREATMENT FOR DANDRUFF APPLIED AS A HAIR TONIC.
Claims use since Jan. 15, 1930.

Reg. No. 294,692. Registered June 7, 1932. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

HALIVER

FOR FISH LIVER OILS USED AS ACCESSORY NUTRITIONAL FACTORS.
Claims use since Jan. 2, 1932.

Reg. No. 310,989. Registered Mar. 13, 1934. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SALIHEXIN

FOR ANTIRHEUMATIC AND ANTIPYRETIC COMPOUND.
Claims use since Apr. 15, 1925.

Reg. No. 314,664. Registered July 3, 1934. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

STAY CREAM

The word "Cream" is disclaimed.
FOR SIZING FOR PAPER.
Claims use since Apr. 14, 1931.

Reg. No. 315,726. Registered Aug. 7, 1934. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

H·M·C

FOR ANESTHETIC AND ANALGESIC.
Claims use since February 1907.

Reg. No. 318,144. Registered Oct. 16, 1934. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

THALOSEN

FOR LAXATIVE COMPOUND.
Claims use since on or about Aug. 31, 1909.

Reg. No. 319,660. Registered Dec. 4, 1934. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

DIXIE MILL

FOR STARCHES USED IN THE TEXTILE TRADE.
Claims use since June 4, 1934.

Reg. No. 326,018. Registered July 9, 1935. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Phe-Ni-Mer

FOR NON-POISONOUS, ANTISEPTIC, GERMICIDE AND FUNGICIDE SOLUTION CONTAINING PHENOL, MERCURY AND SILVER NITRATE (1 TO 3000 DILUTION); A SURGICAL SOLUTION CONTAINING THE SAME INGREDIENTS IN COMBINATION WITH ALCOHOL AND ACETONE, AND FOR A COMPOUND OF PHENOL, MERCURY AND SILVER NITRATE, BOTH IN CONCENTRATED TABLET AND IN OINTMENT FORMS.
Claims use since Feb. 15, 1935.

Reg. No. 334,340. Registered Apr. 28, 1936. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

PENTOTHAL

FOR A PHARMACEUTICAL PRODUCT HAVING HYPNOTIC, SEDATIVE, AND ANESTHETIC PROPERTIES.
Claims use since Nov. 15, 1935.

Reg. No. 334,367. Registered Apr. 28, 1936. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

GLUCOPHYLLINE

FOR COMPOUND HAVING HEART STIMULANT AND DIURETIC ACTION.
Claims use since Sept. 20, 1935.

Reg. No. 336,494. Registered July 7, 1936. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

VITA-KING

FOR NUTRITIONAL PRODUCT CONTAINING VITAMINS.
Claims use since Dec. 20, 1935.

Reg. No. 338,986. Registered Sept. 22, 1936. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

ALDARSONE

FOR BACTERICIDES.
Claims use since May 1, 1935.

Reg. No. 341,418. Registered Dec. 8, 1936. FRED R. WALLICH, Los Angeles, Calif. Republished by registrant.

ULTRA-SEPT

FOR ANTISEPTIC OIL FOR THE TREATMENT OF SUPERFICIAL CUTS, BURNS, SUNBURN, INSECT BITES, RASHES, MYCOTIC FUNGUS, AND BACTERIAL SKIN INFECTIONS.
Claims use since May 6, 1936.

Reg. No. 343,177. Registered Feb. 9, 1937. EASTERN TRADING CO., Chicago, Ill., a copartnership. Republished by registrant.

LUCKY NUMBER

FOR INCENSE.
Claims use since Apr. 5, 1934.

Reg. No. 343,912. Registered Mar. 9, 1937. ADDRESSO-GRAPH-MULTIGRAPH CORPORATION, Euclid Village, Cleveland, Ohio, a corporation of Delaware. Republished by registrant, present location Cleveland, Ohio.

FOR CHEMICALS FOR USE IN PLANOGRAPHIC PRINTING.
Claims use since about January 1934.

Reg. No. 343,969. Registered Mar. 9, 1937. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

AMDELATE

FOR MEDICINAL SYRUP CONTAINING AMMONIUM MANDELATE USED AS A URINARY ANTISEPTIC.
Claims use since July 10, 1936.

Reg. No. 344,869. Registered Apr. 6, 1937. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

LOOKASINE

FOR VAGINAL DOUCHE POWDER, INTENDED TO BE DISSOLVED IN WATER BEFORE USE.
Claims use since 1929.

Reg. No. 346,822. Registered June 8, 1937. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

CALCIDRINE

FOR SYRUP FOR USE AS A SEDATIVE AND EXPECTORANT IN COUGHS DUE TO COLDS.
Claims use since Oct. 11, 1934.

Reg. No. 348,148. Registered July 20, 1937. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

BISMOL

FOR SOLUTION HAVING MEDICINAL PROPERTIES AND INTENDED FOR USE IN THE TREATMENT OF SYPHILIS AND SIMILAR DISEASES.
Claims use since about 1927.

Reg. No. 353,675. Registered Jan. 11, 1938. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

IBERIN

FOR PRODUCT FOR ORAL ADMINISTRATION IN THE TREATMENT OF ANEMIA.
Claims use since Aug. 2, 1937.

Reg. No. 353,676. Registered Jan. 11, 1938. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

ISOHALANT

FOR ISOTONIC AQUEOUS SOLUTION FOR RELIEVING CONGESTION OF THE MUCOUS MEMBRANE OF THE RESPIRATORY TRACT.
Claims use since Aug. 1, 1937.

Reg. No. 358,110. Registered June 28, 1938. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

MONOLATE

FOR ANODYNE AND SCLEROSING SOLUTION.
Claims use since Aug. 25, 1937.

Reg. No. 358,684. Registered July 19, 1938. C. F. BURGESS LABORATORIES, INC., Chicago, Ill. Republished by Research Products Corporation, Madison, Wis., a corporation of Wisconsin.

ALKALEX

FOR GRANULAR MATERIAL FOR CHEMICALLY SOFTENING AND CONDITIONING WATER.
Claims use since Feb. 26, 1938.

Reg. No. 361,214. Registered Oct. 11, 1938. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

CENOLATE

FOR VITAMIN C PREPARATION OF CEVITAMIC ACID FOR PARENTERAL USE.
Claims use since Dec. 20, 1937.

Reg. No. 363,628. Registered Jan. 3, 1939. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

ARGENTAL

FOR ANTISEPTIC (SPECIFICALLY A COMPOUND CONTAINING COLLOIDAL SILVER BROMIDE).
Claims use since 1919.

Reg. No. 365,858. Registered Mar. 21, 1939. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Theopropanol

FOR TABLETS TO BE TAKEN INTERNALLY INTO THE STOMACH AND AMPULES USED FOR INTRAMUSCULAR AND INTRAVENOUS INJECTION IN THE TREATMENT OF ANGINA PECTORIS, CORONARY THROMBOSIS, CARDIAC EDEMA, ESSENTIAL HYPERTENSION AND IN ANY CONDITION IN WHICH A VASODILATING OR A CORONARY DILATING ACTION IS DESIRED.
Claims use since on or about Oct. 1, 1937.

Reg. No. 365,899. Registered Mar. 21, 1939. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

OLADAL

FOR FISH LIVER OIL FORTIFIED WITH VITAMIN D.
Claims use since Dec. 23, 1937.

Reg. No. 366,212. Registered Apr. 4, 1939. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

KLOTOGEN

FOR VITAMIN K PREPARATION.
Claims use since Oct. 3, 1938.

Reg. No. 366,245. Registered Apr. 4, 1939. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

NICAMIN

FOR PREPARATION OF NICOTINIC ACID.
Claims use since Mar. 8, 1938.

Reg. No. 371,223. Registered Sept. 19, 1939. THE COWLES DETERGENT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DRYMET

FOR FUSED ALKALI SILICATE CONSISTING PRINCIPALLY OF SODIUM METASILICATE USEFUL IN NEUTRALIZING ACIDS, CLEANING, OR SOAP AND DETERGENT MANUFACTURE WHEREVER A CONCENTRATED ALKALI SILICATE IS REQUIRED.
Claims use since Mar. 7, 1939.

Reg. No. 377,523. Registered May 7, 1940. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

ZYLCAINE

FOR RECTAL ANESTHETIC.
Claims use since Oct. 14, 1939.

Reg. No. 382,006. Registered Oct. 15, 1940. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

KAYQUINONE

FOR PRODUCT HAVING THE PROPERTIES OF VITAMIN K.
Claims use since Apr. 23, 1940.

Reg. No. 382,502. Registered Oct. 29, 1940. FRANCES DENNEY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

"Three-on-a-Match"

FOR TOILET PREPARATIONS—NAMELY, LIPSTICKS.
Claims use since Apr. 27, 1940.

Reg. No. 382,795. Registered Nov. 12, 1940. FRED R. WALLICH, Los Angeles, Calif. Republished by registrant.

TINE

FOR GERMICIDE.
Claims use since May 1938.

Reg. No. 383,808. Registered Dec. 24, 1940. THE PENNZOIL COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

NuZip

FOR A CHEMICAL PREPARATION USED FOR THE REMOVAL OF GUM, VARNISH, AND SLUDGE DEPOSITS IN INTERNAL COMBUSTION ENGINE CYLINDERS AND ASSOCIATED PARTS.
Claims use since June 1, 1939.

Reg. No. 383,910. Registered Dec. 24, 1940. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

NEMBU-FEDRIN

FOR A PRODUCT FOR THE TREATMENT OF HAY FEVER AND ASTHMA.
Claims use since Aug. 16, 1940.

Reg. No. 384,063. Registered Jan. 7, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

B-Compules

The letter "B" is disclaimed.
FOR PREPARATIONS CONTAINING THE VITAMIN B COMPLEX.
Claims use since Aug. 8, 1939.

Reg. No. 386,330. Registered Apr. 1, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

NATOPHEROL

FOR VITAMIN PREPARATION.
Claims use since Nov. 20, 1940.

Reg. No. 386,603. Registered Apr. 15, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

RONONE

FOR MEDICINAL COMPOUND USED IN THE TREATMENT OF CERTAIN SKIN DISORDERS.
Claims use since Dec. 13, 1940.

Reg. No. 387,077. Registered Apr. 29, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

THIURIDE

FOR VETERINARY PREPARATION FOR TREATMENT OF MANGE.
Claims use since Dec. 24, 1940.

Reg. No. 389,109. Registered July 22, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SURPLEX

FOR A VITAMIN PREPARATION.
Claims use since Mar. 21, 1941.

Reg. No. 389,110. Registered July 22, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SYNTOPHEROL

FOR VITAMIN PREPARATION.
Claims use since Mar. 21, 1941.

Reg. No. 390,357. Registered Sept. 23, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

DICAL-D

The letter "D" is disclaimed.
FOR MEDICINAL WAFERS CONTAINING DICALCIUM PHOSPHATE AND VIOSTEROL.
Claims use since Dec. 28, 1937.

Reg. No. 391,815. Registered Oct. 28, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

HYDROSORB

FOR OINTMENT BASE.
Claims use since June 20, 1941.

Reg. No. 391,816. Registered Oct. 28, 1941. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

BEJECTAL

FOR INJECTABLE SOLUTION OF VITAMIN B COMPLEX COMPONENTS.
Claims use since June 20, 1941.

Reg. No. 393,197. Registered Jan. 27, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

KOFREDENE

FOR COUGH SYRUP.
Claims use since September 1939.

Reg. No. 393,202. Registered Jan. 27, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

A-C

FOR MEDICINAL TROCHES FOR THE CONTROL OF SIMPLE COUGHS DUE TO THROAT IRRITATION AND DRYNESS OF THE THROAT.
Claims use since Oct. 30, 1931.

Reg. No. 393,496. Registered Feb. 17, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

PARA-SYLLIUM

The word "Syllium" is disclaimed.
FOR INTESTINAL LUBRICANT AND LAXATIVE.
Claims use since Aug. 8, 1941.

Reg. No. 395,324. Registered May 19, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

MYALETE

FOR ANTIMYCOTIC POWDER INDICATED IN THE TREATMENT AND PREVENTION OF ATHLETE'S FOOT.
Claims use since Jan. 20, 1942.

Reg. No. 398,549. Registered Nov. 3, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SULFAPAC

FOR ANTIBACTERIAL AGENT FOR USE IN BODY CAVITIES.
Claims use since June 19, 1942.

Reg. No. 398,554. Registered Nov. 3, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

NICOTHIAMIN

FOR VITAMIN PREPARATION.
Claims use since Apr. 14, 1941.

Reg. No. 398,960. Registered Dec. 8, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

STERILOPE

FOR DRUGS INDICATED FOR TOPICAL APPLICATION AT THE SITE OF AN INFECTION OR POTENTIAL INFECTION WHERE A BACTERIOSTATIC OR BACTERICIDAL EFFECT IS DESIRED.
Claims use since Oct. 28, 1941.

Reg. No. 400,453. Registered Mar. 9, 1943. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SULVETIL

FOR SUSPENSION OF A SULFONAMIDE IN OIL FOR USE AS A VETERINARY ANTISEPTIC.
Claims use since Oct. 6, 1942.

Reg. No. 401,385. Registered May 11, 1943. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

VATOX

FOR PRODUCT, WHICH COMPRISES THE COMBINATION OF A BACTERIAL VACCINE AND A TOXOID, WHICH, WHEN INJECTED INTO THE PATIENT, PRODUCES AND/OR STIMULATES ANTITOXIC AND ANTIBACTERIAL SUBSTANCES.
Claims use since on or about Feb. 1, 1940.

Reg. No. 402,289. Registered July 13, 1943. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SULFEDEX

FOR ANTISEPTIC PREPARATION CONTAINING SULFONAMIDE TO BE USED AS AN INHALANT AND MEDICINAL JELLY.
Claims use since Nov. 27, 1942.

Reg. No. 402,978. Registered Aug. 24, 1943. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ALLANTOMIDE

FOR PRODUCT, WHICH COMPRISES AN OINTMENT, CONTAINING ALLANTOIN AND SULFANILIMIDE FOR USE IN COMBATTING AND PREVENTING INFECTION FROM PYOGENIC ORGANISMS IN COMPOUND FRACTURES, CONTAMINATED AND CLEAN SURGICAL WOUNDS, AND IN DENTISTRY, WHILE ACCELERATING RESPONSE OF THE GRANULATION TISSUES.
Claims use since on or about July 30, 1941.

Reg. No. 403,427. Registered Sept. 21, 1943. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SULF-OPTO

FOR BACTERIOSTATIC AGENT CONTAINING A SULFONAMIDE.
Claims use since May 6, 1943.

Reg. No. 404,464. Registered Nov. 23, 1943. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

MANARTAL

FOR A SEDATIVE OR MILD HYPNOTIC VASODILATOR.
Claims use since July 3, 1943.

Reg. No. 406,158. Registered Mar. 14, 1944. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

STILRONATE

FOR VETERINARY SYNTHETIC ESTROGENIC PREPARATION.
Claims use since Aug. 17, 1943.

Reg. No. 407,420. Registered June 6, 1944. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

DIASONE

FOR BACTERIOSTATIC SULFONE COMPOUND.
Claims use since July 30, 1943.

Reg. No. 408,238. Registered Aug. 1, 1944. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

BECLYSYL

FOR MEDICINAL PREPARATION IN LIQUID FORM FOR REPLACING BODY FLUIDS AND SUPPLYING NECESSARY VITAMINS BY VENOCYLSIS.
Claims use since Mar. 24, 1942.

Reg. No. 409,834. Registered Oct. 24, 1944. THE ODELL COMPANY, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

Tonator

FOR SHAMPOO AND DANDRUFF TREATMENT.
Claims use since June 1939.

Reg. No. 410,677. Registered Dec. 12, 1944. THE ODELL COMPANY, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

Trol

FOR HAIR TONIC.
Claims use since April 1942.

Reg. No. 411,242. Registered Jan. 9, 1945. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

TRYNAZIN

FOR RECTAL OINTMENT.
Claims use since June 24, 1944.

Reg. No. 412,378. Registered Mar. 6, 1945. MAYFLOWER GAS CORP., Portland, Maine, a corporation of Maine. Republished by registrant.

Mayflower

FOR LIQUEFIED PETROLEUM GAS.
Claims use since about 1938.

Reg. No. 412,687. Registered Mar. 20, 1945. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

PHYLLADRINE

FOR A PRODUCT DESIGNATED AS "A PREPARATION FOR THE PALLIATIVE TREATMENT OF ASTHMA."
Claims use since Sept. 8, 1944.

Reg. No. 414,539. Registered June 12, 1945. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

AMINOSOL

FOR A NUTRIENT CONTAINING PROTEIN HYDROLYSATE INTENDED FOR USE ONLY BY OR ON THE PRESCRIPTION OF A PHYSICIAN.
Claims use since Dec. 12, 1944.

Reg. No. 419,537. Registered Feb. 19, 1946. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

CECON

FOR VITAMIN PREPARATION CONTAINING VITAMIN C.
Claims use since Aug. 21, 1945.

Reg. No. 420,671. Registered May 7, 1946. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

AMETHONE

FOR ANTISPASMODIC PREPARATION.
Claims use since Aug. 22, 1945.

Reg. No. 424,224. Registered Sept. 24, 1946. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

Dicaldimin

FOR NITRITIVE PREPARATION CONTAINING VITAMINS AND MINERALS.
Claims use since Jan. 25, 1946.

Reg. No. 424,234. Registered Sept. 24, 1946. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

AMINONAT

FOR PROTEIN HYDROLYSATE PREPARATION FOR USE AS A DIETARY SUPPLEMENT.
Claims use since June 11, 1945.

Reg. No. 424,235. Registered Sept. 24, 1946. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

AMINOVITE

FOR PROTEIN HYDROLYSATE PREPARATIONS CONTAINING MINERALS AND VITAMINS FOR USE AS A DIETARY SUPPLEMENT.
Claims use since Oct. 22, 1945.

Reg. No. 426,328. Registered Dec. 24, 1946. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

RIBOTINIC

FOR VITAMIN PREPARATION CONTAINING RIBOFLAVIN AND NICOTINAMIDE AS ITS PRINCIPAL ACTIVE INGREDIENTS, MARKETED IN STERILE AMPOULES FOR HYPODERMIC INJECTION BY OR UNDER THE DIRECTION OF A PHYSICIAN.
Claims use since July 14, 1942.

Reg. No. 426,351. Registered Dec. 24, 1946. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

NEMBUDEINE

FOR SEDATIVE, ANALGESIC, AND ANTIPYRETIC COMPOUND.
Claims use since Dec. 27, 1945.

Reg. No. 428,411. Registered Mar. 25, 1947. POOLE M. POOLE, doing business as Poole Manufacturing Engineers, Dallas, Tex. Republished by registrant.

FOR REMOTE-READING MICROMETERS; AN APPARATUS, CONSISTING OF A TANK GAUGER'S REEL AND TAPE WITH A METAL PLUMB BOB, AND A MILLIAMMETER IN THE CIRCUIT THROUGH THE PLUMB BOB AND TANK SO THAT THE MILLIAMMETER DEFLECTS WHEN THE PLUMB BOB PASSES THROUGH THE LINE OF DEMARCATION BETWEEN THE OIL AND THE WATER IN THE TANK, AND USED FOR INDICATING SAID LINE; AND SPECIFIC GRAVITY METERS.
Claims use since Aug. 22, 1938.

Reg. No. 428,545. Registered Mar. 25, 1947. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

DENSITOL

FOR BROMINATED VEGETABLE OIL FOR A STABILIZING AGENT FOR LIQUID FOODS OR BEVERAGES.
Claims use since May 21, 1946.

Reg. No. 430,356. Registered June 10, 1947. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

CALCALITH

FOR ANTACID PREPARATION.
Claims use since Dec. 4, 1903.

Reg. No. 430,357. Registered June 10, 1947. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

SODOXYLIN

FOR ANTACID PREPARATION.
Claims use since Oct. 1, 1903.

Reg. No. 430,962. Registered July 1, 1947. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

POWDALATOR

FOR CONTAINER CHARGED WITH A MEDICAMENT IN DRY COMMINUTED FORM FOR APPLICATION TO LOCALIZED AREAS FOR THE PURPOSE OF ELIMINATING AND/OR PREVENTING THE DEVELOPMENT OF PATHOLOGICAL BACTERIA AS, FOR EXAMPLE, OCCURS IN TOOTH EXTRACTION.
Claims use since Mar. 13, 1946.

Reg. No. 430,963. Registered July 1, 1947. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

Sur-bex

FOR MULTIPLE VITAMIN PREPARATION.
Claims use since Apr. 16, 1946.

CLASS 7

CORDAGE

Reg. No. 259,738. Registered Aug. 6, 1929. UNION WIRE ROPE CORPORATION, Tulsa, Okla., a corporation of Delaware. Republished by registrant.

The representation of the goods and the representation of the spool holding the wire or cable are disclaimed.
FOR WIRE ROPE AND WIRE-ROPE CABLES AND FOR HIGH CARBON WIRE MANUFACTURED FOR WIRE-ROPE PURPOSES.
Claims use since Nov. 1, 1927.

Reg. No. 280,084. Registered Sept. 14, 1937. YAZOO MILLS, INCORPORATED, Hanover, Pa., a corporation of Pennsylvania. Republished by registrant.

YAZOO MILLS
INC.

HANOVER, PA.

FOR TWINES AND CORDAGE.
Claims use since Nov. 17, 1936.

Reg. No. 428,735. Registered Apr. 1, 1947. CHICAGO PRINTED STRING COMPANY, Chicago, Ill., a firm. Republished by registrant.

Cotton Queen

The word "Cotton" is disclaimed.
FOR WRAPPING STRING OR TAPE USED AS TYING MATERIAL.
Claims use since Apr. 2, 1946.

Reg. No. 430,098. Registered June 10, 1947. CHICAGO PRINTED STRING COMPANY, Chicago, Ill., a firm. Republished by registrant.

TIE ◇ TIE
Ribbonette

FOR TAPE AND RIBBON USED FOR TYING GIFT AND OTHER PACKAGES AND FOR OTHER TYING USES.
Claims use since July 1931.

Reg. No. 430,400. Registered June 10, 1947. UNION WIRE ROPE CORPORATION, Kansas City, Mo., a corporation of Delaware. Republished by registrant.

Tuffy

FOR WIRE ROPE AND WIRE ROPE CABLES FOR USE IN THE LUMBER INDUSTRY.
Claims use since Jan. 10, 1946.

Reg. No. 430,401. Registered June 10, 1947. UNION WIRE ROPE CORPORATION, Kansas City, Mo., a corporation of Delaware. Republished by registrant.

Tuffy

FOR WIRE ROPE AND WIRE ROPE CABLES FOR USE IN THE MINING INDUSTRY.
Claims use since Jan. 15, 1945.

Reg. No. 430,415. Registered June 10, 1947. CHICAGO PRINTED STRING COMPANY, Chicago, Ill., a firm. Republished by registrant.

Chiprene

FOR WRAPPING STRING OR TAPE USED AS TYING MATERIAL.
Claims use since Sept. 2, 1946.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 318,610. Registered Oct. 30, 1934. SMOKADOR MANUFACTURING CO., INC., Bloomfield, N. J., a corporation of Delaware. Republished by registrant.

SERVADOR

FOR ASH STANDS.
Claims use since Mar. 25, 1934.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 231,365. Registered Aug. 16, 1927. IVER JOHNSON'S ARMS & CYCLE WORKS, Fitchburg, Mass., a corporation of Massachusetts. Republished by registrant.

IVER JOHNSON

FOR REVOLVERS AND SHOTGUNS.
Claims use since Sept. 1, 1894.

Reg. No. 333,293. Registered Mar. 17, 1936. IVER JOHNSON'S ARMS & CYCLE WORKS, Fitchburg, Mass., a corporation of Massachusetts. Republished by registrant.

No claim is made to the representation of a revolver.
FOR RIFLES, SHOTGUNS, PISTOLS, AND REVOLVERS.
Claims use since June 1, 1904.

CLASS 10

FERTILIZERS

Reg. No. 288,895. Registered Oct. 27, 1931. N. S. KOCH & SON COMPANY, Kenosha, Wis., a corporation of Wisconsin. Republished by registrant.

The words "Plant Food" are disclaimed.
FOR LAWN AND PLANT FOOD.
Claims use since Apr. 15, 1931.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 57,904. Registered Dec. 4, 1906. THE AMERICAN MULTIGRAPH COMPANY, Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

MULTIGRAPH

FOR INK AND INKED RIBBONS FOR TYPEWRITERS, PRINTING MACHINES, ETC.
Claims use since about 1902.

Reg. No. 350,362. Registered Sept. 28, 1937. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Euclid Post Office, Cleveland and Euclid Village, Ohio, a corporation of Delaware. Republished by registrant, present location Cleveland, Ohio.

The lining on the drawing is not intended to indicate any particular color.
FOR INKS AND INKED RIBBONS.
Claims use since about July 1934.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 28,022. Registered Mar. 24, 1896. VREELAND TOMPKINS, Jersey City, N. J. Republished by Smooth-On Manufacturing Company, Jersey City, N. J., a corporation of New Jersey.

FOR TWO CHEMICAL COMPOUNDS, ONE OF WHICH IS USED TO REPAIR DEFECTS IN CASTINGS, AND THE OTHER ONE OF WHICH IS INCORPORATED IN CORE-SAND TO MAKE CORES, WHICH CAN BE MORE EASILY HANDLED, MORE POROUS IN THE CENTER, SO THAT GASES GENERATED THEREIN MAY MORE READILY ESCAPE, AND CORES WHICH ARE OTHERWISE BETTER THAN THOSE FORMED IN THE ORDINARY WAY.
Claims use since September 1895.

Reg. No. 34,161. Registered Feb. 6, 1900. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR AN IRON COMPOUND IN THE FORM OF A DRY POWDER USED TO REPAIR DEFECTS AND BREAKS IN AND MAKE PATCHES ON IRON AND OTHER METALLIC SUBSTANCES, AND TO MAKE METALLIC JOINTS AND TO COVER METALLIC SURFACES AND TO REMOVE OR PREVENT SCALES IN BOILERS.
Claims use since Nov. 1, 1895.

Reg. No. 138,726. Registered Jan. 4, 1921. UNION LUMBER COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

NOYO!

FOR LUMBER AND FOREST PRODUCTS—NAMELY, FINISHED TIES AND SAWN LUMBER.
Claims use since June 24, 1918.

Reg. No. 146,877. Registered Sept. 20, 1921. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR SUBSTANCES CONSISTING CHIEFLY OF COMMINUTED IRON IN POWDER AND PLASTIC FORM USED AS A CEMENT IN PIPE-JOINTS AND FOR STOPPING LEAKS IN STEAM, HYDRAULIC, AND OTHER FLUID CONDUCTORS AND CONTAINERS.
Claims use since 1894.

Reg. No. 299,149. Registered Nov. 22, 1932. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

No. 1

FOR AN IRON COMPOUND IN THE FORM OF A DRY POWDER USED TO REPAIR DEFECTS AND BREAKS IN AND MAKE PATCHES ON IRON AND OTHER METALLIC SUBSTANCES, TO MAKE METALLIC JOINTS, AND TO COVER METALLIC SURFACES.
Claims use since about 1901.

Reg. No. 299,886. Registered Dec. 27, 1932. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

Do it with SMOOTH-ON

FOR AN IRON COMPOUND IN THE FORM OF A DRY POWDER USED TO REPAIR DEFECTS AND BREAKS IN AND MAKE PATCHES ON IRON AND OTHER METALLIC SUBSTANCES, TO MAKE METALLIC JOINTS, AND TO COVER METALLIC SURFACES.
Claims use since August 1930.

Reg. No. 342,869. Registered Feb. 2, 1937. THE PARR PAINT & COLOR COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

ALUMILASTIC

The words "The Elastic Metallic Compound" are disclaimed.
FOR VISCID COMPOUNDS FOR USE IN GLAZING, CALKING, AND POINTING.
Claims use since Feb. 3, 1931.

Reg. No. 364,771. Registered Feb. 14, 1939. THE PARR PAINT & COLOR COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

ZINKROLASTIC

The words "The Resilient Zinc Chromate Base Compound" are disclaimed.
FOR VISCID COMPOUNDS FOR USE IN GLAZING, CALKING, AND POINTING.
Claims use since Aug. 25, 1938.

Reg. No. 391,286. Registered Oct. 28, 1941. THE M. J. GROVE LIME COMPANY OF FREDERICK COUNTY, Lime Kiln, Md., a corporation of Maryland. Republished by registrant.

FREE STATE

FOR MASONRY MORTAR.
Claims use since on or about May 22, 1941.

Reg. No. 413,838. Registered May 15, 1945. DANBURY RUBBER COMPANY, INC., Danbury, Conn., a corporation of Connecticut. Republished by registrant.

D

FOR TILE AND FLOORING TILE, MADE OF RUBBER (NATURAL OR SYNTHETIC), PLASTIC MATERIAL, FIBROUS MATERIAL, OR COMPOSITIONS OF THE SAME.
Claims use since Oct. 1, 1944.

Reg. No. 418,512. Registered Jan. 1, 1946. RAYBESTOS-MANHATTAN, INC., Passaic, N. J., a corporation of New Jersey. Republished by registrant.

PYROTEX

FOR FELTED ASBESTOS WEB MATERIAL IN TAPE, SHEET OR ROLL FORM FOR THERMAL INSULATION AND OTHER PROTECTIVE PURPOSES.
Claims use since Apr. 9, 1943.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 201,037. Registered July 14, 1925. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR PIPE CLAMPS.
Claims use since Nov. 15, 1924.

Reg. No. 231,624. Registered Aug. 23, 1927. PERFECTION GEAR COMPANY, Chicago, Ill. Republished by Perfection Gear Company, Harvey, Ill., a corporation of Illinois.

PERFECTION

The words "The Mark of Perfection," "Certified Parts," and "Chicago" are disclaimed.
FOR CHAINS FOR USE ON MOTOR FRONT ENDS, MOTOR DRIVES, AND POWER TRANSMISSIONS OF ALL DESCRIPTIONS.
Claims use since Nov. 1, 1925.

Reg. No. 313,827. Registered June 12, 1934. GENERAL WATER HEATER CORPORATION, Los Apgeles, Calif., a corporation of Delaware. Republished by registrant.

RADIO

FOR VALVES FOR WATER HEATERS, FURNACES AND GAS APPLIANCES.
Claims use since Jan. 25, 1934.

Reg. No. 347,778. Registered July 6, 1937. THE IMPERIAL BRASS MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

IMPERIAL

FOR VALVES—NAMELY, MANUALLY OPERATED VALVES OF THE PLUG AND DISC TYPE, AUTOMATIC VALVES FOR CONTROL IN ALL TYPES OF FLUID LINES, SHUT-OFF VALVES AND NEEDLE VALVES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Jan. 24, 1905.

Reg. No. 350,746. Registered Oct. 5, 1937. THE MOORE ENAMELING & MANUFACTURING COMPANY, West Lafayette, Ohio, a corporation of Ohio. Republished by registrant.

FOR ENAMELED BASE METAL HOLLOW WARE, FLAT WARE, SEMI-FLAT WARE, AND SHALLOW WARE—NAMELY, DOUBLE BOILERS, COMBINATION COOKERS, KETTLES, TEAKETTLES, SAUCE PANS, PERCOLATORS, POTS; COVERS FOR BOILERS, COOKERS, KETTLES, PANS, AND POTS; PIE PLATES, BAKE PANS, DUTCH OVENS, COMBINATION ROASTERS AND COOKERS, REFRIGERATOR PANS, PUDDING PANS, DISH PANS, AND SINK STRAINERS, ALL FOR CULINARY, KITCHEN, AND HOUSEHOLD PURPOSES.
Claims use since Jan. 11, 1937.

Reg. No. 355,960. Registered Apr. 5, 1938. GUSTIN-BACON MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

ROLAGRIP

FOR PIPE COUPLINGS.
Claims use since December 1934.

Reg. No. 380,451. Registered Aug. 20, 1940. GULF COAST MACHINE & SUPPLY COMPANY, Beaumont, Tex., a corporation of Texas. Republished by registrant.

GULFCO

FOR OIL FIELD EQUIPMENT—NAMELY, CHOKE VALVES, NEEDLE VALVE CHOKES, NIPPLES, MALE CROSSES, FEMALE CROSSES, FEMALE L'S, STEEL UNIONS, MALE AND FEMALE CROSSES, FEMALE T'S, BULL PLUGS, STRAPPED LINKS, CHRISTMAS TREES.
Claims use since February 1922.

Reg. No. 393,223. Registered Jan. 27, 1942. THE GRIP BROS. COOPERAGE CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

CLOZ-IT

FOR STAPLES ADAPTED TO BE DRIVEN BY SUITABLE MACHINES.
Claims use since Apr. 1, 1941.

Reg. No. 402,928. Registered Aug. 24, 1943. GUSTIN-BACON MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

SEGWELD

FOR STEEL PIPE FITTINGS—NAMELY, L'S, T'S, CROSSES, LATERALS, BRANCHES, NIPPLES, REDUCERS, AND BLANK ENDS.
Claims use since Jan. 2, 1943.

Reg. No. 418,706. Registered Jan. 8, 1946. THE DURIRON COMPANY, INC., Dayton, Ohio, a corporation of New York. Republished by registrant.

DURCO

FOR PLUMBING AND STEAMFITTING SUPPLIES—NAMELY, COCKS, JETS, METAL PIPES, PIPE FITTINGS, NOZZLES, FLUID CONTROL VALVES, TUBES FOR THE USE IN DISTILLING AND CONCENTRATING APPARATUS, EJECTORS, FLOOR DRAINS, FUME DUCTS, SINKS, SINK STRAINERS, AND TRAPS.
Claims use since January 1945.

Reg. No. 426,976. Registered Jan. 21, 1947. GUSTIN-BACON MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

FLEXIGRIP

FOR METALLIC TUBE FITTINGS.
Claims use since Feb. 25, 1946.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 44,478. Registered July 4, 1905. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR IRON COMPOUND IN THE FORM OF A DRY POWDER USED TO REPAIR DEFECTS AND BREAKS IN AND MAKE PATCHES ON IRON, AND OTHER METALLIC SUBSTANCES TO MAKE METALLIC JOINTS, TO COVER METALLIC SURFACES, AND TO REMOVE OR PREVENT SCALES IN BOILERS.
Claims use since Nov. 1, 1895.

Reg. No. 144,160. Registered June 28, 1921. AMERICAN MANGANESE BRONZE COMPANY, INC., Philadelphia, Pa., and New York, N. Y., a corporation of New York. Republished by registrant.

HY-TEN-SL
A Bronze as Strong as Nickel Steel

The words "A Bronze as Strong as Nickel Steel" are disclaimed.
FOR BULK-BRONZE AND CASTINGS MADE FROM BRONZE.
Claims use since April 1918.

Reg. No. 148,534. Registered Nov. 15, 1921. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR SUBSTANCES CHIEFLY COMPOSED OF COMMINUTED IRON IN POWDER AND PLASTIC FORM FOR CEMENTING, INTERSTICE-CLOSING, AND SURFACING AND SURFACE-COATING.
Claims use since 1894.

Reg. No. 356,118. Registered Apr. 12, 1938. ROSS-MEEHAN FOUNDRIES, Chattanooga, Tenn., a corporation of Tennessee. Republished by registrant.

ROSS-MEEHAN

FOR IRON AND STEEL CASTINGS.
Claims use since on or about Oct. 28, 1937.

Reg. No. 403,778. Registered Oct. 19, 1943. INLAND STEEL COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

ELTRON

FOR ELECTROLYTIC TIN PLATE.
Claims use since Mar. 25, 1943.

CLASS 15

OILS AND GREASES

Reg. No. 191,852. Registered Nov. 18, 1924. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa. Republished by The Pennsoil Company, Los Angeles, Calif., a corporation of California.

Zip

FOR LUBRICANTS COMPRISING OILS AND GREASES.
Claims use since Mar. 17, 1923.

Reg. No. 248,431. Registered Oct. 23, 1928. THE PENNSOIL COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

PENNZOIL

FOR MOTOR FUEL OILS AND LUBRICANT OILS AND GREASES.
Claims use since about Dec. 28, 1915.

Reg. No. 379,985. Registered Aug. 6, 1940. THE PENNSOIL COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

NUZIP

FOR SOLVENT OIL COMPOUND FOR USE GENERALLY IN FLUSHING, PURGING AND CLEANING INTERNAL COMBUSTION ENGINES AND FOR THE REMOVAL OF SLUDGE FROM SUCH ENGINES.
Claims use since June 1, 1939.

Reg. No. 391,394. Registered Nov. 4, 1941. MID-WEST OIL COMPANY, Kansas City, Kans., a firm. Republished by registrant.

PENNLAND

FOR LUBRICATING OILS.
Claims use since Feb. 15, 1928.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 85,191. Registered Jan. 30, 1912. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR LIQUID IRON COMPOUND.
Claims use since 1894.

Reg. No. 138,264. Registered Dec. 21, 1920. INDIANA INDESTRUCTIBLE PAINT CO., Chicago, Ill. Republished by Commonwealth Varnish Co., Chicago, Ill., a corporation of Illinois.

FULLERTON QUALITY PAINTS

The words "Quality Paints" are disclaimed.
FOR HOUSE-PAINT, MIXED PAINT, FLAT WALL-PAINT, INTERIOR PAINT, AND ENAMEL PAINT.
Claims use since Nov. 20, 1909.

Reg. No. 148,865. Registered Nov. 29, 1921. INDIANA INDESTRUCTIBLE PAINT CO., Chicago, Ill. Republished by Commonwealth Varnish Co., Chicago, Ill., a corporation of Illinois.

SILK-TONE
"THE BEAUTIFUL" A FLAT WALL FINISH

The words "The Beautiful," "A Flat Wall Finish" are disclaimed.
FOR A FLAT PAINT FOR FINISHING INTERIOR WALLS, CEILINGS, AND WOODWORK.
Claims use since Nov. 20, 1909.

Reg. No. 153,001. Registered Mar. 7, 1922. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR READY MIXED PAINTS.
Claims use since 1894.

Reg. No. 223,858. Registered Feb. 15, 1927. DETROIT WHITE LEAD WORKS, Detroit, Mich. Republished by Rogers Paint Products, Inc., Detroit, Mich., a corporation of Michigan.

The words "Brushing Lacquer" are disclaimed.
FOR DRY, PASTE AND READY MIXED PAINTS, PAINT ENAMELS AND LACQUERS.
Claims use since Jan. 4, 1926.

Reg. No. 224,821. Registered Mar. 8, 1927. W. W. LAWRENCE & COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

LAWRENCE
UNIVERSAL
ENAMEL

The words "Lawrence" and "Enamel" are disclaimed.
FOR PAINT ENAMELS.
Claims use since Jan. 2, 1926.

Reg. No. 255,849. Registered Apr. 30, 1929. THE MORGAN COMPANY, Peoria, Ill. Republished by Hockaday, Inc., Chicago, Ill., a corporation of Illinois.

"3"

FOR VARNISHES, PAINT ENAMELS AND VARNISH STAINS.
Claims use since about Apr. 1, 1928.

Reg. No. 286,562. Registered Sept. 1, 1931. THE MORGAN COMPANY, Chicago, Ill. Republished by Hockaday, Inc., Chicago, Ill., a corporation of Illinois.

FLEETWAY

FOR INDUSTRIAL PAINT ENAMELS.
Claims use since about May 15, 1930.

Reg. No. 286,563. Registered Sept. 1, 1931. THE MORGAN COMPANY, Chicago, Ill. Republished by Hockaday, Inc., Chicago, Ill., a corporation of Illinois.

METALEX

FOR PROTECTIVE READY MIXED PAINT.
Claims use since about Nov. 15, 1929.

Reg. No. 288,199. Registered Oct. 20, 1931. THE MORGAN COMPANY, Peoria, Ill. Republished by Hockaday, Inc., Chicago, Ill., a corporation of Illinois.

FLEETWING

FOR READY MIXED PAINTS, PAINT ENAMELS, AND VARNISHES.
Claims use since on or about Sept. 15, 1928.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 186,638. Registered July 22, 1924. E. REGENSBURG & SONS, New York, N. Y., a corporation of New York. Republished by registrant.

ADMIRATION

FOR CIGARS.
Claims use since Apr. 1, 1885.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 169,966. Registered July 10, 1923. W. WESLEY HICKS, San Francisco, Calif. Republished by Wesix Electric Heater Co., San Francisco, Calif., a corporation of California.

WESIX

FOR ELECTRIC WATER HEATERS, INCLUDING CIRCULATION, IMMERSION, AND SPECIAL TYPES; ELECTRIC AIR HEATERS, INCLUDING RADIANT, RADIANT CONVECTION, FLOOR AND WALL TYPE HEATERS; ELECTRIC HEATING UNITS FOR GRILLS, ELECTRIC HOT PLATES, THERMOSTATS, ELECTRIC STEAM BOILERS.
Claims use since Feb. 3, 1919.

Reg. No. 215,250. Registered July 13, 1926. THE BROWN-BROCKMEYER COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

B-LINE

FOR ELECTRICAL MOTORS.
Claims use since Aug. 15, 1925.

Reg. No. 242,884. Registered June 5, 1928. FRENCH BATTERY COMPANY, Madison, Wis. Republished by Ray-O-Vac Company, Madison, Wis., a corporation of Wisconsin.

RAY-O-VAC

FOR DRY CELLS FOR ELECTRIC BATTERIES, PORTABLE ELECTRIC FLASH LIGHTS OR ELECTRIC TORCHES, AND ELECTRIC FLASHLIGHT CASES.
Claims use since Aug. 1, 1925.

Reg. No. 301,512. Registered Mar. 7, 1933. CLAUDE NEON ELECTRICAL PRODUCTS CORPORATION, LTD., Los Angeles, Calif. Republished by Electrical Products Corporation, Los Angeles, Calif., a corporation of California.

LUMENARC

FOR GASEOUS DISCHARGE TUBULAR LAMPS.
Claims use since Oct. 18, 1932.

Reg. No. 339,945. Registered Oct. 27, 1936. THE QUADREX CORPORATION, New York, N. Y. Republished by The Regina Corporation, Rahway, N. J., a corporation of New Jersey.

"ELECTRIKBROOM"

The word "Electric" is disclaimed.
FOR ELECTRICAL VACUUM CLEANERS.
Claims use since on or about Aug. 9, 1933.

Reg. No. 365,386. Registered Mar. 7, 1939. CONDUIT FITTINGS CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR CONDUIT FITTINGS, COUPLINGS, BUSHINGS, CONNECTORS, STRAPS, CAPPED ELBOWS, SERVICE HEADS, LOCK NUTS, AND ENTRANCE CAPS, FOR ELECTRICAL WORK.
Claims use since Aug. 2, 1938.

Reg. No. 409,155. Registered Sept. 19, 1944. WALTER G. LEGGE COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

CONDUCOTE

FOR PLASTIC MATERIAL TO BE APPLIED TO FLOORS FOR RENDERING THEM SPARK PROOF AND CONDUCTIVE OF STATIC ELECTRICITY.
Claims use since on or about Mar. 1, 1942.

Reg. No. 410,484. Registered Nov. 28, 1944. TITEFLEX, INC., Newark, N. J. Republished by Titeflex, Inc., Wilmington, Del., and Newark, N. J., a corporation of Delaware.

Titeflex

FOR IGNITION SHIELDING HARNESSES AND PARTS, USED FOR INTERNAL COMBUSTION ENGINES.
Claims use since July 30, 1936.

Reg. No. 430,387. Registered June 10, 1947. W. WESLEY HICKS, San Francisco, Calif. Republished by registrant.

IONATOMIC

FOR ELECTRIC SPACE HEATERS.
Claims use since on or about July 20, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 383,451. Registered Dec. 10, 1940. HALEX LIMITED, London, England, a company organized under the laws of Great Britain and Ireland. Republished by registrant.

HALEX

FOR TABLE TENNIS BALLS.
Claims use since Feb. 1, 1902.

Reg. No. 403,080. Registered Aug. 31, 1943. KASCO MILLS, INC., Toledo, Ohio, a corporation of Ohio. Republished by registrant.

KASCO

FOR CARD GAME.
Claims use since Jan. 1, 1943.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 54,697. Registered June 26, 1906. ADDRESSOGRAPH COMPANY, Chicago, Ill. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Addressograph

FOR MACHINES FOR PRINTING ADDRESSES OR OTHER MATTER.
Claims use since Nov. 1, 1893.

Reg. No. 146,163. Registered Sept. 6, 1921. THE AMERICAN MULTIGRAPH SALES COMPANY, Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

MULTIGRAPH

FOR PRINTING MACHINES AND PARTS THEREOF.
Claims use since about September 1904.

Reg. No. 147,447. Registered Oct. 18, 1921. ADDRESSOGRAPH COMPANY, Chicago, Ill. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Addressograph

The words "Prints From Type" are disclaimed.
FOR MACHINES FOR PRINTING ADDRESSES AND OTHER MATTER.
Claims use since on or about July 1, 1909.

FOR CANNED FRUITS AND VEGETABLES, CANNED FRUIT JUICE FOR FOOD PURPOSES, CANNED VEGETABLE JUICE FOR FOOD PURPOSES, TOMATO PASTE, TOMATO SAUCE, CANNED TUNA, CANNED BONITA, CANNED HOMINY, CANNED PORK AND BEANS.
Claims use since July 15, 1932.

Reg. No. 398,391. Registered Oct. 27, 1942. A. ARENA AND CO., LTD., Los Angeles, Calif., a corporation of California. Republished by registrant.

FOR FRESH VEGETABLES AND FRESH GRAPES.
Claims use since Apr. 18, 1942.

Reg. No. 401,750. Registered June 8, 1943. A. ARENA AND CO., LTD., Los Angeles, Calif., a corporation of California. Republished by registrant.

FOR FRESH VEGETABLES.
Claims use since April 1940.

Reg. No. 401,912. Registered June 15, 1943. SUN-MAID RAISIN GROWERS OF CALIFORNIA, Fresno, Calif., a cooperative association of California. Republished by registrant.

The word "Amber" is disclaimed.
FOR RAISINS.
Claims use since May 27, 1931.

Reg. No. 402,502. Registered July 27, 1943. TURLOCK CO-OPERATIVE GROWERS, Modesto and San Francisco, Calif., a corporation of California. Republished by registrant.

MOON VALLEY

FOR CANNED FRUITS.
Claims use since Sept. 26, 1917.

Reg. No. 407,825. Registered June 27, 1944. J. L. THOMPSON, Somerton and Yuma, Ariz. Republished by registrant, present location Somerton, Ariz.

HUMDINGER

FOR FRESH VEGETABLES—NAMELY, LETTUCE.
Claims use since Feb. 2, 1944.

Reg. No. 415,229. Registered July 31, 1945. DERAN CONFECTIONERY CO., INC., East Cambridge, Mass., a corporation of Massachusetts. Republished by registrant.

P-X LUNCH

The word "Lunch" is disclaimed.
FOR CHOCOLATE COVERED PEANUT BUTTER CRACKER SANDWICH.
Claims use since Jan. 2, 1945.

Reg. No. 417,280. Registered Oct. 23, 1945. THE MIDLAND GROCERY COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

FOR CANNED BARTLETT PEARS, CANNED PINEAPPLE, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Apr. 25, 1911.

Reg. No. 421,356. Registered May 28, 1946. NAT FRINN, Walnut Grove, Calif. Republished by A. Levy and J. Zentner Company, San Francisco, Calif., a corporation of California.

ATOMIC

FOR FRESH VEGETABLES—NAMELY, TOMATOES.
Claims use since Sept. 17, 1945.

Reg. No. 425,341. Registered Nov. 12, 1946. KASCO MILLS, INC., Toledo, Ohio, a corporation of Ohio. Republished by registrant.

KASCO GRO-CALF

FOR CALF FEED.
Claims use since Dec. 12, 1945.

Reg. No. 425,346. Registered Nov. 12, 1946. CARL A. ROETTELE, Elsa, Tex. Republished by registrant.

RO-MAY

FOR CANNED TOMATOES AND CANNED TOMATO JUICE.
Claims use since Feb. 3, 1945.

Reg. No. 425,347. Registered Nov. 12, 1946. CARL A. ROETTELE, Elsa, Tex. Republished by registrant.

RO-TEL

FOR CANNED TOMATOES, CANNED TOMATO PUREE AND CANNED GRAPEFRUIT JUICE.
Claims use since June 5, 1943.

CLASS 47

WINES

Reg. No. 309,141. Registered Jan. 2, 1934. THE GUSTAVE NIEBAUM COMPANY, San Francisco, Calif. Republished by Inglenook Vineyard Co., Rutherford, Calif., a firm.

FOR WINES.
Claims use since on or about Jan. 1, 1885.

Reg. No. 322,034. Registered Feb. 26, 1935. SIMON LEVI CO., LTD., Los Angeles, Calif., a corporation of California. Republished by registrant.

Bolero

FOR WINES.
Claims use since July 25, 1934.

Reg. No. 329,997. Registered Nov. 19, 1935. SUN-MAID RAISIN GROWERS OF CALIFORNIA, Fresno, Calif., a cooperative association of California. Republished by registrant.

SUN-MAID

FOR WINE.
Claims use since Apr. 10, 1934.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 26,749. Registered July 2, 1895. VALENTIN BLATZ BREWING COMPANY, Milwaukee, Wis. Republished by Blatz Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

FOR BOTTLED LAGER BEER.
Claims use since on or about Feb. 9, 1895.

Reg. No. 49,804. Registered Feb. 20, 1906. VALENTIN BLATZ BREWING CO., Milwaukee, Wis. Republished by Blatz Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

FOR BOTTLED LAGER BEER.
Claims use since on or about Feb. 9, 1895.

Reg. No. 113,900. Registered Nov. 7, 1916. NORTH AMERICAN BREWING COMPANY, New York and Brooklyn, N. Y. Republished by Blatz Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

FOR BEER.
Claims use since June 5, 1915.

Reg. No. 355,866. Registered Apr. 5, 1938. G. KRUEGER BREWING COMPANY, Newark, N. J., a corporation of Delaware. Republished by registrant.

KRUEGER

Finest

The word "Finest" is disclaimed.
FOR BEER, ALE, PORTER AND STOUT.
Claims use since 1858.

Reg. No. 411,844. Registered Feb. 6, 1945. BLATZ BREWING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR BEER.
Claims use since Nov. 21, 1941.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 116,374. Registered Apr. 24, 1917. STRAUS BROTHERS, Chicago, Ill. Republished by Simon Levi Co., Ltd., Los Angeles, Calif., a corporation of California.

Old Age

FOR WHISKEY.
Claims use since 1862.

Reg. No. 328,800. Registered Oct. 8, 1935. SOCIETE A RESPONSABILITE LIMITEE COINTREAU, Angers, France. Republished by Cointreau Corporation, Pennington, N. J., a corporation of New Jersey.

The representation of the bottle and all notations with the exception of the name "Cointreau" are disclaimed.
FOR CORDIALS AND LIQUEURS.
Claims use since Aug. 5, 1929.

Reg. No. 329,662. Registered Nov. 5, 1935. SOCIETE A RESPONSABILITE LIMITEE COINTREAU, Angers, France. Republished by Cointreau Corporation, Pennington, N. J., a corporation of New Jersey.

COINTREAU

FOR CORDIALS AND LIQUEURS.
Claims use since 1885.

Reg. No. 329,989. Registered Nov. 19, 1935. SUN-MAID RAISIN GROWERS OF CALIFORNIA, Fresno, Calif., a cooperative association of California. Republished by registrant.

SUN-MAID

FOR BRANDY.
Claims use since Mar. 2, 1935.

Reg. No. 334,360. Registered Apr. 28, 1936. SOCIETE A RESPONSABILITE LIMITEE COINTREAU, Angers, France. Republished by Cointreau Corporation, Pennington, N. J., a corporation of New Jersey.

COINTREAU

FOR LIQUEURS.
Claims use since Dec. 6, 1909.

Reg. No. 387,649. Registered May 23, 1939. ABRAM SMITH BOWMAN, doing business as A. Smith Bowman Distillery, Sunset Hills, Va. Republished by A. Smith Bowman Distillery, Sunset Hills, Va., a partnership.

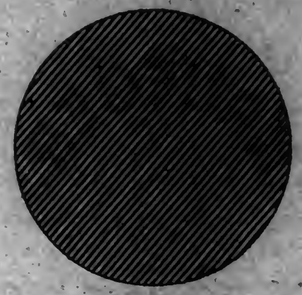
Fx

FOR WHISKEY.
Claims use since Jan. 10, 1939.

Reg. No. 407,679. Registered June 20, 1944. SIMON LEVI CO., LTD., Los Angeles, Calif., a corporation of California. Republished by registrant.

FOR TEQUILA.
Claims use since Sept. 14, 1943.

CLASS 50



MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 153,012. Registered Mar. 7, 1922. A. STEIN & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HICKORY

FOR RUBBER SHEETING.
Claims use since January 1913.

Reg. No. 330,343. Registered Nov. 26, 1935. FRUIT AND PRODUCE PACKING, INCORPORATED, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

The drawing is lined for the color green, but no claim is made to color. The representation of the cap is disclaimed.
FOR PAPER BOARD CAPS FOR FRUIT AND VEGETABLE CONTAINERS.
Claims use since June 1, 1932.

Reg. No. 431,100. Registered July 8, 1947. RUBICON, New York, N. Y., assignor to Rubicon Inc., New York, N. Y. Republished by Rubicon, Inc., New York, N. Y., a corporation of New York.

CHARM-LITE

The word "Lite" is disclaimed.
FOR LAMPS CONTAINING LIQUID WHICH WHEN BURNED CREATES A DEODORIZING EFFECT.
Claims use since Jan. 1, 1946.

REISSUES

JULY 13, 1948

23,016

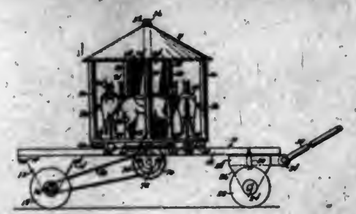
AZO DYE COMPOSITIONS STABILIZED WITH UNSATURATED CARBOXYLIC ACIDS OR SALTS

Swanie S. Rennander, Holly Oak, and Chiles E. Sparks and Carl W. Maynard, Jr., Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original No. 2,319,265, dated May 18, 1943, Serial No. 358,296, September 25, 1940. Application for reissue December 4, 1947, Serial No. 789,752

8 Claims. (Cl. 8—44)

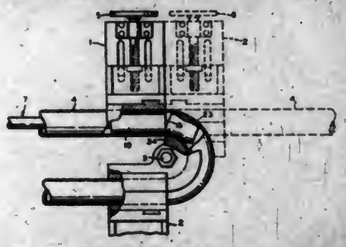
1. An acidic printing paste comprising a diazo salt of a primary arylamine of the group consisting of meta chloro aniline, 4- and 5-chloro-2-amino-toluene, 4-chloro-2-nitro-aniline, 3-nitro-4-amino-toluene, 5-nitro-2-amino-toluene, 4-nitro- and 4-chloro-2-amino-anisole, 3-nitro-4-amino-anisole, 5-nitro-2-amino-anisole, 2,5-dichloroaniline, dianisidine, 1-amino-naphthalene and 1-amino-anthraquinone and a diazo salt printing paste stabilizer of the group consisting of alpha-beta unsaturated aliphatic mono- and di-carboxylic acids having 4 to 6 carbons and the water soluble sodium and potassium salts of said acids.



PATENTS

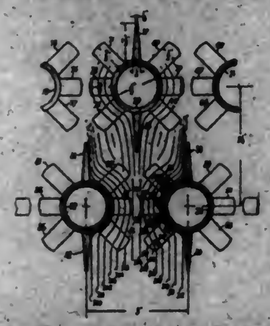
GRANTED JULY 13, 1948

2,444,905
PREVENTION AND DESTRUCTION OF WEEDS
Wilfred Archibald Sexton, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 14, 1945, Serial No. 610,864. In Great Britain June 28, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 28, 1963
12 Claims. (Cl. 167—45)



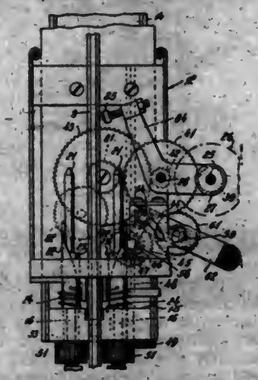
5. A composition suitable for destroying weeds comprising a carrier material and a compound selected from the group consisting of 2,4,5-trichlorophenylacetic acid and its water-soluble salts in amount sufficient to exert an herbicidal action.

2,444,906
TOY MERRY-GO-ROUND
Bernard J. Assendrup, Seattle, Wash.
Application October 30, 1943, Serial No. 508,284
1 Claim. (Cl. 272—31)



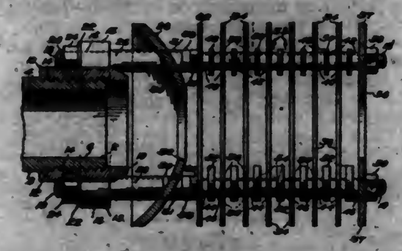
A toy of the type described, comprising a platform mounted on wheels, an upright post rigidly supported on said platform, a merry-go-round rotatably supported on the post above the platform and spaced therefrom, rocking figures carried by the merry-go-round, means extending through the base of the merry-go-round and engaging cams on the platform for rocking the figures, and means carried by the base of the merry-go-round between the same and the platform for rotating the merry-go-round and operated by the supporting wheels of the platform.

2,444,907
TUBE-BENDING MANDREL
Richard F. Attridge, Revere, Mass.
Application May 3, 1945, Serial No. 591,769
3 Claims. (Cl. 153—63)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



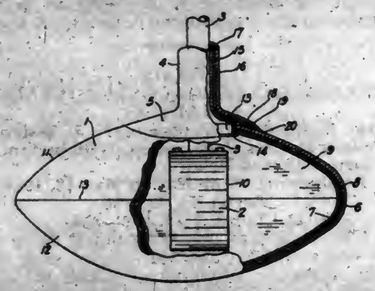
1. In a mandrel for bending a tube, a bearing member attached to the end of the mandrel by a universal connection and adapted to be located within said tube where it is to be bent, said bearing member having a plurality of convex bearing portions formed thereon at longitudinally spaced intervals and a concave ironing portion disposed therebetween, the surfaces of said bearing portions being curved longitudinally of said bearing member the same as the curvature of the outer side of the bend to be formed in the tube and said concave ironing surface being curved longitudinally with the same radius of curvature as that of the inner side of the bend to be formed in the tube, the surface of said ironing portion merging with the surfaces of said bearing portions, said bearing member being of annular cross section so that it will fit closely within the tube to be bent.

2,444,908
FLUID HEAT EXCHANGE INSTALLATION
Ervin G. Bailey, Easton, Pa., and Ralph M. Hardgrove, Westfield, and Thomas B. Stillman, South Orange, N. J., assignors to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey
Continuation of application Serial No. 471,856, January 9, 1943. This application June 6, 1946, Serial No. 674,786
6 Claims. (Cl. 257—262)



1. A convector including a bank of spaced tubes extending transversely of a flow of an external heat exchange fluid, a primary set of closely adjacent and aligned fin-like extended surface elements secured to each tube in two longitudinal rows at diametrically opposite sides of the tubes with said elements extending generally in the direction of gas flow and having their major transverse axes disposed longitudinally of the tubes, a second set of extended surface elements in the form of studs of thin or flattened cross section secured to opposite sides of the tubes between the opposite rows of elements of the first set, the elements of said second set having their major transverse axes disposed transversely to the wide faces of the elements of the primary set, a third set of oblique extended surface elements constructed and arranged similarly to the elements of the second set, the elements of the third bet being longer radially of the tube than the elements of the second set and secured to the downflow quadrants of the tubes between the first and second sets of elements, and means for effecting a flow of fluid through the tubes.

2,444,909
CLOTH-CUTTING MACHINE
William Bangser, New York, N. Y., assignor to H. Maimin Company, Incorporated, a corporation of New York
Application July 4, 1945, Serial No. 603,153
2 Claims. (Cl. 51—249)

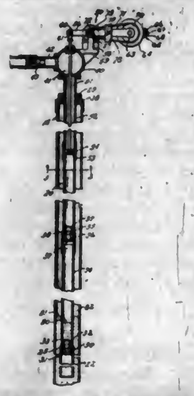


1. In a cloth-cutting machine of the reciprocating knife type, the combination of a slide movable relative to the knife, a pair of spindles carried by the slide and terminating at their upper ends in pilot rods, swinging arms fixed to the spindles, stones for sharpening the knife mounted on the arms, a helical cam carried by each pilot rod, fixed helical cams on the machine adapted to receive the pilot rods and with which the movable helical cams engage when the slide is at or near its upper position, the helical cams of each pair being complementary, semi-cylindrical at their bases, tapering toward their outer ends, and with guiding bulges on their rear faces whereby they may operatively engage through a wide arc and means for moving the slide vertically relative to the knife, whereby engagement of the fixed and movable cams swing the stones relative to the knife.

2,444,910
MUZZLE BRAKE FOR GUNS
George A. Barker, Rochester, N. Y.
Application March 30, 1945, Serial No. 585,759
7 Claims. (Cl. 89—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A muzzle brake comprising a housing adapted to be attached to the muzzle of a gun barrel, a supporting means on said housing, a plurality of baffle plates spaced a predetermined distance relative to each other on said supporting means, said baffle plates having aligned openings for the passage of a projectile from the gun muzzle, said baffle plates discharging annularly and radially outward propellent gases generated incident to the firing of the gun for projecting a projectile, removable metering members on said supporting means, each metering member being between adjacent baffle plates for controlling the rate and the angular direction of discharge of said gases between the baffle plates, removable spacer means on said supporting means for locating each metering member relatively to its adjacent baffle plates, removable fastening means on said supporting means for compacting thereon said baffle plates, metering members and spacer means, said metering members and spacer means being individually and selectively removable whereby said members and spacer means may be replaced by different sized plates and spacer means, respectively, without altering said predetermined distance between plates to obtain thereby a resultant thrust in a predetermined direction perpendicular to the axis of the gun barrel.

2,444,911
ACOUSTIC STRUCTURE
Hugo Benioff, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application December 4, 1942, Serial No. 468,172
2 Claims. (Cl. 181—0.5)



1. An acoustic housing for a receiving unit forming a substantially closed container adapted to permit the transmission of acoustic vibrations therethrough comprising an outer shell and an inner shell substantially coextensive therewith and spaced therefrom, and a viscous material filling the space between the shells, the combined thickness of the elements making up said housing being small compared to the wave length of the acoustic wave for which the structure is desired to be used.

2,444,912
METHOD AND APPARATUS FOR PUMPING
Albert G. Bodine, Jr., Van Nuys, Calif.
Continuation of application Serial No. 521,576, February 8, 1944. This application July 17, 1947, Serial No. 761,456
16 Claims. (Cl. 103—1)

1. In a pumping system: a fluid conduit having an inlet and an outlet, fluid impelling and check valve means in said conduit between said inlet and said outlet, said means including an oscillatory fluid displacing member for pumping fluid in a forward direction in the conduit, an elastic column of solid material capable of a range of longitudinal elastic deformation allowing a portion thereof to be alternately longitudinally deformed in opposite directions relatively to another portion of the column by virtue of successive compression and expansion waves transmitted longitudinally through the structure of the column, an operative connection between

said deformable portion of said column and said fluid displacing member by which said member is oscillated as a result of said deformation movement of the column, and an elastic-wave gen-

erator operatively connected to said column adapted to continuously transmit alternating compression and expansion waves longitudinally through the structure of the column to cause said alternating longitudinal deformation thereof.

2,444,913

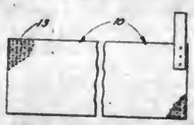
PREPARATION OF ZIRCONIA CONTAINING CATALYSIS

George R. Bond, Jr., Paulsboro, N. J., assignor to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 12, 1944, Serial No. 535,396

11 Claims. (Cl. 252—254)

1. The method of preparing plural oxide catalysts containing zirconia as one of said oxides which comprises admixing an alkali metal zirconium carbonate solution with a soluble inorganic salt whose oxide is insoluble in water alone, and controlling the hydrogen ion concentration of the mixture within the range pH 3 to pH 11 to effect coprecipitation of zirconia and said insoluble oxide.



2,444,914

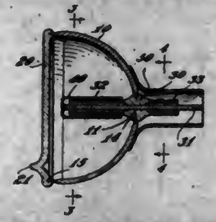
ELECTROLYTIC DEVICE AND METHOD OF MAKING SAME

Joseph B. Brennan, Euclid, Ohio, assignor to Everett D. McCurdy, trustee

Application May 22, 1941, Serial No. 394,664

13 Claims. (Cl. 175—315)

1. An electrode for electrolytic devices comprising a thin sheet of metal having therein from 800 to 1200 pierced openings per square inch providing passageways for the flow of ions therethrough, the openings being surrounded by minute projections composed of the material displaced by the piercing operation, substantially half of said projections being disposed on one side of said sheet and the remaining projections being disposed on the other side thereof, both sides of said sheet being provided with spray deposited, adherent layers of finely divided metallic particles.



2,444,915

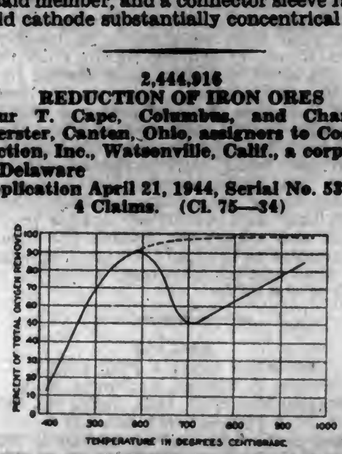
ELECTRON DISCHARGE DEVICE

Phillip J. Cade, Cambridge, Mass., assignor to Photoswitch, Incorporated, Cambridge, Mass., a corporation of Massachusetts

Application February 22, 1945, Serial No. 579,210

3 Claims. (Cl. 250—165)

1. A phototube comprising a hollow substantially hemispherical cathode having a substantially centrally located opening opposite its mouth, a substantially flat transparent cover plate sealed to the rim of said cathode, an anode structure including a connector rod and a tube-like member fastened to the tip of and extending substantially coaxially over said rod, an insulating seal in said opening fastening said rod to, and leading it through said cathode, said seal having a sleeve extending between said rod and said member, and a connector sleeve fastened to said cathode substantially concentrical to said rod.



2,444,916

REDUCTION OF IRON ORES

Arthur T. Cape, Columbus, and Charles V. Foerster, Canton, Ohio, assignors to Coast Reduction, Inc., Watsonville, Calif., a corporation of Delaware

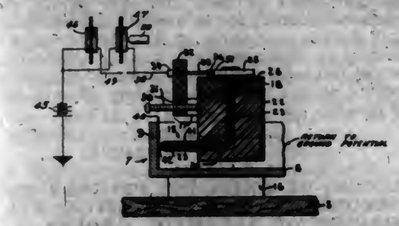
Application April 21, 1944, Serial No. 532,054

4 Claims. (Cl. 75—34)

3. The method of reducing iron ore which consists in mixing intimately with the ore particles a carbonate of the group consisting of sodium, potassium, and barium, the amount of such carbonate being from .25% to 2% by weight of the ore, said mixture having incorporated therein water in sufficient quantity such that when it is subsequently evaporated the surfaces of the ore particles are covered with a layer of discrete particles or discontinuous areas of the carbonate, and then subjecting the coated ore particles to the action of a gaseous reducing agent.

2,444,917

SINGLE-ELECTRODE HIGH-SPEED RECORDING DEVICE



Austin B. J. Clark, Washington, D. C.

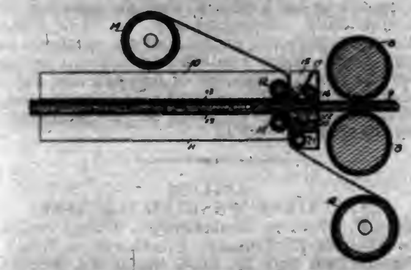
Application July 9, 1945, Serial No. 604,008

3 Claims. (Cl. 346—74)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. An electrical recording device comprising a single marking electrode, at least two input electrode means spaced in arcing relationship to

said electrode, and circuit means feeding each input electrode independently.



2,444,918

METHOD OF MAKING LAMINATED STRUCTURES

Charles N. Cone, Portland, Oreg., assignor to M and M Woodworking Company, Portland, Oreg., a corporation of Oregon

Application March 14, 1941, Serial No. 383,294

3 Claims. (Cl. 154—132)

1. The method of treating the surface of wood veneers to provide a homogeneous and neutral surface therefor, comprising heating an anhydrous thermoplastic adhesive material to a degree to render said material sufficiently plastic to create a satisfactory bond with the wood, applying said material while in said heated condition to the surface of the wood in sufficient quantity to fill and seal existing openings in the wood and to provide a flat level surface over irregularities existing in the surface of the wood, simultaneously applying a sheet of paper over said material, and smoothing said paper while said material is in a plastic state to create a flat level surface for the structure.

2,444,919

RELEASE COUPLING

Robert B. Cotton, Lansdowne, Pa., Richard Joseph Ryan, United States Marines, and John J. Domoj, United States Navy

Application January 4, 1945, Serial No. 571,342

13 Claims. (Cl. 244—3)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A coupling connecting two lines or the like, a buffer through which one of the lines passes, and means on said coupling to release it when the line is moved through the buffer so as to cause the coupling to strike the buffer, said coupling comprising members connected one to each line, one of said members including a cylinder, said releasing means on said coupling including a plunger slidably received in said cylinder, retaining means for said slidable plunger, and spring means disposed to urge said slidable plunger outwardly of said cylinder.

2,444,920

FIRING MECHANISM

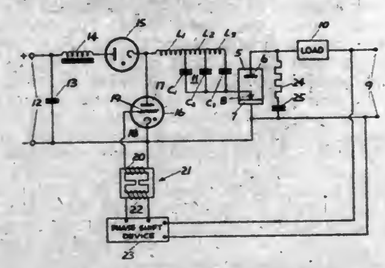
George B. Davis, Jr., Washington, D. C., and Isaac F. Rosenkrantz, Greenbelt, Md.

Application January 13, 1947, Serial No. 721,831

8 Claims. (Cl. 89—27)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

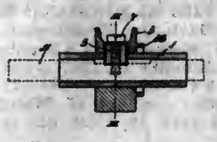
6. A gun firing mechanism comprising, a housing, means forming a longitudinal through slot in said housing having an offset branch extending therefrom, a firing pin in said housing, a stud connected to said firing pin and projecting through and beyond said slot, and a sleeve enclosing said slot including means forming a cam surface engageable with said stud and constructed and arranged whereby rotation of said sleeve positions said stud in said branch.



2,444,921

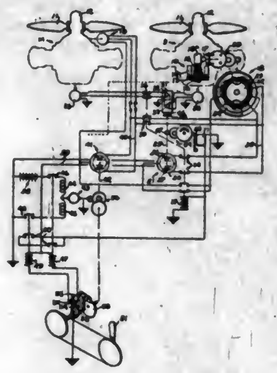
IGNITION CIRCUITS FOR VAPOR DISCHARGE DEVICES

John W. Dawson, West Newton, and Hans Klemperer, Belmont, Mass., assignors to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware



Application May 4, 1946, Serial No. 667,280

3 Claims. (Cl. 315—263)

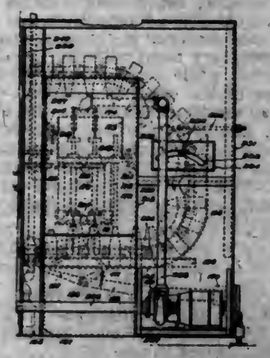


1. In combination, an electrical-space discharge device having an anode, a pool cathode and a resistance-immersion ignitor, means for supplying igniting impulses to said igniter, said means including a source of current, a pulse forming line comprising a combination of inductors and capacitors connected to said source through said ignitor for storing electrical energy from said source, means for discharging said energy to energize said ignitor, said inductors and capacitors being arranged to deliver said stored energy in the form of a substantially rectangular wave of predetermined duration.

2,444,922
MEANS FOR CONNECTING A DRIVEN MEMBER TO A SHAFT
Cornelis Deetman, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 2, 1946, Serial No. 666,669
In Belgium March 5, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires March 5, 1965
2 Claims. (Cl. 287—52.05)

1. A driving device comprising a rotatable driving shaft, a hollow member loosely mounted on said shaft and having a cut-away portion, a driven member rigidly mounted on said hollow member and adapted to be driven by said shaft, clamping means for adjustably securing said driven member to the said shaft, said means including a clamping member extending through said cut-away portion and engaging said shaft and means securing said clamping means to said driven member and pressing the same against said shaft.

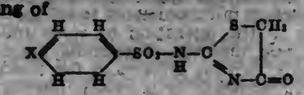
2,444,923
SYNCHRONIZING CONTROL
James W. Drake, Rockford, Ill., assignor to Woodward Governor Company, Rockford, Ill., a corporation of Illinois
Application June 21, 1946, Serial No. 678,213
11 Claims. (Cl. 318—450)



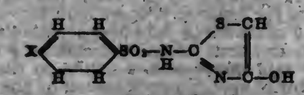
1. For synchronizing two rotary power units, the combination of speed-correcting means adapted to be associated with one of said units, means by which said speed-correcting means may be actuated automatically in accordance with speed deviations between said units including a rotary differential motor, two members one driven by said motor and having a limited lost motion connection with the second member, yieldable means tending to center said second member in the range of the lost motion, braking means for holding said second member releasably against movement, an auxiliary means operable under manual control for effecting separate selective adjustment of said speed-correcting means, and means controlled by said auxiliary means and operable automatically to maintain said brake applied during operation of said speed-correcting means by said automatic means and to hold the brake released during operation of the speed-correcting means under the control of said auxiliary means.

2,444,924
PROCESS OF OXIDIZING PRIMARY OR SECONDARY ALCOHOLIC HYDROXYL GROUPS OR ALDEHYDE GROUPS
Ladislaus Guillaume Farkas and Otjaes Schächter, Jerusalem, Palestine
No Drawing. Application September 28, 1945, Serial No. 619,256. In Palestine October 1, 1944
16 Claims. (Cl. 260—495)

1. A process of non-disruptively oxidizing compounds selected from the class consisting of primary alkanols, secondary alkanols and alkanols, wherein the oxidation is performed in the liquid phase by the combined action of an amount of free bromine which is stoichiometrically small in proportion to the amount of the compound to be oxidized, and an amount stoichiometrically corresponding to the desired amount of oxidation product, of an inorganic oxidizing agent which contains an element selected from the group consisting of halogen and oxygen and which is capable of oxidizing bromide ion to bromine in aqueous solution in the temperature range of about 30°–80° C.



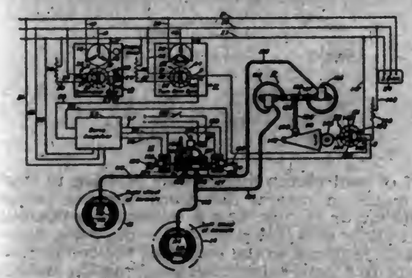
2,444,925
CONTAINER WASHING MACHINE
Waldo F. Fischer, Chattanooga, Tenn., assignor to Charles E. Kimball, Chattanooga, Tenn.
Application July 25, 1940, Serial No. 347,528
24 Claims. (Cl. 134—60)



20. A container washing machine comprising a first tank containing hot caustic liquid, a second tank having an overflow conduit communicating with said first tank, a runway in said first tank and having a portion thereof arranged extending upwardly and outwardly to extend over said second tank, a carriage movable on said runway, a basket on said carriage to contain a container, means to advance said carriage from said first tank to a position over said second tank, and means to draw liquid from said first tank and to drop it by gravity over a container in a basket at said position and into said second tank.

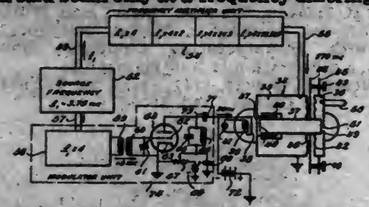
2,444,926
SULFONAMIDE DERIVATIVES
Zoltán Földi, Árpád Gerecs, István Damján, and Rezsö König, Budapest, Hungary; vested in the Attorney General of the United States
No Drawing. Original application June 24, 1940, Serial No. 342,190. Divided and this application April 10, 1941, Serial No. 387,980. In Hungary October 3, 1939
6 Claims. (Cl. 260—239.6)

6. Compounds containing a radical of the class consisting of



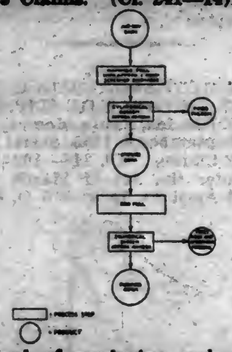
and

in which X is a member of the class consisting of amino, acylamino, alkylamino, and nitro groups.



2,444,927
AUTOMATIC BRAKING SYSTEM FOR AIRCRAFT
Charles E. Gallagher, Doylestown, Pa.
Application October 29, 1945, Serial No. 625,423
7 Claims. (Cl. 244—111)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An automatic braking system for aircraft comprising, a plurality of braking means for said aircraft, a direction responsive device on said aircraft, a pick-off operated thereby to produce a signal corresponding to deviation of said aircraft from a preselected heading, turn rate device, a pick-off operated thereby to produce a signal corresponding to the rate-of-turn of said aircraft from said heading, and means controlled by both of said signals to establish a differential in braking effect in said plurality of braking means.

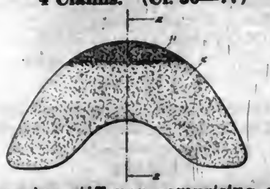


2,444,928
FREQUENCY CONTROL APPARATUS AND METHOD
Arthur E. Harrison, Rockville Centre, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application July 20, 1943, Serial No. 496,716
26 Claims. (Cl. 315—6)

1. Ultra high frequency apparatus comprising means for providing an electron beam having electron grouping therealong at a rate of repetition corresponding to a carrier frequency, means for producing phase modulation of said electron grouping at a predetermined modulation frequency, and means for extracting energy from said beam only at a frequency differing from

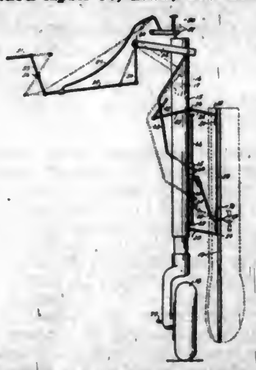
a multiple of said carrier frequency by an integral multiple of said modulation frequency.

2,444,929
METHOD OF TREATING BARK
Raymond S. Hatch, Longview, Wash., assignor to Weyerhaeuser Timber Company, Longview, Wash., a corporation of Washington
Application January 7, 1946, Serial No. 639,696
3 Claims. (Cl. 241—14)



3. A method of producing cork which comprises milling pieces of Douglas fir bark having a moisture content of between about 5% and about 20% by weight in a hammer mill for a time period sufficient to reduce the pieces to a cork content particle size in a range from 1/64 to 1 inch, thereby disintegrating the pieces of bark without abrading or reducing in particle size the aggregates of cork cells contained therein, screening the hammer milled product for separation of the fines on a screen of between about 30 and about 50 mesh, subjecting the coarse residue to a rolling beating action in a rod mill, to pulverize the non-cork content of the mass and shake free the cork aggregates from any adhering material, and screening the product of the rod mill in a screen having a mesh size of between about 30 and about 50 for separation of the relatively large particles of cork from the more finely divided material comprising predominantly bark phloem.

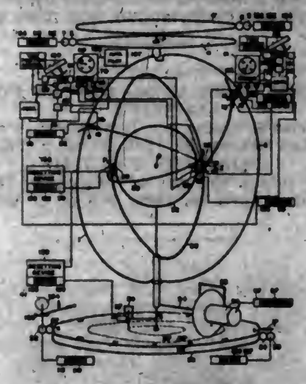
2,444,930
BARIUM CARBONATE-ASBESTOS CATALYST AND PREPARATION THEREOF
Frederick Wardle Haywood and Douglas Stuart Laidler, Watford, England, assignors of one-half to Wild-Barfield Electric Furnaces Limited, Watford, England
Application August 30, 1945, Serial No. 613,572
In Great Britain February 28, 1945
6 Claims. (Cl. 252—205)



1. A catalyst for the treatment of carbonaceous industrial gases consisting essentially of barium carbonate extended with fibrous substantially iron-free asbestos.

2,444,931
BOX TOE STIFFENER
Walter H. Heaton, Franklin, Mass., and William J. Vaccaro, Springvale, Maine, assignors to Beckwith Manufacturing Company, Dover, N. H., a corporation of New Hampshire
Application April 24, 1947, Serial No. 743,660
4 Claims. (Cl. 36—77)

1. A box toe stiffener comprising a felt body saturated with a thermoplastic compound of resin, wax and hydrocarbons, and being thereby rendered thermoplastic and adhesive as a whole, and having a curved tip portion of its area coated with a non-adhesive compound of silicate of soda and finely divided clay.



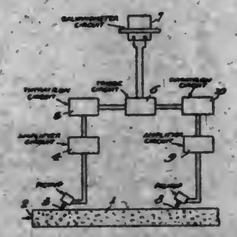
2,444,932
MEANS FOR ACTUATING AIRCRAFT LANDING GEAR BY FORCE OF SLIPSTREAM
Harry C. Higgins, Santa Monica, Calif.
Application September 6, 1945, Serial No. 614,799
12 Claims. (Cl. 244—102)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an aircraft having a wing provided with a well and having a landing gear swingable in a plane normal to the line of flight for retraction into said well, the improvement which comprises panel-shaped means mounted on the landing gear to extend longitudinally along the side thereof and to move therewith and be movable relative thereto, said means being of a shape and so located as to close the well when the gear is in retracted position, and means operable to tilt said means on said gear whereby to utilize the force of the slipstream for moving said landing gear into said well.

2,444,933
AUTOMATIC NAVIGATIONAL DIRECTOR
Robert E. Jasperson, United States Navy
Application August 7, 1946, Serial No. 688,866
18 Claims. (Cl. 318—489)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

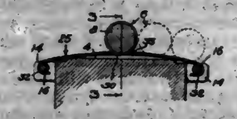
18. In a navigational director for a high speed aircraft or missile, a resetting device having automatic control means connected electrically to an autopilot through a switch comprising: a reversible motor connected to a counter indicator and geared through a clutch mechanism to a cam plate, one or more contacts on said cam plate for operation by a cam follower on said cam plate, said cam follower being grounded; a selective switch; connections between said contacts and the several terminals of said selective switch; means for advancing said switch in response to the operation of said clutch; a starting switch for initiating the cycle of operations of said resetting device; a Selsyn unit connected to said motor and responsive to the operation of some indicating means in said director; a solenoid operated by said starting switch; a solenoid for disengaging said clutch operated by a switch having a trip mechanism for holding it open, said trip mechanism being actuated by said first solenoid to close the switch and thus release the clutch; a reverse switch on said motor and a switch in the operating circuit of said motor actuated by the move-

ment of said clutch into release position to start the motor in reverse direction; another switch in the motor circuit; and a solenoid for opening said switch, said last-named solenoid being energized in response to the return of the counter indicator to a zero value, thus stopping the motor; means on said last-named switch for opening the clutch solenoid switch into its tripped position, the return of the clutch into engagement advancing the selective switch to the next contact position bringing the reversing switch into forward position and closing the motor circuit for forward operation through a by-pass around the other motor circuit switch; a third motor circuit switch normally closed; a solenoid for opening said third switch in response to current passed through the selective switch and the corresponding contact on the cam plate; and means operated by movement of said reversing switch to open the auto-pilot control switch; and means operated in response to the opening of said third switch to close said autopilot control switch.



2,444,934
ANTENNA CONNECTOR
Robert E. Kester and Henry R. Smith, Dayton, Ohio
Application June 3, 1944, Serial No. 539,564
2 Claims. (Cl. 173—324)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An antenna connector clamp comprising a tubular body and two stationary plates secured within said tube, said plates being spaced apart longitudinally of said tube, extending laterally completely across the interior of said tube and presenting oppositely disposed convex bearing surfaces extending longitudinally of said tubular



body at different levels, said plates and tubular body being of electrically conductive material, and a centering funnel-shaped antenna guide secured concentrically within said tube between the innermost of the aforesaid plates and the adjacent end of the tubular body.

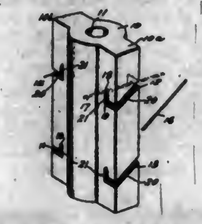
2,444,935
APPARATUS FOR MEASURING SHORT TIME INTERVALS
Henry J. Kurtz, Terrace Park, Ohio
Application October 31, 1944, Serial No. 561,249
2 Claims. (Cl. 175—361)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An apparatus for measuring the time interval required for an impulse wave to travel a measured distance in a selected medium comprising similar initial and final wave impulse sensitive units, each unit including a wave responsive pick-up, an amplifying system and a thyratron system including a thyratron provided with input and output circuits, the input circuit being coupled to said pick-up through the amplifying system, a control system having a circuit coupled to both units, said control system being provided with an electronic tube adapted to maintain a constant plate current regardless of change in plate voltage, said tube including plate and grid circuits, said plate circuit being coupled through a biasing resistance to the plate circuit of the thyratron of the initial unit whereby to start a uniform flow of current in the plate circuit of the electronic tube of the control system with energization of the initial pick-up and the consequent firing of the thyratron by affecting a change in plate potential and said grid circuit of the electronic device of the control system being coupled through a second biasing resistance to the plate circuit of the thyratron of the final unit whereby to stop the uniform flow of current in the grid circuit of the electronic device with energization of the final pick-up, and metering means connected with the control system for determining the quantity and rate of flow in the plate circuit of said electronic tube during said interval.

2,444,936
CARTRIDGE BELT LINK GUIDE
Richard J. MacFarlane, Springfield, Mass., and Harold E. Kershaw, Hartford, Conn.
Application May 2, 1946, Serial No. 666,780
7 Claims. (Cl. 89—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A link guide for a disintegrating-link belt fed machine gun comprising, an elongated body portion having inwardly facing opposed U-shaped ends whereby said link guide is mounted to the gun, said body portion bowed so as to be elevated above the plane of said U-shaped ends, said body portion having a convexly curved central rear portion upwardly inclined so as to prevent an elevated free edge in a plane higher than the remainder of said link guide.

2,444,937
EYELASH CURLER AND MASCARA APPLIER
Ada Marcellus, New York, N. Y.
Application January 3, 1946, Serial No. 638,797
9 Claims. (Cl. 132—32)



2. An eyelash curler and mascara applier, comprising a stationary curved strip for engagement against one's eyelid at a point above the eyelashes, a handle for supporting said strip, a movable curved strip for engagement against said stationary strip for clamping the eyelashes against said stationary strip, a resilient strip mounted upon one of said strips for engaging the eyelashes, handle means for moving said movable strip, and a brush connected with said movable curved strip and having its bristles extending along and slightly above said movable curved strip, and loop-like guide members slidably mounted upon said handle and connected with the ends of said movable curve strip for guiding said curve strip in its movements.

2,444,938
INSULATOR
Albert D. Martin, Jr., Philadelphia, Pa.
Application October 18, 1945, Serial No. 623,159
1 Claim. (Cl. 174—175)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

An insulator for supporting wire comprising an insulating body constructed to be mounted in a fixed relation to the direction of a wire to be supported and having two generally planiform and coplanar and generally V-shaped slots opening on opposite sides of said body at their larger ends, each slot having two vertical parallel sides and two sides converging toward a central point but stopping short of each other, the included

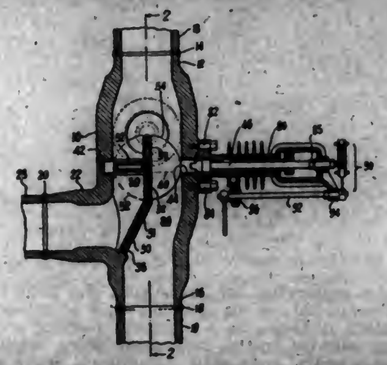
space within the slots extending across a geometrical horizontal line through the slots, one of the converging sides in each slot being shaped to form a transversely restricted part and to constitute a wire seat, the said seat of one slot being parallel to and below said line, the seat of the other slot being parallel to and above said line, said restricted parts and seats being spaced from said line so that a hole is formed through said body the vertical dimension of which between the levels of the extremes of said seats constitutes a wire-receiving space, and whereby the restricted parts and seats of the slots will each fit snugly partly around a supported straight wire, the seats engaging upper and lower sides of such wire at longitudinally spaced parts of the wire, the ma-

jar parts of the slots being substantially wider than said seats, that one of the convergent sides in each slot which is opposite said seat therein being inclined, the said inclined sides being parallel to and at opposite sides of a common plane, said body having also a substantially planiform slot opening laterally from the first named slots through a side of the said body and of a width equal to that of the wider parts of the first named slots, its sides being coincident with respective said inclined sides of the first named slots, angular shoulders parallel to said line being formed on respective sides of said restricted part of each of the first named slots at the junction of the said wider parts of the first named slots and the said restricted parts of the slots.

2,444,939
PRODUCTION OF TITANIUM DIOXIDE PIGMENTS
Max J. Mayer, Scarsdale, N. Y.
No Drawing. Application January 15, 1943, Serial No. 2,560
8 Claims. (Cl. 23—202)

6. A method comprising dialyzing a colloidal dispersion of titanium hydrate nuclei formed by curing by heating a titanium tetrachloride solution to develop nuclei, a stabilizer having polyvalent anions in amount of 20–30 millimols per mol of TiO_2 being present in the solution during curing, and thereby removing extraneous anions.

2,444,940
PRODUCTION OF TITANIUM DIOXIDE PIGMENTS
Max J. Mayer, Scarsdale, N. Y.
No Drawing. Application December 30, 1943, Serial No. 516,213
9 Claims. (Cl. 23—202)

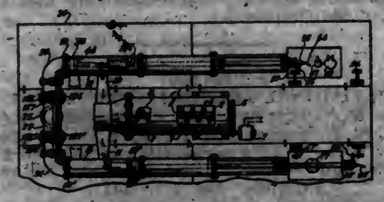


1. A method comprising dialyzing a colloidal dispersion of titanium hydrate nuclei formed by peptizing a precipitate of titanium hydrate with a monobasic acid and curing the resulting sol by heating to develop nuclei, a stabilizer having polyvalent anions in amount of 4–55 millimols per mol of TiO_2 being present in the sol during curing, and thereby removing extraneous anions.

2,444,941
QUICK-CHANGE RADIO ANTENNA MOUNT
Bernal M. Meader, Dayton, Ohio
Application August 11, 1944, Serial No. 549,089
4 Claims. (Cl. 242—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An antenna mounting comprising a plate provided with a tubular sleeve extending therethrough and to an appreciable distance beyond either face thereof, an antenna having a cooperating block of substantially the same exterior dimensions as the interior dimensions of said tubular sleeve fixed to said antenna at a predetermined point longitudinally thereof, and means for securing said block wholly within said tubular sleeve.

2,444,942
VALVE CONSTRUCTION
Benjamin H. Miller, Akron, Ohio, assignor to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey
Application October 5, 1943, Serial No. 504,994
6 Claims. (Cl. 277—19)



4. In a valve construction, a valve body, and a removable diaphragm construction extending across and longitudinally of the valve body and including a plurality of sections normally aligned to separate passages within said body, said valve body being provided with a lateral wall portion removable to present an opening to provide access for removal of said diaphragm sections.

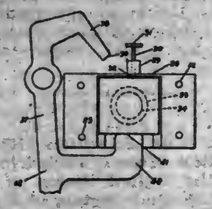
2,444,943
APPARATUS FOR FEEDING CLAY TO MOLDS IN THE MANUFACTURE OF POTTERY DINNERWARE
William J. Miller, Swissvale, Pa., assignor to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Application March 10, 1944, Serial No. 525,830
25 Claims. (Cl. 25—103)

1. Apparatus for feeding plastic ceramic material to a machine for making dinnerware and the like comprising a tubular conduit mounted in fixed position leading to said machine and including a magazine section to be filled to capacity with said material having a side inlet through which plastic material is discharged thereinto, a plunger in said magazine co-axial therewith,

means for moving said plunger forwardly through said magazine section to empty the magazine and force the material out through said conduit, a plastic material pugging and extruding means

having a dealring chamber provided with a discharge outlet and a conduit connected to the magazine inlet and the dealring chamber discharge outlet for conducting pugged material to said magazine.

2,444,944
TOWING APPARATUS
Marvin J. Minter, Detroit, Mich.
Application November 9, 1945, Serial No. 627,769
3 Claims. (Cl. 280—33.44)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A tow bar composed of a tubular member threaded at each end, two clevis-end members threaded to mate with the threads of said tubular member, means associated with said tubular member and said clevis-end members to permit their limited relative movement and means to lubricate said members.

2. Towing apparatus comprising two spaced lugs on a towing vehicle, two differently spaced lugs on a towed vehicle, two tow bars having clevis formations at each end, four members having clevis formations at each end, arranged so that each tow bar is laterally spaced from the other throughout its length and is attached to a towing lug of the two vehicles, by means of the one of the members having said clevis formations at each end, in a normally substantially trapezoidal relationship indicated by a line through the horizontal axis of each of said two laterally spaced tow bars, a line connecting said two spaced lugs on said towing vehicle, and a line connecting said two spaced lugs on said towed vehicle.

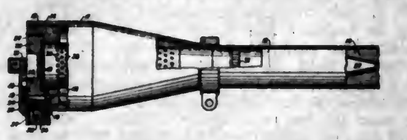
2,444,945
DIOLEFIN EXTRACTION
Charles E. Morrell, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 30, 1944, Serial No. 570,745
4 Claims. (Cl. 260—681.5)

4. An improvement in the separation of butadiene and acetylenes which comprises contacting a mixture of saturated and unsaturated hydrocarbons containing said compounds with a cuprous salt solution containing 1.5 to 5 mols of copper per liter, 10.5 to 11.0 mols total ammonia per liter, 4 mols acetic acid per liter and the balance water, separating the cuprous salt solution from the unabsorbed saturated and unsaturated hydrocarbon mixture, heating the said separated cuprous salt solution to polymerise the acetylenes dissolved therein, filtering the heated cuprous salt solution to separate the acetylene polymer solids, thereby obtaining a filtered solid containing copper salts, washing the polymer solids on the filter with an amine solution having a pH value of at least 10, at temperatures ranging from 50° F. to 200° F., passing the dilute washing solution into a hot bath of ammoniacal cuprous salt solution having a pH value of at least 10, and containing at least about 1.5 mols per liter of cuprous copper, and heating the ammoniacal cuprous salt solution to drive off water and obtain a solution having at least 1.5 mols per liter of cuprous copper.

2,444,946
PUNCH
James F. Murphy, Philadelphia, Pa.
Application December 14, 1945, Serial No. 635,134
15 Claims. (Cl. 164—110)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A punch for forming a hole in a workpiece comprising a die having a central opening defining the line of punch, a jig for supporting the workpiece in the line of punch and relative to said die, a pair of opposed notches in said jig serving to support the workpiece for reciprocation relative to said jig and said die, an adjustable screw in said jig having an extremity designed to serve as a stop for limiting reciprocation of the workpiece in one direction, and an arm mounted on said jig for rotation in a plane transverse to said line of punch and including the workpiece, a finger on said arm adapted upon rotation of said arm in one direction to cause reciprocation of the workpiece toward said stop and adapted upon rotation of said arm to its extreme position to clamp the work piece against said stop to prevent movement thereof in said jig, a second finger on said arm spaced from said first finger and in opposed relation thereto adapted upon rotation of said arm in the other direction to cause reciprocation of the workpiece away from said stop and to eject the workpiece from said jig.

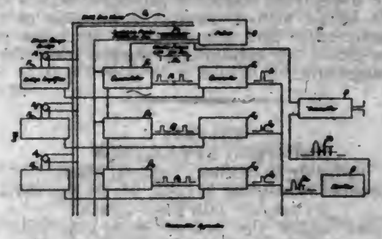
2,444,947
LUBRICANT
John M. Musselman, South Euclid, and Herman P. Lankelma, Shaker Heights, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application May 17, 1945, Serial No. 594,378
12 Claims. (Cl. 252—32.7)



1. As a lubricant and as an addition agent for lubricating oils and greases to inhibit their deterioration and improve their E. P. properties, a heavy metal compound of the reaction product of a halogenated oxygen-containing organic com-

pound reacted with an amount of a phosphorus sulfide at least about equivalent to the theoretical amount required to replace the oxygen in the halogenated oxygen-containing organic compound with sulfur from the sulfide, reacted at a temperature above 270° F. to form a reaction product which is separable from a phosphorus and oxygen-containing by-product residue.

2,444,948
LUBRICANT
John M. Musselman, South Euclid, and Herman P. Lankelma, Shaker Heights, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application May 17, 1945, Serial No. 594,379
8 Claims. (Cl. 252—46.7)

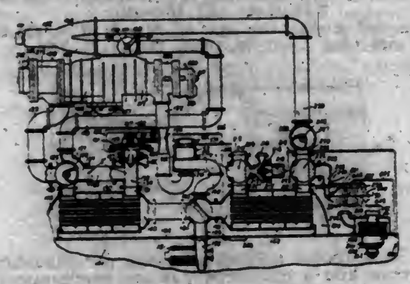


1. As a lubricant and as an addition agent for lubricating oils and greases to inhibit their deterioration and improve their E. P. properties, the reaction product of a halogenated oxygen-containing organic compound reacted with an amount of a phosphorus sulfide at least about equivalent to the theoretical amount required to replace the oxygen in the halogenated oxygen-containing organic compound with sulfur from the sulfide, reacted at a temperature above 270° F. to form a reaction product which is separable from a phosphorus and oxygen-containing by-product residue.

2,444,949
RECOILLESS FIREARM
Clarence Walton Musser, Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of War
Application November 14, 1945, Serial No. 628,647
7 Claims. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a recoilless firearm, the combination of a barrel, a chamber communicating with said barrel and having a rear diameter substantially larger than that of the barrel's bore, an ammunition round comprising a projectile positioned in the rear of said bore and a cylindrical cartridge case having a multi perforated metal wall in communication at its forward end with said projectile and being of substantially smaller diameter than the rear portion of said chamber, a rim extending radially from the rear portion of said cartridge case, a ring-like reliner removably fixed by its outer periphery within said chamber's rear portion and having spaced Venturi-like openings extending axially therethrough to form a substantially annular orifice leading from the chamber's interior through the reliner and to the rear exterior of the chamber and further having a concentric inner periphery whose rearward portion is threaded and whose forward portion is diametrally reduced to encircle said cartridge case immediately ahead of its said rear rim whereby to restrain the case against forward movement and to support same in radially spaced relation to the chamber walls, and a breech block secured in said reliner's rear threaded portion immediately behind said cartridge case rim and also in radially spaced relation to the reliner's walls therearound whereby to restrain the cartridge case against rearward movement and to form a continuation of the inner wall of the substantially annular orifice which leads to the rear exterior of the chamber.

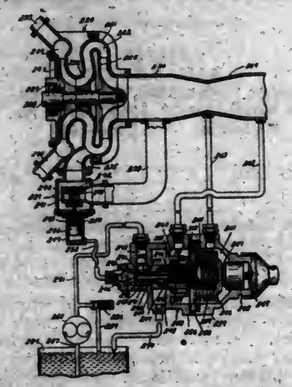
2,444,950
MULTISIGNAL TRANSMISSION SYSTEM
Myron H. Nichols and John F. Brinster, Princeton, N. J., assignors to Research Corporation, New York, N. Y., a corporation of New York
Application October 30, 1945, Serial No. 625,590
6 Claims. (Cl. 177—351)



5. A system for metering at a distance a plurality of vehicle-borne sources of intelligence comprising a vehicle-borne transmitting assembly including means providing periodic pulses having a frequency F equal to the rate at which the signal from each intelligence source is to be sampled, means providing periodic pulses synchronized with said first pulses and having a frequency Fn where n is a whole number not less than the number of signals to be transmitted, a plurality of switch circuits corresponding in number to the several signals to be transmitted and interconnected in a linear series so that the shutting off of any one of said switch circuits except the last switch circuit in the series actuates the next switch circuit in the series, means energized by said periodic pulses of frequency F to actuate the first switch circuit of said series, means connecting said periodic pulses of frequency Fn to said switch circuits in common to shut off the one of said switch circuits which is active upon arrival of a pulse, means for modulating the successive pulses from said switch circuits successively with the several signals to be transmitted, and means for transmitting the modulated pulses and the pulses of frequency F over a single radio channel; and a receiving station assembly comprising a radio signal receiver tunable to said transmitting means; means for selecting from the received signal said periodic pulses of frequency F, means actuated by said pulses of frequency F for segregating the received signal into periods synchronic with said pulses, and means for integrating the segregated signal periods.

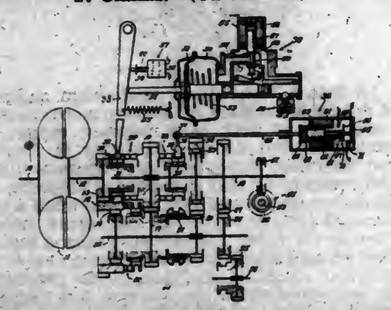
2,444,951
CABIN CONDITIONS CONTROLLING APPARATUS
Wm W. Paget, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application April 9, 1943, Serial No. 482,422
65 Claims. (Cl. 257—3)

2. In combination, in an aircraft cabin conditions controlling system, a supercharger having intermediate and terminal discharges, a pair of heat exchangers, a connection from the intermediate discharge of said supercharger to one course of one of said heat exchangers, a rammed inlet connection for one course of the other heat exchanger, and valve means having controlling means governed by conditions varying with the altitude of the aircraft for selectively connecting said terminal discharge to the remaining course of either of said heat exchangers and through such course to an aircraft cabin.



38. In combination, an aircraft cabin, a supercharger having a primary stage and a secondary stage each having an intake and a discharge, a heat exchanger having two courses, a discharge line from the primary stage of said supercharger, a discharge line from the secondary stage of said supercharger, an intake passage for external air for the primary stage of said supercharger, means forming a space selectively connectible with the discharge line from the primary stage of the supercharger either directly or through one of the courses of said heat exchanger, a conduit for connecting said space with the intake of the secondary stage of said supercharger, valve means movable to connect said intake passage to the intake of said secondary stage or to connect the intake of said secondary stage with said conduit, valve means

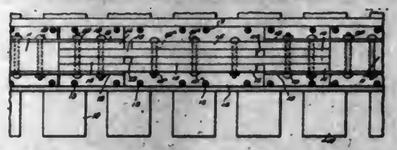
movable to connect said space directly or through the first mentioned course of said heat exchanger with the discharge line from the primary stage of the supercharger, valve means movable to connect the discharge line from the secondary stage of the supercharger alternatively through the other course of the heat exchanger or independently of said heat exchanger with said aircraft cabin, and operating means for said valve means including a cabin temperature controlled operating means for said second mentioned valve means effective during flight at altitudes below a predetermined height, and an altitude controlled, operating device for effecting power positioning of each of said valve means in predetermined positions upon the attainment of said cabin to a predetermined altitude.



56. In combination, a multi-stage supercharger having the discharge of the second stage thereof adapted to deliver air to an aircraft cabin or the like and the discharge from the first stage thereof connected with the intake of the second stage of the supercharger and having valve controlled means for variably venting the discharge from said first stage to atmosphere, said valve controlled means having a control device governed by the mass flow in the discharge line from the second stage of said supercharger and operating on increase in mass flow for effecting an increased venting by said valve controlled means.

2,444,952
PUMP CONTROL MECHANISM
Wm W. Paget, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application April 11, 1945, Serial No. 587,663
23 Claims. (Cl. 98—1.5)

1. A compressor for delivering air to an aircraft cabin comprising, in combination, a casing having a chamber containing means for compressing air, an intake line for said chamber, a discharge line through which air is discharged when a predetermined compression is reached, an opening through which air may be discharged from said chamber before said predetermined compression is reached, valve means for controlling the flow of air through said opening, a flow sensitive device disposed in said discharge line, and means under the influence of said flow sensitive device and operative to control said valve means in a manner to maintain constant the flow of air in said discharge line.



2,444,953
TRANSMISSION CONTROL SYSTEM
John B. Polomski, Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application September 15, 1942, Serial No. 458,479
17 Claims. (Cl. 74—472)

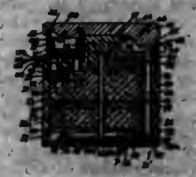
1. A variable speed ratio power transmitting device comprising input and output members, a plurality of gear trains for driving the output member from the input member, at least two coupling means for establishing said gear trains, and means for controlling the operation of the coupling means, said control means including an accelerator for controlling the power impressed on said input member, means under the control of

said accelerator for simultaneously effecting an operation of the coupling means in one sense when said accelerator is moved to its minimum power setting and means under the control of said accelerator for individually effecting an operation of the coupling means in the opposite sense when said accelerator is moved to its maximum power setting.

2,444,954
RAIL JOINT
George Rademaker, Chicago, Ill.
Application November 29, 1944, Serial No. 565,684
6 Claims. (Cl. 238—151)

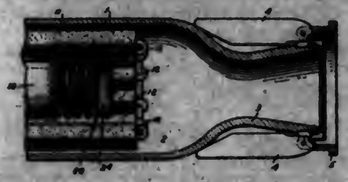
1. In combination with a pair of aligned and longitudinally spaced rails having pairs of fish plates directly connected thereto respectively, an expansion joint comprising a plurality of sets of vertical plates positioned between the ends of adjacent rail extremities and between said fish plates, alternate plates abutting opposite rail extremities and secured thereto by said fish plates, the other ends of said plates being spaced from opposite rail extremities, and means holding said plates in longitudinally slidable related assembly.

2. The combination of claim 1, wherein said means includes longitudinal slots in registerable position in said plates, and bolts extending through said slots.



2,444,955
TIME SWITCH
Luther Ringer, Berrien Springs, Mich., assignor to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York
Application October 14, 1944, Serial No. 558,711
8 Claims. (Cl. 74—84)

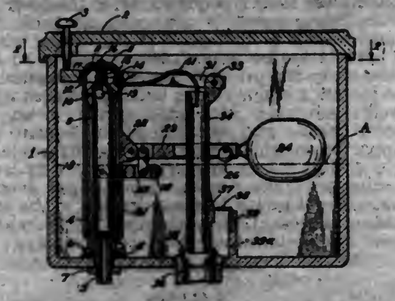
1. An intermittent drive mechanism comprising a rotatable member, an electric motor in driving engagement with said member, means for intermittently energizing said motor at uniform spaced intervals, means rendered operative upon partial rotation of said member for stopping the rotational movement of said member upon a predetermined further rotational movement thereof, and means for rendering said stop means inoperative when said motor is deenergized.



2,444,956
LIGHTER
George Philip Schmitt, New York, N. Y., assignor to Cardinal Products Inc., New York, N. Y., a corporation of New York
Application May 12, 1944, Serial No. 535,231
9 Claims. (Cl. 67—7)

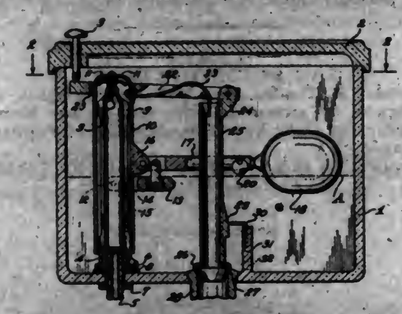
5. A lighter comprising a casing, a holder removably attached to said casing, said holder being open at its top for receiving therein the tip of a cigarette, a catalyst fixed in said holder, said casing adapted to hold vaporizable fuel, valve means below said catalyst for controlling the flow of vaporized fuel to the catalyst, air-admission means below said catalyst enabling atmospheric air to enter said casing to mix with

said fuel, means for operating said valve means and said air-admission means, said means including a lever fulcrumed in said casing, means operable from the top of said casing for actuating said lever, and means engageable with said lever for actuating said valve when said lever is actuated.



2,444,957
FLASH REDUCER
Leslie A. Skinner, Berkeley, Calif., assignor to United States of America as represented by the Secretary of War
Application September 27, 1944, Serial No. 556,051
5 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. In a rocket projectile having a combustion chamber and a discharge passage communicating with said chamber, the improvement comprising a container secured in said chamber forwardly of said discharge passage, said container being filled with a flash-reducing agent, said container having an opening adjacent said discharge passage and means normally sealing said opening, said sealing means being removable upon development of pressure within said combustion chamber to allow said flash-reducing agent to disperse through said opening.

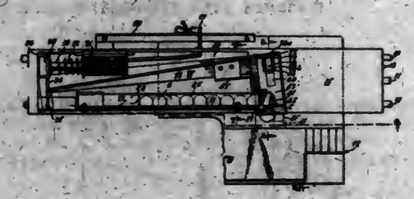


2,444,958
FLUSH TANK VALVE
Harry Ford Smith, Lexington, Ohio, assignor to Mansfield Sanitary Pottery, Inc., Perrysville, Ohio, a corporation of Ohio
Application June 30, 1943, Serial No. 492,845
5 Claims. (Cl. 137—194)

5. A valve device comprising a substantially vertical liquid carrying inlet pipe having an open top end provided with a valve seat, an outer pipe around and spaced from said inlet pipe and having an air inlet opening at its upper end, a valve within said outer pipe movable longitudinally and transversely of said inlet pipe and having a surface to seat on said valve seat, and means movable as a unit with said valve and utilizing forces of liquid flowing out of said inlet pipe to maintain said valve centrally of said inlet pipe, said means comprising a member extending down into said inlet pipe to define therewith an annular space for liquid flow, and a deflector disposed to intercept liquid flowing from said space and shaped to deflect such liquid outwardly and downwardly in said outer pipe, said means being freely movable by the flowing liquid laterally in

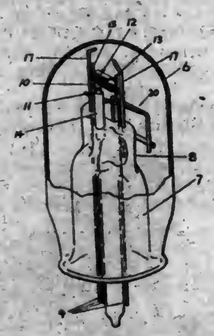
the direction of greatest volume of flow from said annular space with coincident movement of said member radially in the inlet pipe and resultant decrease in the volume of flow in said direction.

2,444,959
FLUSH VALVE MECHANISM FOR TANKS
Harry Ford Smith, Lexington, Ohio, assignor to Mansfield Sanitary Pottery, Inc., Perrysville, Ohio, a corporation of Ohio
Application March 31, 1944, Serial No. 528,907
19 Claims. (Cl. 4—53)



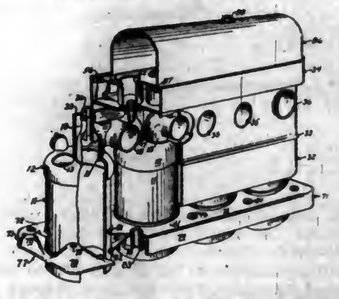
1. In a flush tank having an outlet opening, a flush valve for closing said opening, an overflow pipe having an open upper end and said valve being positioned thereon near its lower end, pipe suspending means connected to the upper portion of said pipe to lift it vertically to open the valve and to permit its lower end to swing freely laterally in one direction in a predetermined plane to an extent sufficient to move said valve into final open position, and means connected to said pipe by which said valve is held in open position.

2,444,960
PROCESS OF PREPARING CARBINOLS
Lee Irvin Smith and Joseph A. Sprung, Minneapolis, Minn., assignors to Regents of the University of Minnesota, Minneapolis, Minn., a corporation of Minnesota
No Drawing. Continuation of application Serial No. 453,282, August 1, 1942. This application August 31, 1942, Serial No. 456,791
3 Claims. (Cl. 260—633)



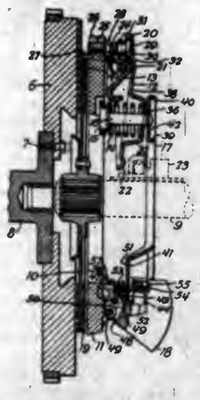
1. 4,8,12-trimethy - tridecyl - beta - haloethylmethyl-carbinol.

2,444,961
TOY RAILROAD ACCESSORIES
Richard G. Smith, Amsterdam, N. Y.
Application September 21, 1944, Serial No. 555,068
15 Claims. (Cl. 46—216)



1. In combination, a toy railroad track, a toy car having the usual trucks on the track and a car platform supported above the track, a toy unloading platform at the height of the car platform and having a fixed position relative to the track whereby a space of substantial width is provided between the car platform and the unloading platform, the car having an article support laterally movable from a position above the platform of the car across said space whereby an article on the support can be moved toward the unloading platform, a pusher for pushing the article off the article support and onto the unloading platform, and common operating means for both the article support and pusher.

2,444,962
ELECTRODE STRUCTURE FOR ELECTRICAL GASEOUS DISCHARGE TUBES
Paul W. Stutsman, Needham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application March 27, 1946, Serial No. 657,422
8 Claims. (Cl. 250—27.5)

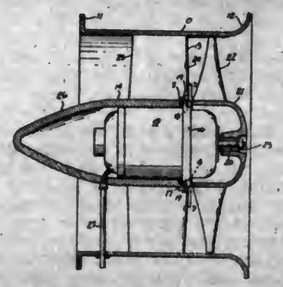


1. A gaseous electrical space discharge device comprising an envelope, an ionizable gas in said envelope for supporting a discharge, a main anode and a cathode in said envelope between which an arc discharge is adapted to occur, an auxiliary anode partially surrounding said cathode and positioned on the remote side of said cathode from said main anode, said auxiliary anode being adapted to coact with said cathode to provide a glow discharge therebetween, said auxiliary anode being spaced from said cathode by a distance substantially equal to the minimum potential breakdown distance.

2,444,963
CYLINDER BLOCK
Lloyd M. Taylor, San Leandro, Calif., assignor to Taylor Engines, Inc., San Francisco, Calif., a corporation of Nevada
Application June 2, 1944, Serial No. 538,392
9 Claims. (Cl. 230—238)

1. A fabricated cylinder block, said cylinder block consisting of a plurality of separately mounted cylinders, a head on each cylinder having valve ports in the top thereof, intake and exhaust conduits communicating with said valve ports and united to said head, a valve guide support in each of said conduits, a water jacket surrounding said cylinders, said heads and said conduits in spaced relationship thereto; said water jacket being supported by the tops of said valve guide supports and connecting all of said supports rigidly together, a box-like structure united to the top of said water jacket, and a cylinder hold-down unit for collecting stresses from the walls of said cylinders and distributing the stresses to a crankcase or other support for the block; said hold-down unit having a plurality of large openings therein for passing said cylinders and being directly united to said cylinders adjacent said openings.

2,444,964
AUTOMATIC CLUTCH
W. Vincent Thelander, Auburn, Ind., assignor to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Application April 27, 1944, Serial No. 532,969
13 Claims. (Cl. 192—105)

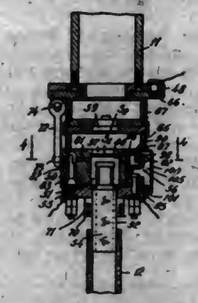


1. In a clutch comprising a driving element and a driven element, a pressure plate for holding the driving and driven elements frictionally engaged, a plurality of levers for communicating pressure to the pressure plate under spring pressure whereby to cause engagement of the clutch, supports for said levers carried by the driving element and each comprising a pivot for the associated lever near the outer end of the lever, said levers being operable manually at their inner ends, a single compressible spring means adapted to apply pressure to each lever whereby to apply pressure to the pressure plate for engagement of the clutch, a single spring loading element operatively associated with said spring means, the spring means and spring loading element being supported on and connected in operative relationship to the levers, and a centrifugal fly-weight turning with the driving element and arranged to move said spring loading element in the spring loading direction when the driving element exceeds a predetermined speed of rotation.

2,444,965
CATALYST COMPOSITION
Charles L. Thomas, Riverside, Ill., and Jacque C. Morrell, Chevy Chase, Md., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application May 26, 1943, Serial No. 488,560
4 Claims. (Cl. 252—206)

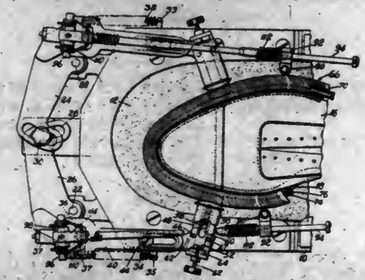
1. A catalyst consisting essentially of from 50% to 90% of aluminum oxide, from 5% to 30% of a clay selected from the group consisting of kaolin and montmorillonite, and from 4% to 20% of an oxide of a metal selected from the elements in the left-hand columns of groups V and VI of the periodic table.

2,444,966
FAN AND MOTOR DEVICE
Theodor H. Troller, New Philadelphia, Ohio, assignor, by mesne assignments, to Joy Manufacturing Company, a corporation of Pennsylvania
Application January 29, 1944, Serial No. 520,183
13 Claims. (Cl. 230—117)



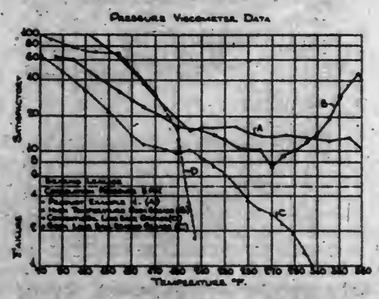
12. In an axial flow fan structure comprising an electric motor having a shaft with a fan mounted thereon, the improvement of a fan and motor housing comprising a structure having an outer annular wall, a centrally disposed annular body, and a plurality of stationary vanes having their outer ends connected to the outer annular wall and having their inner ends connected to the annular body, said stationary vanes supporting the annular body within the outer annular wall, said annular body having a transversely disposed abutment surface, said motor having outwardly extending abutment means, said motor being mounted in the annular body with the outwardly extending abutment means abutting against the transversely disposed abutment surface, and means securing the outwardly extending abutment means to the transversely disposed abutment surface for holding the motor against longitudinal movement, the stationary vanes at their inner ends having shoulder portions angularly disposed with reference to the transversely disposed abutment surface, said outwardly extending abutment means engaging said shoulder portions and axially aligning the motor shaft and fan substantially concentric within the outer annular wall.

2,444,967
OSCILLATOR
Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application March 23, 1936, Serial No. 70,365
6 Claims. (Cl. 177—386)



1. A device for producing mechanical vibrations of very high frequencies, comprising a plate, a thin member supporting said plate at its edges and means formed integral with the plate consisting of a plurality of concentric magnetostrictive rings, a plurality of coils surrounding said rings, one coil being positioned on the external and one on the internal side of each of said rings, a casing covering said diaphragm, and magnetic means supported from said casing and projecting into the space between said rings.

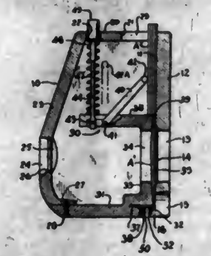
2,444,968
MASS SPECTROMETRY
Harold W. Washburn, Pasadena, Calif., assignor to Consolidated Engineering Corporation, Pasadena, Calif., a corporation of California
Application December 9, 1943, Serial No. 513,529
4 Claims. (Cl. 250—41.9)



2. In a mass spectrometer provided with an ionization chamber, means for admitting molecules to be ionized into the chamber, an electron emitting element, means for propelling the emitted electrons against molecules in the chamber to convert the molecules into ions, and electrodes disposed in the neighborhood of the electron emitting element and the ionization chamber for impressing a propelling potential on the ions thus formed, the combination which comprises a separate chamber in which the electron emitting element is mounted, a conduit connecting the separate chamber to the ionization chamber to permit the emitted electrons to enter the ionization chamber, an ion outlet from the ionization chamber comprising an aperture in one of the electrodes, a shield at the side of the electron-emitting element opposite the last-mentioned electrode, and means for maintaining said shield and the last-mentioned electrode at substantially the same potential.

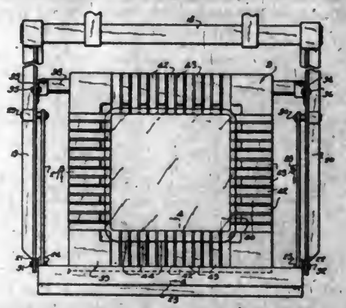
2,444,969
WELT HOLD-DOWN
Charles K. Woodman, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 15, 1946, Serial No. 683,653
10 Claims. (Cl. 12—33)

9. A welt holddown comprising sole gages adapted to engage opposite edges of the forepart of a shoe sole, a U-shaped, flexible welt pressing member disposed above said gages and capable of conforming to the forepart of a shoe, presser plates carried by the sole gages, said plates being movable relatively to said gages and arranged to engage the outer face of the welt pressing member, spring means for yieldingly pressing each of said plates independently inward against the outer face of the welt pressing member, to press said member into the welt crease of the shoe, and adjustable means for positively limiting outward movement of the plates against the tension of the spring means.



2,444,970
GREASE COMPOSITIONS
John C. Zimmer, Union, and Gordon W. Duncan, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 30, 1944, Serial No. 570,785
10 Claims. (Cl. 252—33.2)

1. A grease composition comprising a mineral lubricating oil and sufficient of the complex reaction product of an oil-soluble metal sulfonate having a molecular weight of approximately 300 to 600 and a salt of an acid selected from the



group consisting of low molecular weight aliphatic carboxylic acids, in which at least one cation in the above salts is polyvalent, to thicken the mineral oil to a grease consistency, said complex reaction product being produced by dissolving said sulfonate in said mineral oil and reacting said sulfonate with said salt in the presence of heat.

2,444,971
FILM VIEWER HAVING A MAGAZINE FOR CONSECUTIVELY VIEWING FILMS
Hobart Baker, New Hyde Park, N. Y.
Application February 28, 1945, Serial No. 580,144
11 Claims. (Cl. 40—78)

1. A device of the character described which comprises a casing having a magazine in its upper portion, a film guide below the magazine, a surface forming the front wall of the magazine and of the film guide, said casing being constructed with a light opening adjacent the film guide, and an orifice symmetrically alined with and spaced from the light opening, a pressure device arranged to press a mounted film against the part of the magazine formed by said surface, and means for releasing said pressure device to allow a film to fall by gravity into alinement with the light opening.

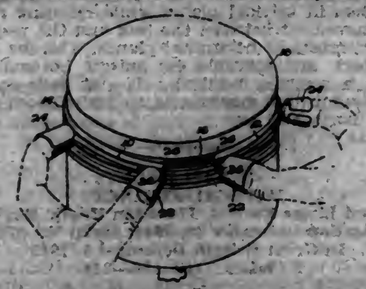
2,444,972
APPARATUS FOR TEMPERING GLASS SHEETS OR PLATES
William P. Bamford, Maumee, and John D. Hemley, Toledo, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application March 30, 1942, Serial No. 436,758
4 Claims. (Cl. 49—45)

1. An apparatus for supporting a glass sheet during tempering, comprising a mold member having a front face inclined to the vertical, said front face being provided with transverse notches at least some of which are substantially vertical resulting in spaced ribs, said ribs being partially cut away to provide a recessed portion in the front face of said mold member for receiving the sheet therein, and maintaining said sheet freely supported at its lower edge upon the ribs at the bottom of the mold member and resting freely against the inclined front face thereof.

2,444,973
DIAPER
Albert L. Best, Darien, Conn.
Application October 16, 1945, Serial No. 622,530
1 Claim. (Cl. 128—284)

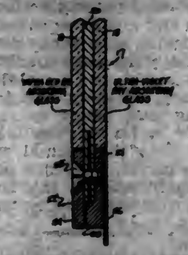
A diaper comprising a backing sheet formed of a rectangular flexible waterproof film of non-fibrous organic plastic material having pockets at two opposing ends, said pockets opening toward the center of the backing, a disposable absorbent pad having its ends disposed within said pockets, the mouth of each of said pockets having a width less than the width of said pad and the longitudinal edges of said pad being cut so that said pad can be accommodated in said constricted pocket openings.

2,444,974
TRIP-ROPE TENSIONING AND RELEASING DEVICE
Elmer S. Boston, Earlville, Ill.
Application September 21, 1944, Serial No. 555,181
3 Claims. (Cl. 280—150)



3. A releasable tensioning device for a trip-rope used with agricultural implements detachably connected to means for drawing the implement, including in combination, a pulley movably secured to the drawing means and through which extends the free end of the trip-rope and having an enlarged opening radially outward of the pulley wheel, and a weight secured to the trip-rope beyond said supporting means, said weight being sufficient to hold the rope taut and of a size to pass through the opening in said pulley, whereby said weight maintains the rope taut and releasably secures the trip-rope to the drawing means.

2,444,975
PISTON RING TOOL
Harry M. Bramberry, Sr., New Castle, Ind.
Application March 14, 1945, Serial No. 582,663
1 Claim. (Cl. 29—222)



A single piece tool for use in applying thrust against one end of a split piston ring, comprising an elongated metal strip longitudinally curved on the arc of a circle, the length of said strip being less than one-fourth of the circumference of the circle, thumb and finger receiving thimbles formed integrally with the strip at the opposite ends thereof and projecting from the convex side of the curved strip at substantially right angles

thereto, and a ring engaging member formed integrally with said strip and projecting from the concave side thereof at the end provided with the thumb receiving thimble and extending in the opposite direction from said thimble, the strip

at the end thereof opposite said ring engaging member being transversely concave throughout a longitudinally-extending portion thereof by means of which the tool may be located with respect to the exterior surface of the ring.

2,444,976
ABSORPTION GLASSES
Wilbur F. Brown, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application April 28, 1942, Serial No. 440,818
2 Claims. (Cl. 20—56.5)

2. A transparent closure for sight openings to be used in airplanes or the like, including two sheets of glass arranged in parallel relationship, one of said sheets being a sheet of glass for absorbing ultra-violet rays having approximately the following composition:

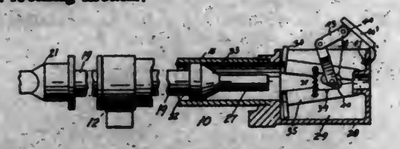
	Per cent
SiO_2	65.6
$Al_2O_3+Fe_2O_3$	.4
CaO	11.8
Na_2O	12.2
As_2O_5	.5
TiO_2	7.5
CeO_2	2.0
	100.0

and the other sheet being infra-red ray absorbing glass.

2,444,977
LAND LEVELER
Marion A. Clark, Tulare, Calif., assignor, by direct and mesne assignments, to Albert G. Gurries, Gilroy, Calif.
Application November 12, 1945, Serial No. 628,227
13 Claims. (Cl. 37—153)

1. A land leveler comprising an elongated, wheel-supported front frame section, an elongated rear frame section, said frame sections lapping to a substantial extent at adjacent ends, means relatively vertically swingably hinging the rear frame section at its front end to the front frame section, a wheel supporting the rear frame sec-

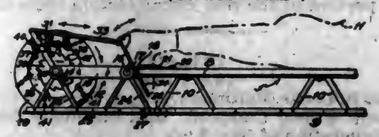
tion at its rear end, a transverse scraper blade vertically swingably mounted in connection with the front frame section rearwardly of the front end of the rear frame section, and an upstanding connecting unit extending between the blade and the portion of the rear frame section thereabove.



2,444,978
CLOSURE
Giles B. Cooke, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application November 8, 1944, Serial No. 562,561
3 Claims. (Cl. 215—40)

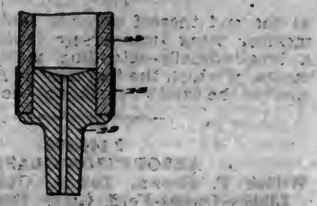
1. A container closure having a flexible, resilient sealing liner comprising a compressible, sealing layer comprising a water-insoluble, glue-acid reaction product having homogeneously dispersed throughout minute bubbles of a gas sealed in the said layer, said layer being deposited from an aqueous liquid containing a water-soluble, glue-acid addition product, an insolubilizing agent, a plasticizer and minute bubbles of a gas homogeneously dispersed therein.

2,444,979
TELESCOPING DRAWBAR
Delmar R. Conrad and Frank M. Reynolds, San Gabriel, Calif.
Application August 6, 1945, Serial No. 609,062
5 Claims. (Cl. 280—33.14)



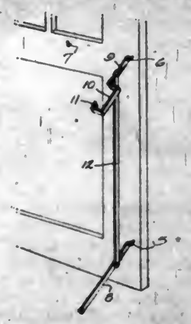
1. In a telescoping drawbar, a support, a pull bar slidably mounted in said support, said pull bar having a head thereon, said support including a housing, a closure movable on the housing, shiftable locking means in the housing engaging the pull bar to limit its movement, and means operated by movement of said closure for shifting said locking means.

2. In a telescoping drawbar, a pair of end members each having a portion adapted to be connected to a vehicle, each of said end members having an aperture therethrough, a tube connecting said end members, one of said end members having a chamber, a pull bar mounted in said tube, said pull bar including one end passing through the aperture in one of said end members, said pull bar having a diameter less than the internal diameter of the tube, said pull bar having a head thereon, said head including a cylindrical portion slidable in said tube, said head also including a frusto-conical portion, said frusto-conical portion having a cylindrical pilot there-



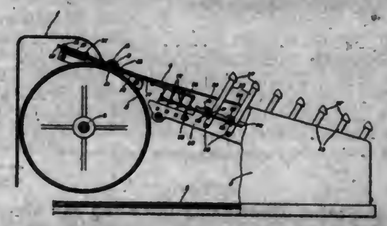
on, said chamber having a bore therein receiving said pilot, a pair of clamping arms pivotally mounted in said chamber, each of said arms including a semi-cylindrical shoulder adapted to engage one face of said head, a plurality of cam members engaging said arms, a lever connected to each of said cam members, and spring means normally urging said clamping arms to a position to engage said head.

2,444,980
RIDER PROPELLED VEHICLE
Clyde Cummins, Middletown, Ind.
Application December 20, 1946, Serial No. 717,371
8 Claims. (Cl. 280—12.14)



1. In an occupant driven toy vehicle of the class wherein the rider rides in a prone position and face down and including a platform for supporting the rider, rails extending rearwardly of said platform, an axle journaled at its ends in said rails, a ground engaging wheel keyed to said axle and disposed to engage the supporting surface of the toy, said wheel being located rearwardly of said platform, a ratchet wheel keyed to said axle, a crank rotatably connected to the axle, a foot pedal pivotally supported between said rails and rearwardly of the platform adapted to be engaged by a foot of the rider, a connecting rod pivotally connected at one end to the free end of said crank and at its opposite end to one end of said foot pedal, and a pawl pivotally connected to the crank for engaging and rotating the ratchet wheel when the crank is rocked in one direction and for riding over the teeth of the ratchet wheel when the crank is rocked in the other direction by an oscillating movement of the foot pedal, for propelling said vehicle in one direction.

2,444,982
MEDICAL SYRINGE
Samuel James Everett, Thornton Heath, England
Application December 29, 1944, Serial No. 570,389
In Great Britain December 1, 1943
2 Claims. (Cl. 128—218)

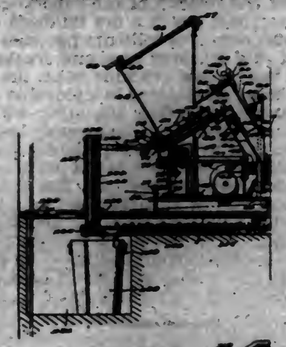


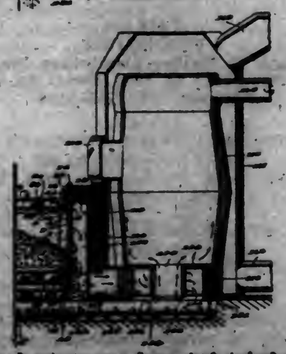
1. A medical syringe comprising a glass barrel, a technical porcelain front closure member having an integral nozzle portion at one end, the other end of said porcelain closure member extending into and in sliding contact with the front end of said barrel, said front closure member having substantially the same coefficient of expansion as said glass barrel, and a metal ring disposed on the barrel and adjacent the front end thereof for clamping said barrel to said front closure member, said metal ring having an internal diameter less than the normal external diameter of said glass barrel, the front part of said barrel being thus compressed by said ring into clamping engagement with said closure member.

2,444,981
DOORSTOP
James A. Dailey, Milwaukee, Wis.
Application December 5, 1946, Serial No. 714,233
6 Claims. (Cl. 292—338)

1. A door stop device comprising a door stop member, a handle lever member, means for mounting the respective members on a door, said mounting means comprising supports for both members, said supports providing aligned vertical fulcrum means and vertically spaced horizontal fulcrum means about which the respective members are respectively oscillatable both horizontally and vertically, and a link connecting said members, said members and link having horizontal fulcrum means affording relative movement between the link and the respective members in vertical planes while resisting relative movement between the link and the respective members in horizontal planes, whereby said members are movable in unison horizontally about a common vertical axis and have corresponding pivotal movements vertically about separate horizontal axes.

2,444,983
LUMBER FOOTAGE CALCULATOR
Elmo A. Ferguson, North Sacramento, Calif.
Application March 8, 1946, Serial No. 653,091
13 Claims. (Cl. 235—87)

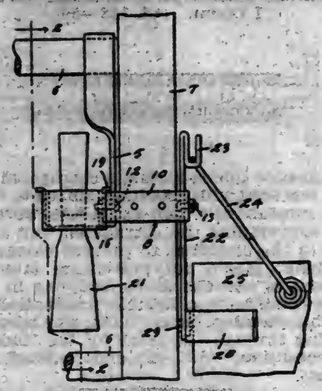




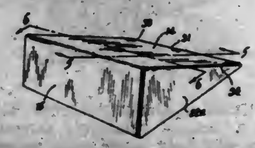
1. A calculator comprising a case including a top plate having a transverse window forming slot therein, a precalculated scale mounted in the case and having a transverse row of figures in register with the window, a plurality of longitudinal, normally closed shutters slidably mounted in the case over the scale in position so that opening of each shutter exposes a corresponding figure of the scale to view, a keyboard on the case, the keys of said key board having indicia associated therewith corresponding to the figures of the scale, and operating connections between the keys and shutters; a number of different keys corresponding to the same figure of the scale, and the operating connections coupling said different keys to the one shutter for said same figure.

2,444,984
STABILIZED LECITHIN
William J. Fitzpatrick, Chicago, Ill., assignor to The W. J. Fitzpatrick Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application July 21, 1943, Serial No. 495,627
2 Claims. (Cl. 99—15)

1. A stabilized lecithin product of high emulsifying power adapted to remain free from rancidity for long periods of time consisting essentially of finely divided granules of water soluble food material, each having a thin film of lecithin thereon to form a dry free-pouring powder free from any tendency to cake or pack and having intimately admixed therewith and uniformly distributed therethrough, a non-toxic slightly alkaline substance in finely powdered form, the lecithin being approximately 4% by weight of the total mixture and the non-toxic slightly alkaline substance being approximately ½% to 1% by weight of the total mixture, the mixture having a pH of at least 4.5



2,444,985
FUEL BURNER
Weston M. Fulton, Knoxville, Tenn., assignor to W. J. Savage Company, Inc., Knoxville, Tenn., a corporation of Tennessee
Application April 4, 1944, Serial No. 529,593
16 Claims. (Cl. 110—35)



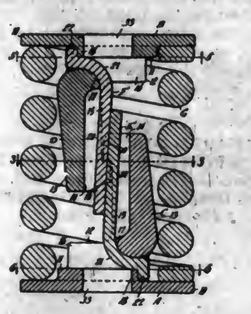
1. In a heater, an elongated tubular burner having a fuel inlet at one end thereof, means journaling one end of said burner for turning movement and including a universal joint supporting the burner for tilting movement, means journaling the opposite end portion of the burner, means mounting said last-mentioned journaling means for vertical adjustment and including a base, and means for adjusting said base vertically to different angular positions.

2,444,986
HOLDER FOR PAINT BUCKETS AND THE LIKE
William Charles Gebhardt, San Antonio, Tex.
Application August 10, 1945, Serial No. 610,103
4 Claims. (Cl. 248—210)

1. A paint bucket holder for ladders comprising a hook adapted for attaching to a rung of the ladder, a U-shaped member attached at one side to the lower portion of said hook, said U-shaped member being adapted to straddle a rail of the ladder and having an inner leg adapted to detachably support a tray, a vertically extending bar attached to the other, outer leg of said U-shaped member, a hook at the upper end of said bar adapted for engagement by the bail of a bucket and an arcuate plate at the lower end of said bar adapted to support the side of the bucket.

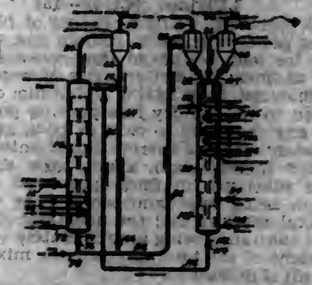
2,444,987
WEDGE-SHAPED DISPENSING CONTAINER FOR POWDERY SUBSTANCES
Norman D. Giessen, Lakewood, Ohio
Application October 18, 1943, Serial No. 506,719
7 Claims. (Cl. 229—22)

1. A container of the character described, comprising a generally rectangular bottom wall, a pair of generally upright side walls having downwardly and forwardly inclined top edges, a generally rectangular rear wall having an upwardly and forwardly inclined outer portion and a downwardly and rearwardly inclined inner portion, said side walls at their rear ends being substantially of the same height as that of said rear wall and being provided on their rear end edges with inturned wings clamped between the inner and



outer portions of said rear wall, the inner portion of said rear wall having a length greater than the vertical distance between its upper edge and the plane of said bottom wall, whereby the lower edge of said inner wall portion is frictionally held against forwardly movement, and a top wall extending rearwardly and upwardly from the front edge of the bottom wall to the top edge of said rear wall.

2,444,988
SAFETY DEVICE FOR FLEXIBLE TUBING
Stephen Guarnaschelli, Mount Vernon, N. Y., assignor to Packless Metal Products Corporation, New Rochelle, N. Y., a corporation of New York
Application October 14, 1943, Serial No. 506,145
1 Claim. (Cl. 138—59)

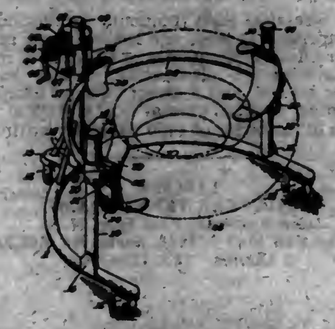


In a flexible tubing having a corrugated wall of ductile material with couplings affixed to its ends, and a substantially non-extensible woven wire jacket surrounding the corrugated wall and also affixed to the couplings to prevent elongation of the tubing; means for preventing lateral displacement of sections of the coupling in case of rupture comprising a flexible substantially non-extensible member longer than the wire jacket extending through the inside of the tubing in a loose condition, with its ends affixed to the couplings.

2,444,989
FRICTION SHOCK ABSORBER
Stacy B. Haseltine, La Grange, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application February 4, 1944, Serial No. 521,024
6 Claims. (Cl. 267—9)

1. In a friction shock absorber, the combination with a pair of relatively movable end followers; of relatively lengthwise movable friction spring plates inclined to the longitudinal axis of the mechanism and having sliding engagement with each other, said plates being rigidly fixed to said followers respectively and being flexed to place the same under tension; and lengthwise extending coil spring means having its opposite ends bearing on said followers to oppose relative movement of said followers together with said plates toward each other, the coils of said spring means at opposite ends thereof having lateral bearing engagement with said followers respectively at opposite sides of the device to resist relative displacement of said followers laterally in opposite directions and oppose lateral separation of said spring plates.

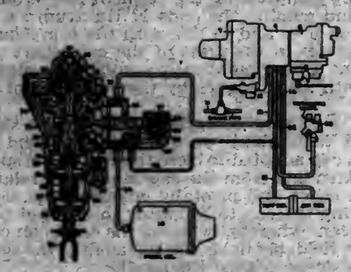
2,444,990
CONTACTING SOLID PARTICLES AND GASEOUS FLUIDS
Charles E. Hemminger, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application September 12, 1941, Serial No. 410,525
2 Claims. (Cl. 196—52)



1. A method of cracking hydrocarbons in the presence of powdered cracking catalyst which comprises introducing hydrocarbon vapors at cracking temperature into the bottom portion of a cracking zone and introducing powdered catalyst particles into the upper portion of said cracking zone wherein the flow of hydrocarbon vapors and catalyst particles is generally countercurrent, controlling the velocity of the vapors so that the catalyst particles are in a dry fluidised condition in said zone, removing solid dry particles from the bottom of said cracking zone and cracked vapors from the top of said cracking zone, the fluidized particles being maintained in a plurality of spaced beds arranged one above the other with a connecting confined vertical passageway between the beds so that the vapors flow upwardly through the beds to fluidize the solid catalyst particles therein and fluidized catalyst particles flow from a predetermined level of an upper bed to a lower bed through the vertical passageway and spent catalyst particles adjacent to the bottom portion of said cracking zone below the inlet for hydrocarbon vapors are heated by indirect heat exchange and stripped with a stripping gas.

2,444,991
FURNITURE
Edgar H. Hunter, Cambridge, Mass.
Application May 24, 1944, Serial No. 537,054
3 Claims. (Cl. 155—196)

1. A demountable chair having, in combination, a pair of vertical plate-like crossed supporting members each having upper curved generally horizontally and vertically extending seat and back supporting edges and having integrally formed thereon a back leg and a front leg, a pair of cooperating notches formed in said members which are interlocked to hold said members in said crossed position, a seat having a bottom surface conforming to the curvature of said seat supporting edges, a back rest having a rear surface conforming to the curvature of said back supporting edges, said rear surface being adapted to fit against the bottom surface of said seat, hinges connecting said back rest and seat at the junction of said rear surface and said bottom surface, and side elements on said back and said seat having abutting end edges when on said supporting members, said hinges being operable to swing said back and seat from the position in which said end edges abut to a position in which the rear surface of the back rest lies nested adjacent the under surface of the seat when said back and seat are removed from said supporting members.



2,444,992
PORTABLE DEVICE FOR AIRPLANE LANDING WHEELS
Howard S. Kittel, Fort Worth, Tex., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application November 20, 1943, Serial No. 511,027
9 Claims. (Cl. 214—1)

1. A portable wheel handling device comprising a wheel gripping assembly adapted to embrace substantially one-half of the wheel, a U-shaped frame having upright tubular posts at the outer ends thereof, means for mounting the assembly upon pivots movably mounted upon the posts, and means carried by the frame and including flexible elements extending through the posts and connected to the pivot mountings to simultaneously move said pivot mountings to raise and lower the assembly in the frame.

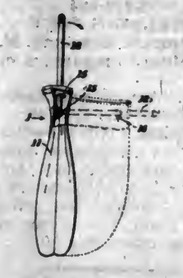
2,444,993
BRAKE CYLINDER RELEASE VALVE WITH RETAINER CONTROL
William F. Klein, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application March 24, 1947, Serial No. 736,726
8 Claims. (Cl. 303—70)

1. The combination of a brake controlling valve device having a brake cylinder connection and an exhaust connection; a retainer applied to said exhaust connection and settable to a retaining position in which it limits exhaust flow; a brake cylinder connected with said brake cylinder connection; a release valve interposed in the last named connection and having a normal position in which it opens the connection and an abnormal position in which it closes the connection and vents the brake cylinder; manually operable means for shifting said release valve to said abnormal position; resetting means responsive to exhaust flow through the brake controlling valve device and then serving to return the release valve to normal position; and means effective in the abnormal position of the release valve to suspend the exhaust limiting function of the retainer.

2,444,994
WELDING FLUX
Kenneth H. Koopman, Kenmore, N. Y., assignor to Haynes Stellite Company, a corporation of Indiana
No Drawing. Application June 16, 1945, Serial No. 599,900
3 Claims. (Cl. 148—26)

2. A welding flux containing substantially 5% to 15% sodium carbonate; 20% to 30% sodium sesquicarbonate; 6% to 12% sodium chloride; 5% to 10% calcium fluoride; the remainder essentially all borax glass, the borax glass being at least 45% but not exceeding 60%.

2,444,995
PIVOTED CLOSURE FOR COLLAPSIBLE TUBES
Clayton Laing, Chicago, Ill.
Application August 7, 1943, Serial No. 497,810
7 Claims. (Cl. 222—558)



1. In a closure comprising a spout, a resilient sleeve adapted to be fitted on and secured to the spout, a cap adapted to close the end of the spout, arms extending from the cap in opposed relation to each other and pivotally engaging the sleeve said sleeve presenting oppositely disposed trunnions and said cap having complementary opposed recesses adacent the ends of said arms; means for assembling said cap with said sleeve, before said sleeve is fitted on the spout, comprising converging channel walls extending from the edge of said arms of the cap toward the margin

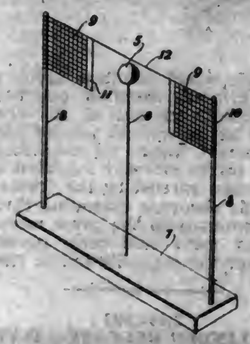
of said recesses permitting the cap to be positioned over the sleeve with the outer ends of said channel walls overlapping the ends of the trunnions on said sleeve whereby when the cap is forced down over the sleeve said channel walls impinge against the ends of said trunnions simultaneously compressing the resilient sleeve out of shape and guiding the ends of the trunnions to a position over and in line with the complementary recesses in the arms of the cap where said trunnions are automatically sprung into engagement with said recesses by the resilience of the sleeve.

6. In a closure comprising a spout, a sleeve adapted to be fitted on and rotate around the spout, a cap adapted to close the end of the spout, arms extending from the cap in opposed relation to each other and pivotally engaging the sleeve permitting the cap to be swung to an open position; means whereby swinging the cap to an open position yieldably holds the cap against the sleeve and the sleeve against the spout.

2,444,996
COMBINED HANDLE AND CLOSURE MEANS FOR FLEXIBLE RECEPTACLES
Edgar Lebenhart, New York, N. Y.
Application March 15, 1945, Serial No. 582,873
4 Claims. (Cl. 150—12)

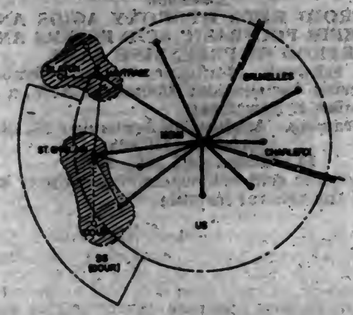
1. A receptacle having an expansible and contractible mouth portion, said receptacle comprising a rigid handle member provided with arms connected to one side of the receptacle near its mouth, the arms of said handle member being slidingly connected with the opposite side of the receptacle at points beneath the mouth portion more distant from the bottom of the receptacle than the distance at which said handle member arms are connected to the receptacle.

2,444,997
METHOD OF MAKING ELECTRIC CONTACT PLUGS
Horace Lovesey, London, England, assignor to Telephone Manufacturing Company Limited, London, England
Application April 2, 1946, Serial No. 659,022
In Great Britain April 13, 1945
1 Claim. (Cl. 18—59)



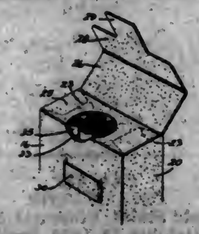
Method of manufacturing a contact plug of the type comprising a central rod terminating in a tip contact, an inner conductive sleeve surrounding said rod and terminating in a contact ring, and an outer conductive sleeve surrounding said inner sleeve and constituting a contact sleeve, said method including the steps of molding a short cylindrical insulator onto said rod of a diameter substantially equal to the inner diameter of said inner sleeve to provide a close friction fit therebetween, sliding said inner sleeve in place on said rod over said insulator to provide a sub-assembly of said rod and inner sleeve, positioning said sub-assembly and outer sleeve in place inside a mold, and injecting insulating plastic material into the mold to fill the annular voids between said rod and inner sleeve and between said inner and outer sleeves.

2,444,998
ROCHELLE SALT RESONATOR
Bernd Matthias, Zurich, Switzerland, assignor to "Patelhold" Patentverwertungs- & Elektro-Holding A.-G., Glarus, Switzerland
Application May 31, 1944, Serial No. 538,142
In Switzerland April 12, 1943
3 Claims. (Cl. 171—327)



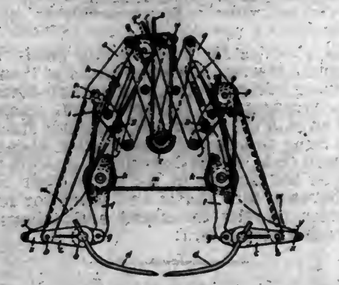
1. An electrical high frequency oscillation circuit comprising at least one Rochelle salt crystal for controlling the frequency of the circuit, means for impressing an alternating current voltage upon the crystal, and a direct current source for establishing in the crystal an electrical field strength of the order of 1400 volts per centimeter.

2,444,999
MINIATURE TENNIS GAME
John Natchuk, East Islip, N. Y.
Application May 2, 1946, Serial No. 666,750
2 Claims. (Cl. 273—30)



1. In a ball game, a base member, an elongated spring wire mounted in upright position adjacent the center of the base member and having a ball supported at the upper end thereof, a pair of standards mounted adjacent the two sides of the base member and a pair of nets supported from said standards a short distance from the two opposite sides of the ball, said spring wire being sufficiently strong to support the ball in upright position but being resilient enough to permit the ball to swing back and forth when in play.

2,445,000
RATE-BASED RESTRICTED SERVICE TELEPHONE SYSTEM
John Ellis Ostline, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., a corporation of Delaware
Original application June 12, 1939, Serial No. 278,728, now Patent No. 2,372,906, dated April 17, 1945. Divided and this application June 18, 1942, Serial No. 447,500. In Great Britain June 14, 1938
3 Claims. (Cl. 179—18)

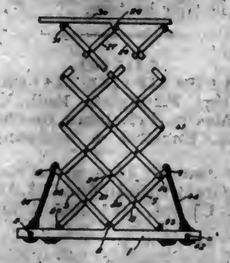


1. In a telephone system, a plurality of lines including both restricted and unrestricted lines, register equipment controllable over any of said calling lines during the extension of a connection to establish different charge rates for connections extended therefrom in accordance with the distances between calling and called lines, switching apparatus, and means controllable by said equipment for operating said switching apparatus to set up connections from calling unrestricted lines regardless of the charge rates established therefor by said equipment and for positively preventing operation of said switching apparatus to set up connections from different calling restricted lines in the event the charge rates established therefor by said equipment exceed a predetermined rate.

2,445,001
CIGARETTE CASE
William A. Penee, Adell, Wis., assignor to Enger-Kress Company, West Bend, Wis., a corporation of Wisconsin
Application November 24, 1944, Serial No. 564,924
4 Claims. (Cl. 206—41.2)

1. A cigarette case comprising the combination with a form-maintaining liner, rectangular in cross section and open at top and bottom, of a strip of soft leather having end portions folded upon itself with unfinished surfaces cemented together and having lateral extensions intermediate of its ends provided with marginal side and end flaps, the central portion of said strip of leather being folded about the open bottom of the liner and portions of said leather strip adjacent said central portion being upturned and cemented to the front and rear walls of the liner, one of the end portions of said strip being apertured and extended over the open upper end of the reenforcing liner and downwardly on its rear side and the other end portion of the strip normally overlapping the apertured end portion and detachably engaged with the front wall of the case, said lateral extensions of the strip being folded to covering positions over the side walls of the reenforcing member and cemented thereto with their marginal side flaps inturned and cemented to the inner surfaces of an upturned leather strip portion, and their lower end flaps inturned and cemented to the inner surfaces of the leather bottom.

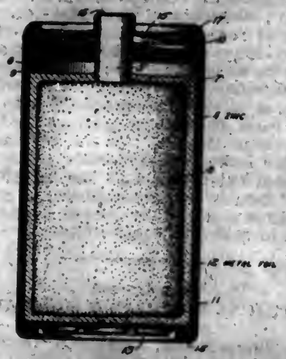
2,445,002
GRAB FOR LIFTING MATERIALS
Sydney Herbert Priestman, Hull, England, assignor to Messrs. Priestman Brothers Limited, Hull, York, England, a company of Great Britain
Application June 10, 1946, Serial No. 675,559½
In Great Britain June 23, 1945
3 Claims. (Cl. 294—112)



1. A grab of the lazy-tongs type comprising a lazy-tongs linkage with downwardly prolonged end link members, a pair of jaws and means pivotally connecting them to said downward prolongations of the end link members, additional links connected to each of such jaws and means providing a sliding connection for such additional links with elements of said lazy-tongs linkage, an opening rope and a closing rope, sheaves on such lazy-tongs linkage about which said opening rope passes, sheaves on said linkage and on said additional links about which said closing rope passes, extensions associated with said jaws beyond their pivotal connections to the downward prolongations of the end members of the lazy-tongs linkage, and flexible connections between said extensions and the lazy-tongs linkage, said flexible connections being of such length as to hold said jaws fully opened in the expanded position of said lazy-tongs linkage.

2,445,003
ELECTRICAL BRUSH FOR HIGH ALTITUDE OPERATION
Dimiter Ramadanoff, Cleveland, Ohio, assignor to National Carbon Company, Inc., a corporation of New York
No Drawing. Application June 23, 1943, Serial No. 491,911
10 Claims. (Cl. 171—325)

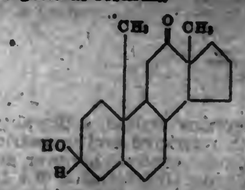
1. Electrical contact brush comprising material selected from the group consisting of carbon and mixtures of carbon with metal, and minor



proportions of a material acting to prolong the life of such brush in operation under atmospheric conditions low in moisture and oxygen pressure, said last-mentioned material being a member of the group consisting of non-deliquescent salts of and oxides of the alkaline earth metals.

2,445,004
ELEVATING PLATFORM TRUCK
Frank M. Reynolds and Delmar R. Conrad, San Gabriel, Calif.
Application April 25, 1945, Serial No. 590,172
4 Claims. (Cl. 187—9)

1. In a device for transporting goods, a base platform, a storage platform, series of frames intermediate said platforms combining to form a lazy tongs arrangement therebetween, transverse shafts on said base platform, threaded stems vertically hung to swing on said shafts, elements in the outer ends of the lowermost of said frames riding on the threads of the stems, gear connections between said shafts and stems for rotating the latter thereby to extend and collapse said lazy tongs arrangement.



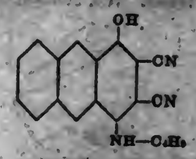
2,445,005
LEAKPROOF DRY CELL
Rupert J. Schmeltzer, Madison, Wis., assignor to Ray-O-Vac Company, a corporation of Wisconsin
Application September 6, 1945, Serial No. 614,691
4 Claims. (Cl. 136—133)

1. A leak-proof dry-cell having a cup shaped metal electrode and a centrally disposed carbon electrode, comprising: an electrically non-conductive shell lined with metal foil and having its marginal end portions turned inwardly about said metal electrode; a metal bottom closure of less diameter than the exterior of said shell and having its marginal portions bent to grip the lower marginal end portions of said shell so as to make a liquid tight joint therewith and maintain electrical contact with the metal foil; and a top closure of less diameter than the exterior of the shell, said closure having an exposed metal terminal in contact with the carbon electrode and making a liquid-tight joint with the upper portion of said shell.

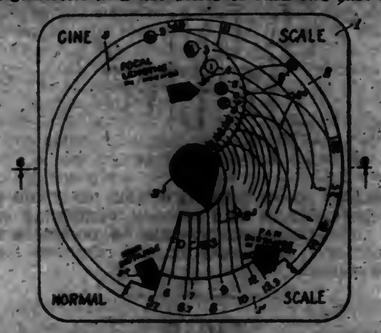
2,445,006
STEROID KETO HYDROXY ACIDS AND THEIR POLYBASIC ACID ESTERS AND METHOD OF PREPARING SAME
Erwin Schwenk, Montclair, N. J., assignor to Schering Corporation, Bloomfield, N. J., a corporation of New Jersey
No Drawing. Application September 26, 1942, Serial No. 459,823
15 Claims. (Cl. 260—397.1)

1. Succinic acid half-esters of a hydroxy keto-acid of the general formula

wherein Z is a radical of the group consisting of —COOH,



and



2,445,007
DYESTUFFS OF THE ANTHRAQUINONE SERIES
George W. Seymour, Victor S. Salvin, and Clarence E. Hiscerman, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application July 24, 1945, Serial No. 606,324
2 Claims. (Cl. 260—396)

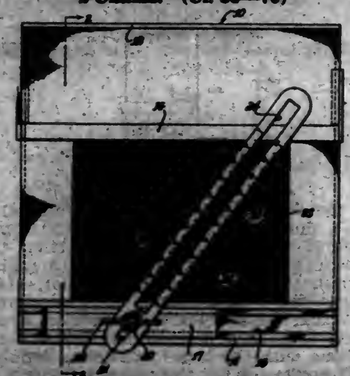
1. The anthraquinone dyestuff of the following formula:

2,445,008
CALCULATOR
Arnold Smidt, Elmhurst, N. Y.
Application October 29, 1946, Serial No. 706,463
9 Claims. (Cl. 235—64.7)

8. A calculator for determining proper relationship between focal lengths, aperture openings and depth-of-field, comprising at least three scale carriers and means for connecting said scale carriers for relative movement to each other, the first of said scale carriers having a scale of distances based on a predetermined circle of confusion, the second of said scale carriers having focal lines and a pointer determining one of the depth-of-field limits, and the third of said scale carriers having another pointer determining the other of the depth-of-field limits and a third pointer determining the focus distance, one of the two last mentioned scale carriers having aperture opening designations and the other of said two last mentioned scale carriers having focal length designations, said focus lines of said second scale carrier correlating said third pointer with the distance scale of said first scale carrier, whereby the proper setting of the aperture opening designations with the focal length scale the depth-of-field may be determined.

2,445,009
ELECTRIC FENCE POST AND INSULATOR
Harold E. Strauss and Albert Sisson, Falls City, Nebr.
Application September 27, 1946, Serial No. 699,706
5 Claims. (Cl. 174—45)

1. An electric fence insulator comprising a cylindrical body member having a slot formed in one end thereof to define a pair of projections, means for retaining a wire in said slot, a flattened neck member projecting axially from the other end of said body member, the width of said neck member being less than the diameter of said body member, and a circular head carried at the end of said neck member, said head being larger in diameter than the width of said neck member.

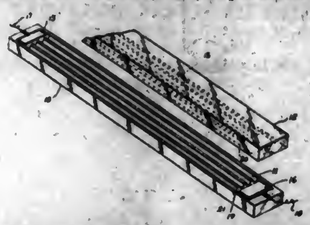


2,445,010
SCARIFYING AND INOCULATING NEEDLE
Lewis E. Thompson, Anson, Tex.
Application November 7, 1945, Serial No. 627,218
4 Claims. (Cl. 128—283)

1. An inoculating needle for dispensing vaccine directly from a vaccine containing bottle comprising a hollow tubular shank of uniform diameter throughout its entire length adapted to enter the bottle through its neck and to extend well into the bottle toward the bottom thereof, a point at one end of the shank adapted to protrude from the neck of the bottle to puncture the skin of an animal to be inoculated, said shank having

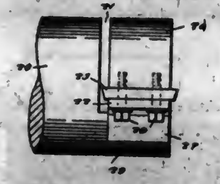
a plurality of longitudinally spaced vaccine admitting openings near the end opposite the point through which the contents of the bottle may enter the needle and said needle also having a single vaccine discharge opening at its junction with the point.

2,445,011
APPARATUS FOR ANALYZING DATA ON CARDS
Allan A. Twichell, Bethany, Conn.
Application September 30, 1946, Serial No. 556,662
2 Claims. (Cl. 23—76)



1. In a device for analysis of data upon cards or similar record forms, means providing relatively adjustable substantially parallel walls for supporting a group of cards with an edge of each lying in substantially the same plane, an indicia bearing percentage scale pivotally mounted on one of said walls and adjustable for registration of two of its indicia with remote cards of said group along a line extending transversely over the edges of all cards in said group.

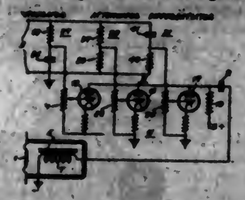
2,445,012
LUMINOUS ELECTRICAL DISCHARGE DEVICE
Clarence H. Van Orden, Newark, N. J.
Application October 29, 1946, Serial No. 706,295
4 Claims. (Cl. 176—122)



1. A luminous electrical discharge device having a closed low-pressure gas chamber compris-

ing at least two longitudinal sections of transparent di-electric material secured together in face-to-face relationship, the inner face of at least one of said sections being provided with a channel adjacent each end and being provided along an intermediate portion of its length with at least two longitudinally-extending channels communicating at their ends with said end channels and defining in cooperation with the

inner face of another section at least two gas-receiving passageways, the inner faces of said sections being sealed together in their longitudinal regions of contact between said passageways to isolate said passageways from each other and prevent diffusion of gas therebetween transversely of the gas chamber, and an electrode mounted in each of said end channels for applying an electrical potential to said device.

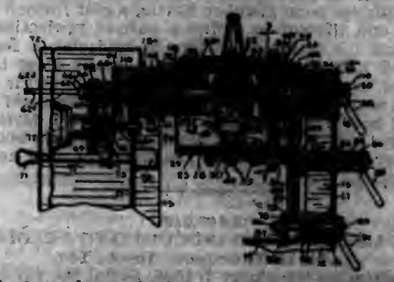


2,445,013
TOOLHOLDER
Christian G. Winkler, Portland, Oreg.
Application March 22, 1946, Serial No. 656,229
2 Claims. (Cl. 29—97.5)

1. A tool holder comprising a cylindrical bar having a slot extending longitudinally from an end thereof to define a hollow end portion, there being a transversely-extending slot in said bar and terminating in said longitudinal slot, said bar being provided with a second slot extending inwardly from its peripheral surface at a point continguous to said longitudinal slot and communicating with the latter, said slots defining a resilient gooseneck for the support thereon of a cutting tool, and means for securing said cutting tool on said gooseneck.

2,445,014
VIBRATORY MECHANICAL SYSTEM
Irving Wolff, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1943, Serial No. 512,153
12 Claims. (Cl. 318—9)

12. The method of driving a vibratory mechanical system having mass, stiffness, and mechanical resistance alternately from one position to another with a velocity which varies square wave fashion between a substantially constant positive value and an equal substantially constant negative value, comprising the steps of producing separately a force component directly proportional to the product of said resistance and said velocity, a second force component bearing the same proportionality to the product of said stiffness and the time integral of said velocity, and a third force component bearing the same pro-



portionality to the product of said mass and the time derivative of said velocity, combining said force components algebraically to provide a resultant force, and applying said resultant force to said system.

2,445,015
HONING TOOL
Carl E. Beck, San Francisco, Calif.
Application March 25, 1946, Serial No. 656,857
6 Claims. (Cl. 51—184.3)

1. A honing tool comprising a mandrel having a head with a center bore therein, and a longitudinal slot in said mandrel open to said centerbore and having an inclined bottom portion; a bar slidable in said slot and having inclined portions slidable on said bottom; a hone supported on said bar, a vernier stop threaded on said head; a plunger slidable in said head and engaging said bar and having a stud extending through said slot; a plunger retractor slidable on said head and engaging said stud; and a spring in said center bore and bearing against said plunger, said vernier stop acting to limit the forward movement of said plunger retractor and cooperating therewith to regulate the extent of outward movement of the said bar and hone.

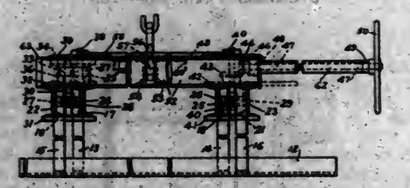
2,445,016
WORK MANIPULATOR
Harold P. Bentley, Syracuse, N. Y.
Application June 14, 1945, Serial No. 599,366
8 Claims. (Cl. 29—288)

1. A work manipulator of the class described comprising, in combination, a main frame, a support having a pair of hollow trunnions journaled in the main frame for tilting of the support relatively to the frame, a spindle journaled

in the support for rotation about an axis crossing and offset from the axis of tilting movement of the support, a work carrying head mounted centrally thereof on one end of the spindle, a drive shaft journaled in the support trunnions and extending axially through one of said trunnions to the exterior of the frame at one side of the frame, an electric motor mounted on and exteriorly of the main frame at said side of the frame, a driving train from said motor to said shaft for rotating the shaft, a worm mounted on said shaft to rotate with the shaft, a worm wheel in self-locking mesh with said worm and mounted on the spindle for relative rotation between the worm wheel and spindle, clutch means for connecting the worm wheel and spindle to rotate in unison, and actuating means for said clutch means extending to the exterior of the frame through the other one of said trunnions.

2,445,017
DEFLECTING CIRCUIT FOR CATHODE-RAY TUBES
Ronald Dean Beadle and Ian Alistair Hood, Sydney, Australia, assignors to Amalgamated Wireless (Australasia) Limited, Sydney, Australia, a company of Australia
Application April 12, 1946, Serial No. 661,490
In Australia September 14, 1945
6 Claims. (Cl. 315—27)

1. In a beam deflecting circuit for cathode ray apparatus, an arrangement for accurately maintaining electrical centering of a cathode ray beam throughout a wide variation in beam sweep length and sweep repetition frequency, comprising an arrangement including an electron discharge device having an anode, a cathode and at least one intervening grid electrode, means for connecting said anode to the positive terminal of a source of potential through an impedance unit, said cathode being connected to the negative terminal of the source of potential and to said positive terminal through a resistive network, and a pair of beam deflecting coils and a device of unilateral conductivity serially connected between said anode and an intermediate point on said resistive network.

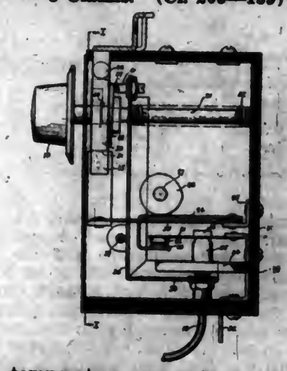


2,445,018
SEALING UNIT
Francis E. Brady, Jr., Muncie, Ind.
Application October 10, 1945, Serial No. 621,437
2 Claims. (Cl. 286—11)

1. A self-contained sealing unit for sealing a shaft and bearing having relative rotation, including an elongated inner sealing ring through which the shaft is adapted to extend, each end thereof formed to provide a sealing surface, and having its inner surface tapered, a compressible shaft seal mounted within said sealing ring adapted to be wedged by the tapered inner surface thereof into gripping and sealing engagement with said shaft, a substantially cylindrical cartridge element surrounding said sealing ring in concentric spaced relation thereto to provide a lubricant chamber therebetween, an outer sealing ring having a sealing surface in running sealing engagement with each of the end sealing

surfaces of said inner sealing ring, a flexible end closure secured to each of said outer sealing rings and opposed ends of said cartridge element respectively to provide a flexible end wall for said lubricant chamber, and yielding means carried by said cartridge element to maintain said rings in running sealing engagement under pressure while permitting relative rotation therebetween.

2,445,019
GRAPPLE
Jack Breslav, New Haven, Conn.
Application October 10, 1945, Serial No. 621,412
1 Claim. (Cl. 294—67)



In a grapple, laterally spaced apart frame side beams, lengthwise spaced apart housings extending between and secured to said side beams, a pair of oppositely movable bars in each housing, a gear rack on each bar, a stock engaging member on the outer end of each bar, a first gear pinion in one housing in mesh with the gear racks on the bars in said housing, a second gear pinion in mesh with the first gear pinion, a shaft for the second gear pinion and extending upwardly therefrom, a sprocket on said pinion shaft, a third gear pinion in the other housing in mesh with the gear racks on the bars in said housing, a shaft for, and extending upwardly from, the third gear pinion, a sprocket on said last mentioned shaft, a chain running about and between said sprockets to drivingly connect them, spaced apart angle bars, each having one of its arms in under the chain between the sprockets and its other arm extending upwardly along side of and above said chain to prevent interference of overhead structure with the chain, and means to rotate one of said sprockets.

2,445,020
LOCKING DEVICE FOR INTERFITTING MEMBERS
Howard Spencer Charles, Toronto, Ontario, Canada, assignor of one-half to Henry Charles Morris, Toronto, Ontario, Canada
Application October 18, 1947, Serial No. 780,664
5 Claims. (Cl. 287—119)

1. A device of the class described comprising a first member having a bore, a second member having an end telescoped in said bore, a pin carried by said first member transversely projecting into said bore at a side thereof, said telescoped end being cut away at one side to provide a locking passage in which said pin is disposed, said locking passage extending longitudinally of said telescoped end and being formed with a stop shoulder at its forward end and a thrust shoulder at its rearward end, said telescoped end being formed with a flat opposite said locking passage, said flat extending forwardly from the extremity of said telescoped end and terminating in a stop face aligned with said stop shoulder, said flat providing a guide passage for said pin and communicating with said locking passage by means of a forwardly disposed groove receptive to said pin, and means yieldably urging said telescoped end outwardly so that said thrust shoulder is held in engagement with said pin.

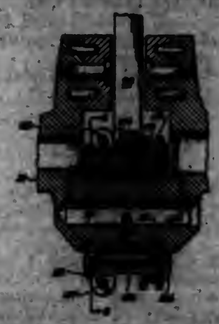
2,445,021
THERMOSTATIC SWITCH
Earl K. Clark, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 29, 1942, Serial No. 470,445
5 Claims. (Cl. 200—139)

1. A temperature-responsive control for an electric heating element comprising a movable contact-carrying arm, an adjustable contact-carrying member, cooperating movable and adjustable contacts carried by said arm and said member, respectively, said movable contact-carrying arm being biased in the direction to move the movable contact toward the adjustable contact, a rotating cam engaging said movable contact-carrying arm in the direction to move the movable contact away from the adjustable contact and operating to cyclically move said movable contact into and out of engagement with said adjustable contact, temperature-responsive means acting on said adjustable contact-carrying member to move the adjustable contact away from the movable contact in response to increase in temperature and toward the same in response to decrease in temperature, and manually-adjustable means for varying the position of said adjustable contact-carrying member in relation to temperature of said temperature-responsive means.

2,445,022
COMPUTING SCALE
Sol Colman, Los Angeles, Calif.
Application March 30, 1945, Serial No. 585,789
4 Claims. (Cl. 265—29)

1. In combination in computing scales: weight-movable means movable in accordance with the weight of an object being weighed; a pivot on said movable means; a metering arm mounted upon said pivot and bodily movable with said movable means, said arm being adjustable about said pivot to positions angularly disposed with respect to the direction of movement of said movable means; shiftable means on said movable means and adjustable in accordance with selected unit prices; a first guide roller carried by and projecting from said shiftable means; a first channel means carried by a portion of said metering arm and spaced from said pivot, said channel means receiving said guide roller to position said portion of said arm; movable unit-price means adjustable in accordance with unit price for adjusting said shiftable means; a second guide roller and a second channel means receiving said second roller and thereby operatively connecting said movable unit-price means with said shiftable means, whereby said shiftable means is positively moved in opposite directions by said movable unit-price means; and totaling means connected with said metering arm and actuable thereby upon movement of said weight-movable means.

2,445,023
EXTENSIBLE CONNECTOR
Henry F. Ebert, Brooklyn, N. Y.
Application May 9, 1947, Serial No. 747,062
5 Claims. (Cl. 24—71)



1. An extensible connector comprising two flanged links connected by a resilient link having its ends pivoted in the flanges of said links, and having a projecting portion near a pivoted end thereof adapted to press against one of said flanged links when the parts are in folded position, a toothed member slidable in one of said flanged links and a lug on the flange of the other of said links adapted to engage the teeth of said toothed member and maintain them in adjusted positions.

2,445,024
WEFT CUTTER ON MULTISHUTTLE BOX LOOMS
Charles Florian, Hawthorne, N. J., assignor of sixty-five per cent to Infald Novelty Company, Paterson, N. J., a corporation of New Jersey
Application January 25, 1945, Serial No. 574,511
5 Claims. (Cl. 139—291)

1. A loom including supporting structure, means to advance, at constant rate and in synchrony, a warp proper and a flexible auxiliary warp-element spaced from and paralleling a margin of the warp proper and forming with the latter the warp of the fabric to be woven, means for repeatedly forming sheds in the warp during advance thereof, means to lay continuous primary filling through the sheds and form with the warp, spaced from each other lengthwise of the warp, woven wider zones all having their final filling stretches equally spaced apart by spaces narrower than said zones, means to lay continuous secondary filling through the sheds in the spaces between said wider zones and form other narrower woven zones, means to indicate filling failure each time filling is laid through a shed, and a cutter on said structure arranged to sever the filling portions connecting the warp proper and auxiliary warp element, said cutter being positioned completely forward of the last wider zone adjacent the fell, which has just been completely woven, a sufficient distance so that the filling from the second named filling laying means remains intact until said last named means has laid at least the initial filling through the sheds forming a part of the next succeeding narrower zone.

2,445,025
CRANK-PIN BEARING
Edwin M. Fisk, Mission San Jose, Calif.
Original application May 19, 1941, Serial No. 394,007. Divided and this application November 15, 1943, Serial No. 510,336
3 Claims. (Cl. 74—630)

3. In combination with a crankpin having an annular bearing groove therearound and arranged for connection with a plurality of connecting rods having terminal bearing slippers and providing an annular bearing groove therearound, a bearing sleeve fittedly floating in said crankpin groove and extending outwardly from the groove and providing an exterior bearing groove for the complementary engagement therein and circumferentially therearound of the bearing slippers of the different connecting rods, said sleeve comprising radially separable sections rabbeted together at their opposed edges and positively and releasably fixed together in the crankpin groove by pins extending axially through their rabbets outwardly of the crankpin groove and inwardly of the sleeve groove.

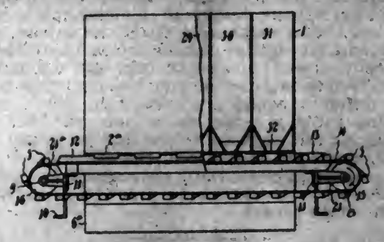
RIVET INSERTING TOOL
Louis Frank, Fellows, Calif.
Application May 15, 1945, Serial No. 593,833
3 Claims. (Cl. 78—46)



1. In a tool for inserting rivets, screws and the like, a tube, a spring pressed plunger arranged for sliding movement in said tube, a rivet supporting flange located within the discharge end of said tube and provided with a notch for the accommodation of the shanks of rivets and the like, there being an opening in the wall of said tube just above the notch in said flange for the discharge of the heads of rivets from said tube, there being openings formed in the tubes to the sides of the first mentioned opening, a ring mounted for longitudinal adjustment on the lower portion of said tube, spring pressed arms pivoted on said ring and fingers projecting from the lower ends of said arms through said last mentioned openings for engaging between the head of the lowermost rivet and the end of the shank of the next adjacent rivet the length of said last mentioned openings being substantially greater than the thickness of said fingers in order to permit the latter to be adjusted to different positions lengthwise of said openings.

GRIT BLENDING AND SPREADING MACHINE
Charles A. Fritch, Brantford, Ontario, Canada
Application September 28, 1944, Serial No. 556,248
14 Claims. (Cl. 91—43)

1. In a grit blending and spreading machine, a hopper, open at its bottom; a distributing table extending beneath the open bottom of the hopper

said table having a discontinuous plane top surface; scrapers; and means for continuously mov-

ing said scrapers along and over the top surface of the table to scrape off the table grit which has fallen on the table from the hopper.

METHOD OF DISPERSING KERATIN PROTEINS WITH AMIDES AND THE COMPOSITION RESULTING THEREFROM

Chase B. Jones, Waltham, Mass., and Dale K. Mecham, Richmond, Calif., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Original application November 7, 1944, Serial No. 562,326. Divided and this application May 8, 1947, Serial No. 746,848

6 Claims. (Cl. 106—155)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The process comprising heating a keratin material in an essentially neutral aqueous solution containing a sulfur-containing, reductive disulphide-splitting agent and a member of the group consisting of urea, thiourea, formamide, acetamide, and urethane at a temperature up to about 100° C. to disperse said keratin material in said solution.

6. A composition of matter consisting essentially of a dispersion of a keratin material in an essentially neutral aqueous solution containing sodium bisulfite and urea.

METHOD OF DISPERSING KERATIN PROTEIN WITH AMMONIUM THIOCYANATE AND THE COMPOSITION RESULTING THEREFROM

Chase B. Jones, Waltham, Mass., and Dale K. Mecham, Richmond, Calif., assignors to United States of America as represented by the Secretary of Agriculture

No Drawing. Original application November 7, 1944, Serial No. 562,326. Divided and this application May 8, 1947, Serial No. 746,850

4 Claims. (Cl. 106—155)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The process comprising heating a keratin material in an essentially neutral aqueous solution containing a sulfur-containing, reductive disulphide-splitting agent and ammonium thiocyanate at a temperature up to about 100° C. to disperse said keratin material in said solution.

2. The process comprising heating a keratin material in an essentially neutral aqueous solution containing monoethylene thioglycol and ammonium thiocyanate at a temperature up to about 100° C. to disperse said keratin material in said solution.

MATTRESS TURNER

Moses Joseph Mendelbaum, New York, N. Y.

Application September 23, 1946, Serial No. 700,113

6 Claims. (Cl. 5—323)

5. A device for facilitating the reversal of a mattress, in combination: means adapted for attaching the mattress to a box spring whereby it may be pivoted thereon on one edge thereof; a frame surrounding the mattress; means detachably connected to the frame and mattress whereby the mattress may be pivoted in the frame so as to be reversed end for end or side for side; and means for supporting the frame in proper position while the mattress is being reversed.

REMOTE RADIO TUNING CONTROL SYSTEM

Eugene F. McDonald, Jr., Winnetka, Ill.

Application December 10, 1942, Serial No. 468,478

14 Claims. (Cl. 250—20)

10. A control system for controlling a radio receiver in a vehicle, comprising means operable by the foot of the vehicle driver for adjusting the volume of output of said receiver, means located elsewhere at a point remote from the first-mentioned means in said vehicle for adjusting the volume of output of said receiver, and means responsive to an adjustment of one of said adjusting means for transferring permanent control over adjustment of said output volume between said two adjusting means.
